

FC-GRAPHICS4MESH Matlab toolbox, User's Guide *

François Cuvelier[†]

October 30, 2017

Abstract

This Matlab toolbox allows to display simplicial meshes or datas on simplicial meshes. A simplicial mesh must be given by two arrays : the vertices array and the connectivity array.

1 Introduction

The **experimental** Matlab toolbox uses internal functions for displaying simplicial meshes or datas on simplicial meshes. Simplicial meshes could be:

- a triangular mesh in dimension 2, made with 2-simplices (ie. triangles),
- a tetrahedral mesh in dimension 3, made with 3-simplices (ie. tetrahedron),
- a triangular mesh in dimension 3 (surface mesh), made with 2-simplices,
- a line mesh in dimension 2 or 3 made with 1-simplices (ie. lines).

A simplicial mesh is given by its vertices array `q` and its connectivity array `me`. For demonstration purpose, some simplicial meshes are given in this package. They can be load by using the function `getMesh2D`, `getMesh3D` or `getMesh3Ds` of the `fc_graphics4mesh` package.

This toolbox was tested under

Windows 10: with Matlab R2015b to R2017b (opengl hardware mode with NVIDIA driver 376.84 on a Quadro K600)

MacOS Sierra: with Matlab R2015b to R2017b (opengl hardware mode with Intel driver 10.2.37 on a HD 3000)

Ubuntu 14.04.5 LTS: with Matlab R2017a, R2016b

Ubuntu 16.04 LTS: with Matlab R2015b, R2017b (opengl hardware mode), R2016a to R2017a (opengl software mode)

2 Installation

2.1 Installation automatic, all in one (recommanded)

For this method, one just have to get/download the install file

```
mfc_graphics4mesh_install.m
```

or get it on the dedicated web page. Thereafter, one run it under Matlab. This command download, extract and configure the `fc-graphics4mesh` and the required `fc-tools` toolbox in the current directory.

For example, to install this toolbox in `~/Matlab/toolboxes` directory, one have to copy the file `mfc_graphics4mesh_install.m` in the `~/Matlab/toolboxes` directory. Then in a Matlab terminal run the following commands

```
>> cd ~/Matlab/toolboxes
>> mfc_graphics4mesh_install
```

There is the output of the `mfc_graphics4mesh_install` command on a Linux computer:

```
1- Downloading and extracting the toolboxes
  -> <fc-tools>[0.0.18] ... OK
  -> <fc-graphics4mesh>[0.0.1] ... OK
2- Setting the <fc-graphics4mesh> toolbox
Write in ...
  ~/Matlab/toolboxes/fc-graphics4mesh-full/fc_graphics4mesh-0.0.1/configure_loc.m ...
  ...
  -> done
3- Using the <fc-graphics4mesh> toolbox
Under Matlab:
  addpath('~/Matlab/toolboxes/fc-graphics4mesh-full/fc_graphics4mesh-0.0.1')
  fc_graphics4mesh.init()

See ~/Matlab/toolboxes/mfc_graphics4mesh_set.m
```

The complete toolbox (i.e. with all the other needed toolboxes) is stored in the directory `~/Matlab/toolboxes/fc-graphics4mesh-full` and, for each Matlab session, one have to set the toolbox by:

```
>> ...
  addpath('~/Matlab/toolboxes/fc-graphics4mesh-full/mfc-graphics4mesh-0.0.1')
>> fc_graphics4mesh.init()
```

For **uninstalling**, one just have to delete directory

```
~/Matlab/toolboxes/fc-graphics4mesh-full
```

2.2 Manual installation

This package uses the `fc_tools` toolbox. So one has to install it as explain in the dedicated web page.

Thereafter, on the `fc_graphics4mesh` dedicated web page, one can found link to archives (*zip*, *7z* or *tar.gz* format)

- Downloads an archive and extract it on a folder, for example `~/Matlab/toolboxes`. The toolbox path is `~/Matlab/toolboxes/mfc-graphics4mesh-0.0.1`
- Adds the toolbox path in Matlab with `addpath` command.
- Verifies that the the `fc_tools` toolbox is in the Matlab path. Otherwise, adds it...

3 Mesh

The functions `getMesh2D`, `getMesh3D` and `getMesh3Ds` return a mesh vertices array `q`, a mesh elements connectivity array associated with the input argument `d` (simplex dimension) and the indices array `toGlobal`. The vertices array `q` is a *dim*-by- n_q array where *dim* is the space dimension (2 or 3) and n_q the number of vertices. The connectivity array `me` is a $(d + 1)$ -by- n_{me} array where n_{me} is the number of mesh elements and $0 \leq d \leq dim$ is the simplicial dimension:

- $d = 0$: points,
- $d = 1$: lines,
- $d = 2$: triangle,
- $d = 3$: tetrahedron.

So we can use these functions to obtain

- 3D mesh: `getMesh3D(3)` (*main* mesh), `getMesh3D(2)`, `getMesh3D(1)`, `getMesh3D(0)`,
- 3D surface mesh: `getMesh3Ds(2)` (*main* mesh), `getMesh3Ds(1)`, `getMesh3Ds(0)`,
- 2D mesh: `getMesh2D(2)` (*main* mesh), `getMesh2D(1)`, `getMesh2D(0)`.

For example,

- `[q3,me3,toGlobal3]=fc_graphics4mesh.getMesh3D(3)` return a 3-simplicial mesh (main mesh) in space dimension $dim = 3$,
- `[q2,me2,toGlobal2]=fc_graphics4mesh.getMesh3D(2)` return a 2-simplicial mesh in space dimension $dim = 3$.

The third output are indices of the vertices in the *main* mesh:

`q3(:,toGlobal2) == q2`

4 PLOTMESH function

The function `PLOTMESH` displays a mesh given by

Syntaxe

```
fc_graphics4mesh.plotmesh(q,me)
fc_graphics4mesh.plotmesh(q,me,Name,Value,...)
```

Description

`plotmesh(q,me)` displays all the d -dimensional simplices elements.

`plotmesh(q,me,Name,Value,...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- `'color'` : to specify the color of the displayed mesh elements. (default : 'blue'),
- `'cutPlan'` : (only for simplices in dimension 3) cut mesh by n plans given by n -by-4 array P where the equation of the i -th cut plan is given by

$$P(i,1)x + P(i,2)y + P(i,3)z + P(i,4) = 0.$$

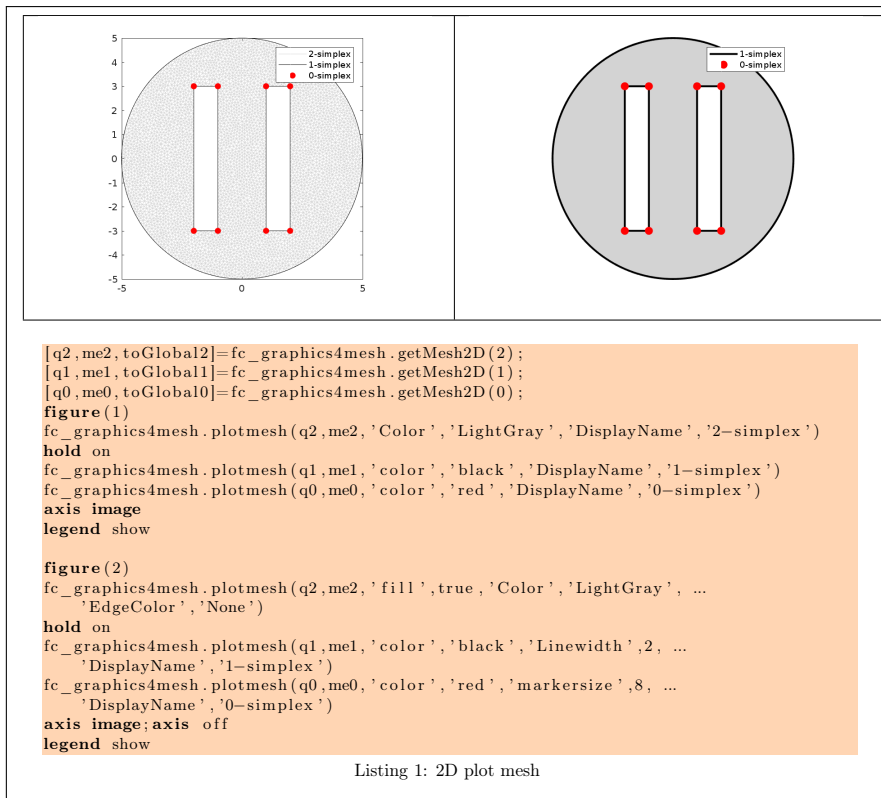

The normal vector $P(i,1 : 3)$ pointed to the part of the mesh not displayed. default : `[]` (no cut).

The options of second level depend on the type of elementary mesh elements to represent.

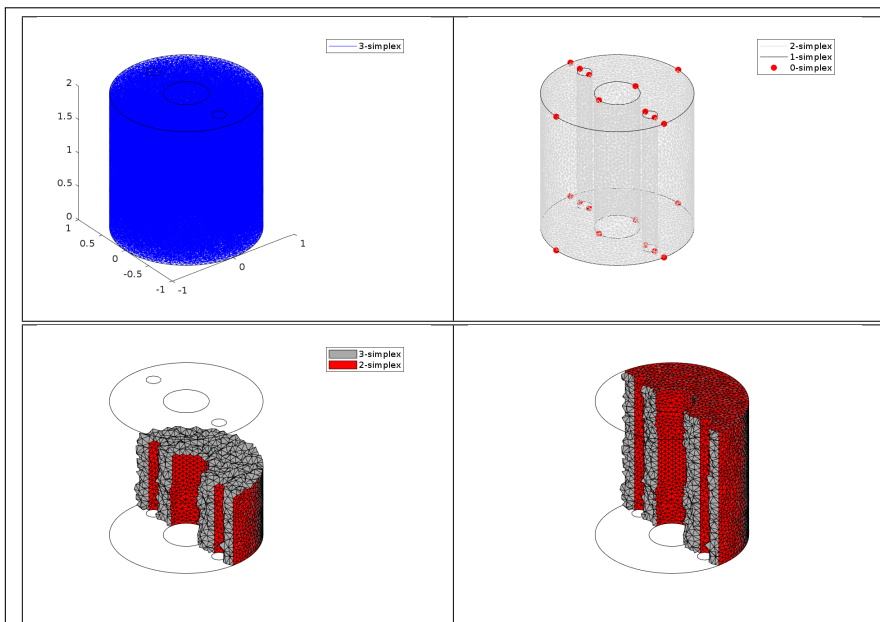

One can use any option of the following functions according to the type of d -simplex to be represented.

- In dimension 3,
 - if $d == 3$, **patch** function is used,
 - if $d == 2$, **trimesh** function is used,
 - if $d == 1$, **plot3** function is used,
 - if $d == 0$, **plot3** function is used,
- In dimension 2,
 - if $d == 2$, **trimesh** or **patch** function is used,
 - if $d == 1$, **plot** function is used,
 - if $d == 0$, **plot** function is used,
- In dimension 1,
 - if $d == 1$, **line** function is used,
 - if $d == 0$, **plot** function is used,

Listing 2: 3D plot mesh

3D surface example

5 PLOT function

The function `PLOT` displays data on a mesh given by its vertices array `q` and its connectivity array `me`.

Syntax

```

fc_graphics4mesh.plot(q,me,u)
fc_graphics4mesh.plot(q,me,u,Name,Value,...)

```

Description

`plot(q,me,u)` displays data `u` on a simplicial mesh. The data `u` can be an handle function or an array.

`plot(q,me,u,Name,Value,...)` specifies function options using one or more Name, Value pair arguments. Options of first level are

- `'cutPlan'` : (only for simplices in dimension 3) cut mesh by n plans given by n -by-4 array P where the equation of the i -th cut plan is given by

$$P(i,1)x + P(i,2)y + P(i,3)z + P(i,4) = 0.$$

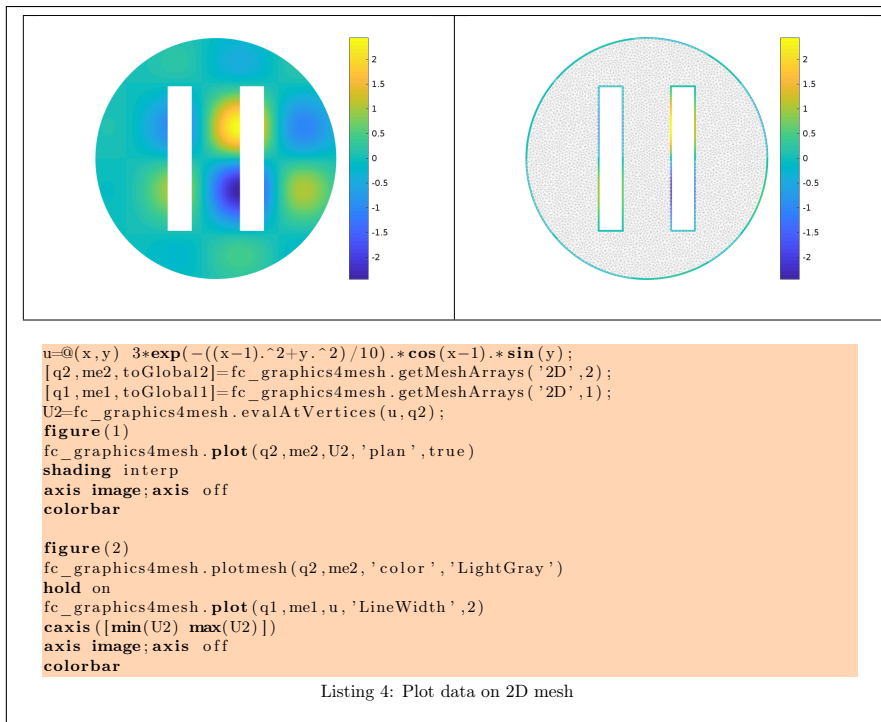

The normal vector $P(i, 1 : 3)$ pointed to the part of the mesh not displayed. default : `||` (no cut).

The options of second level depend on the type of elementary mesh elements to represent.

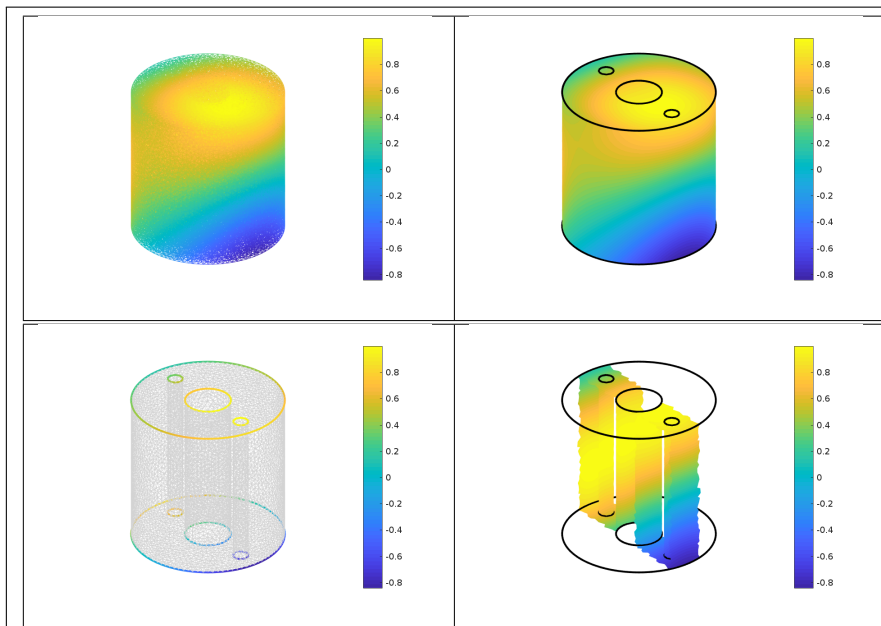

One can use any option of the following functions according to the type of d -simplex to be represented.

- In dimension 3, **patch** function is used.
- In dimension 2,
 - if $d == 2$, **surf** or **patch** (option 'plan' to true) function is used,
 - if $d == 1$, **patch** function is used,
- In dimension 1, **plot** function is used.

2D example

3D example

```

u=@(x,y,z) cos(x).*sin(y+z);
[q3,me3,toGlobal3]=fc_graphics4mesh.getMeshArrays('3D',3);
U3=fc_graphics4mesh.evalAtVertices(u,q3);
[q2,me2,toGlobal2]=fc_graphics4mesh.getMeshArrays('3D',2);
[q1,me1,toGlobal1]=fc_graphics4mesh.getMeshArrays('3D',1);

```

Listing 5: Plot data on 3D mesh

3D surface example

6 PLOTISO function

The function `PLOT` displays isolines from datas on a 2-simplicial mesh given by its vertices array `q` and its connectivity array `me`.

Syntax

```

fc_graphics4mesh.plotiso(q,me,u)
fc_graphics4mesh.plotiso(q,me,u,Name,Value,...)

```

Description

`plotiso(q,me,u)` displays isolines from datas on the 2-simplicial mesh given by the vertices array `q` and the connectivity array `me`. The data `u` can be an

handle function or an array.

`plotiso(q,me,u,Name,Value, ...)` specifies function options using one or more Name,Value pair arguments. Options of first level are

- `'niso'` : to specify the number of isolines (default : 10)
- `'isorange'` : to specify the list of isovalues (default : empty)
- `'isocolorbar'` : if true, colorbar with isovalues is drawn (default : false)
- `'format'` : to specify the format of the isovalues on the colorbar (default : `'%g'`)
- `'plan'` : if true, (default : false)
- `'color'` : to specify one color for all isolines (default : empty)
- `'mouse'` : if true, display information on clicked isoline (default : true)

The options of second level are all options of

- `plot3` function in dimension 3 or in dimension 2 with `'plan'` set to false
- `plot` function in 2 with `'plan'` set to true

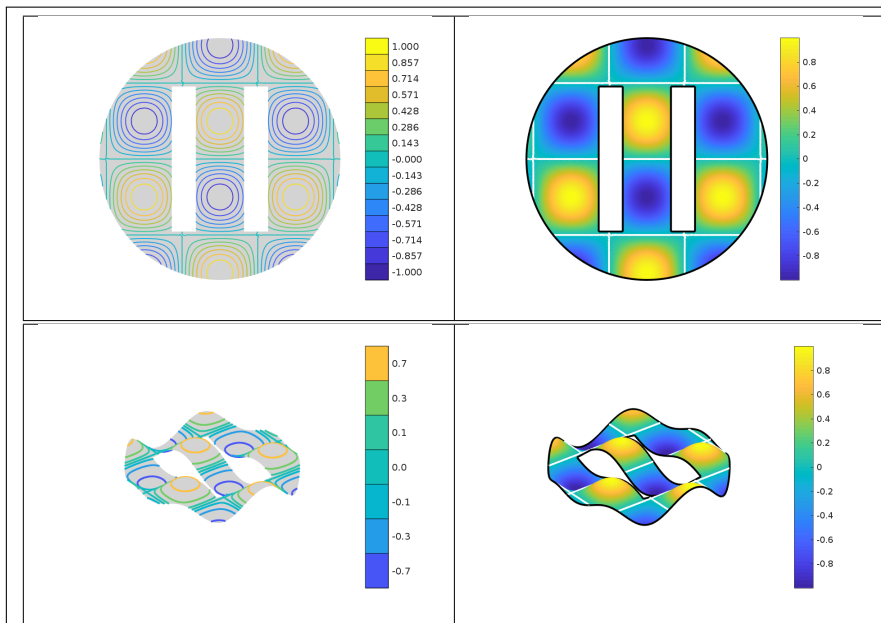

This function accepts until 3 output arguments :

bullet 1st output is the colors of the isolines

bullet 2nd output is the isovalues of the isolines

bullet 3th output is all the handles of the isolines as an 2D-array of dimension N-by-niso, where N is the number of 2-simplex elementary meshes where isolines are drawn.

2D example

```

u=@(x,y) cos(x).*sin(y);
[q2,me2,toGlobal2]=fc_graphics4mesh.getMesh2D(2);
[q1,me1,toGlobal1]=fc_graphics4mesh.getMesh2D(1);
U2=fc_graphics4mesh.evalAtVertices(u,q2);
U1=fc_graphics4mesh.evalAtVertices(u,q1);

figure(1)
fc_graphics4mesh.plotmesh(q2,me2,'color','LightGray','fill',true,...
    'EdgeColor','None','FaceColor','LightGray')
hold on
fc_graphics4mesh.plotiso(q2,me2,U2,'plan',true,...
    'niso',15,'isocolorbar',true,'format','%3f','LineWidth',1)
axis image;axis off

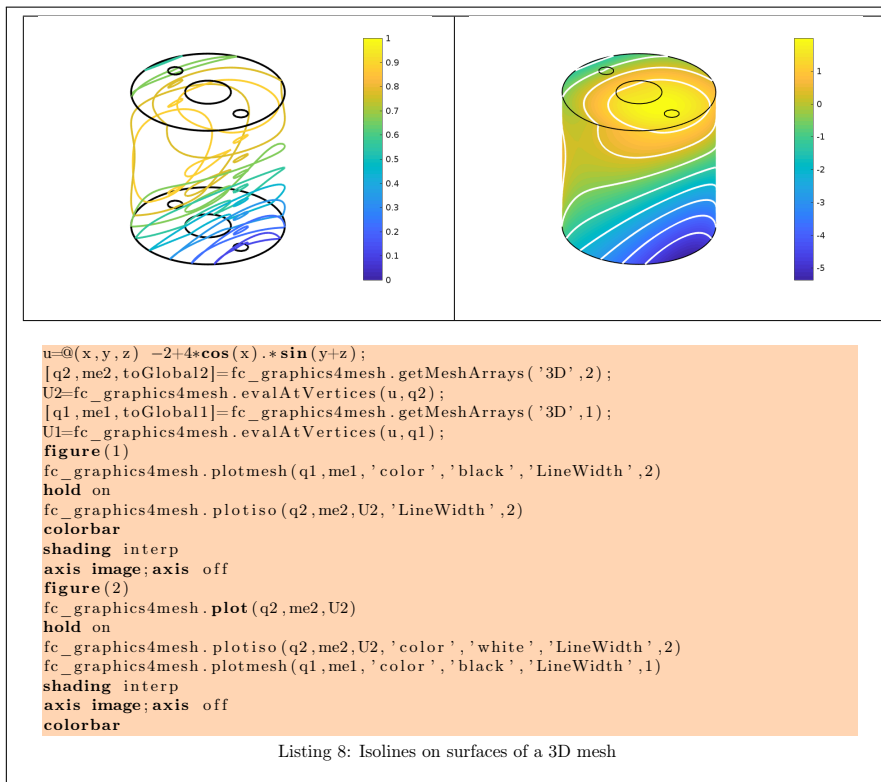

figure(2)
fc_graphics4mesh.plot(q2,me2,U2,'plan',true)
hold on
fc_graphics4mesh.plotiso(q2,me2,U2,'plan',true,...
    'Color','w','isorange',0,'LineWidth',2)
fc_graphics4mesh.plotmesh(q1,me1,'LineWidth',2,'Color','k')
colorbar
shading interp
axis image;axis off

figure(3)
fc_graphics4mesh.plotmesh(q2,me2,'z',U2,'fill',true,'Color','LightGray')

3D surface example

7 SLICEMESH function

The `SLICEMESH` function displays intersection of a plane and a 3D mesh given by its vertices array `q` and its connectivity array `me`.

Syntaxe

```

fc_graphics4mesh.slicemesh(q,me,P)
fc_graphics4mesh.slicemesh(q,me,P,Name,Value,...)

```

Description

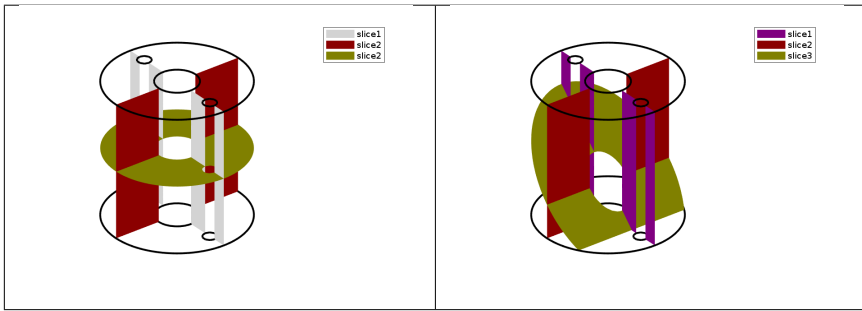

`slicemesh(q,me,P)` displays intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices elements given by `q` and `me` arrays. To compute `P` one can use the `fc_tools.graphics.PlaneCoefs` function of the `FC-TOOLS` toolbox. The 1-by-4 array `P`, is obtained with `P=fc_tools.graphicsPlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it. One can also used a n -by-4 array `P` where each line define a plane.

`slicemesh(q,me,P,Name,Value,...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- 'color' : to specify the slice color (default : 'LightGray', rgb=[0.9,0.9,0.9])

The options of second level are all options of the **patch** function except 'FaceColor' and 'EdgeColor'

3D example

```

[q3,me3,toGlobal3]=fc_graphics4mesh.getMeshArrays('3D',3);
[q1,me1,toGlobal1]=fc_graphics4mesh.getMeshArrays('3D',1);
figure(1)
P=fc_tools.graphics.PlaneCoefs([0 0 1],[1 0 0]);% ...
fc_graphics4mesh.slicemesh(q3,me3,P,'DisplayName','slice1')
hold on
P=fc_tools.graphics.PlaneCoefs([0 0 1],[0 1 0]);% ...
fc_graphics4mesh.slicemesh(q3,me3,P,'Color','DarkRed','DisplayName','slice2')
P=fc_tools.graphics.PlaneCoefs([0 0 1],[0 0 1]);% ...
fc_graphics4mesh.slicemesh(q3,me3,P,'Color','Olive','DisplayName','slice2')
fc_graphics4mesh.plotmesh(q1,me1,'color','k','LineWidth',2)
axis off; axis image
legend('show')
figure(2)
P=[fc_tools.graphics.PlaneCoefs([0 0 1/2],[1 0 0]); ...
fc_tools.graphics.PlaneCoefs([0 0 1/2],[0 1 0]); ...
fc_tools.graphics.PlaneCoefs([0 0 1/2],[0 -1 1])];
fc_graphics4mesh.slicemesh(q3,me3,P,'Color',{'Purple','DarkRed','Olive'}, ...
'DisplayName',{'slice1','slice2','slice3'})
hold on
fc_graphics4mesh.plotmesh(q1,me1,'color','k','LineWidth',2)
axis off; axis image
legend('show')

```

Listing 10: 3D mesh : slicemesh function

8 SLICE function

The **SLICE** function displays intersection of a plane and a 3D mesh given by its vertices array *q* and its connectivity array *me*.

Syntaxe

```
fc_graphics4mesh.slice(q,me,u,P)
fc_graphics4mesh.slice(q,me,u,P,Name,Value,...)
```

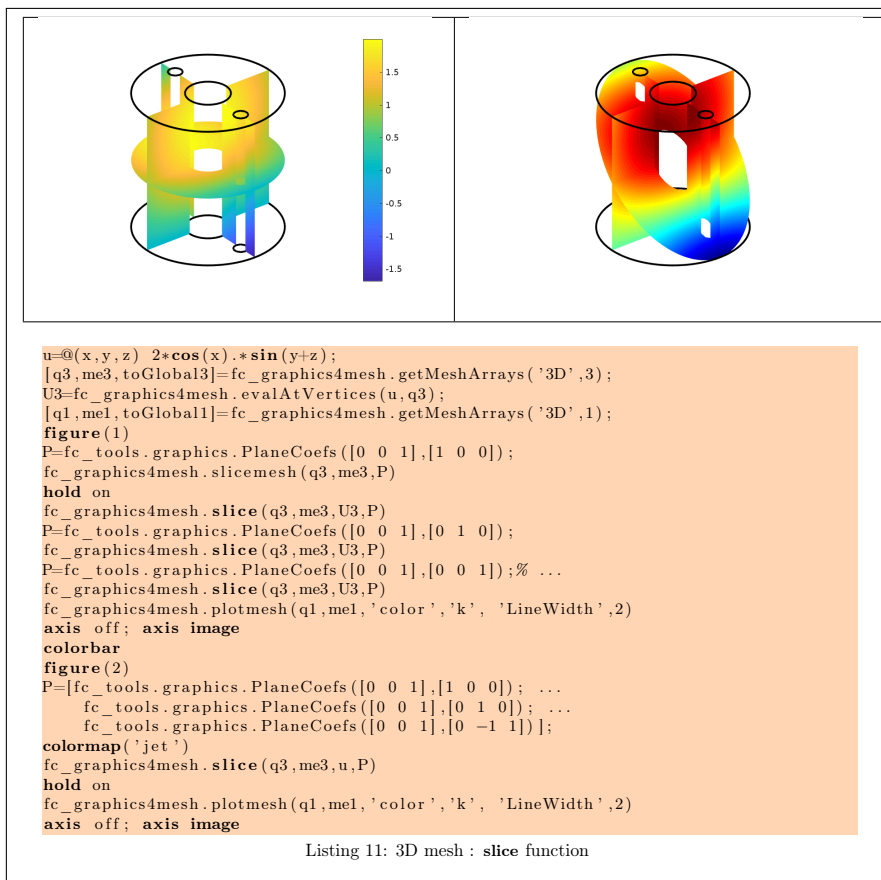

Description

slice(q,me,u,P) displays data on the intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices

elements given by q and me arrays. To compute P one can use the `fc_tools.graphics.PlaneCoefs` function of the **FC-TOOLS** toolbox. The array P , is obtained with `P=fc_tools.graphics.PlaneCoefs(Q,V)` where Q is a point in the plane and V is a vector orthogonal to it. One can also used a n -by-4 array P where each line define a plane.

`slice(q,me,u,P,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments which are those of the `patch` function excepts `'FaceColor'` and `'EdgeColor'`.

3D example

9 SLICEISO function

The `SLICEISO` function displays isolines of datas on the intersection of a plane and a 3D mesh given by its vertices array q and its connectivity array me .

Syntaxe

```
fc_graphics4mesh.sliceiso(q,me,u,P)
fc_graphics4mesh.sliceiso(q,me,u,P,Name,Value, ...)
```

Description

`sliceiso(q,me,u,P)` displays isolines of data u on the intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices elements given by q and me arrays. To compute P one can use the `fc_tools.graphics.PlaneCoefs` function of the **FC-TOOLS** toolbox. The 1-by-4 array P , is obtained with $P=fc_tools.graphics.PlaneCoefs(Q,V)$ where Q is a point in the plane and V is a vector orthogonal to it. One can also used a n -by-4 array P where each line define a plane.

`sliceiso(q,me,u,P,Name,Value, ...)` allows additional key/value pairs to be used when displaying u . The key strings could be

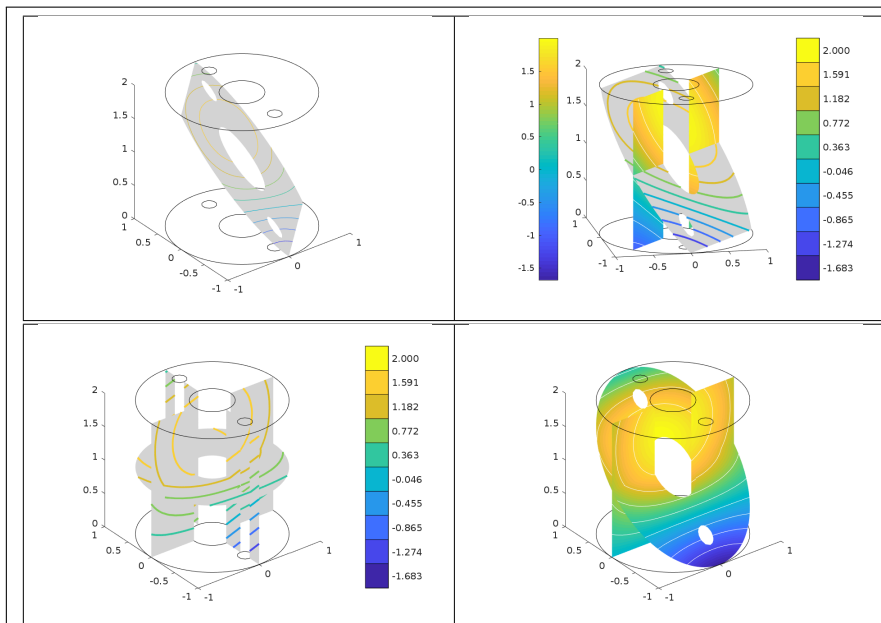

- `'niso'` : to specify the number of isolines (default : 10)
- `'isorange'` : to specify the list of isovalues (default : empty)
- `'color'` : to specify one color for all isolines (default : empty)
- `'isocolorbar'` : if true display a colorbar.Default is false.
- `'format'` : to specify the format of the isovalues print in the colorbar. Default is `'%g'`.
- `'mouse'` : if true, display information on clicked isoline (default : true)

For key strings, one could also used any options of the `plot3` function.

This function accepts until 4 output arguments :

- 1st output is the colors of the isolines
- 2nd output is the isovalues of the isolines
- 3th output is the handle of the colobar iso.
- 4th output is all the handles of the isolines as an 2D-array of dimension N -by- $niso$, where N is the number of elementary meshes where isolines are drawn.

3D example

```

u=@(x,y,z) 2*cos(x).*sin(y+z);
[q3,me3,toGlobal3]=fc_graphics4mesh.getMeshArrays('3D',3);

```

Listing 12: 3D mesh : sliceiso function

10 `PLOTQUIVER` function

The function `PLOTQUIVER` displays vector field datas on a mesh given by its vertices array `q` and its connectivity array `me`.

Syntax

```
fc_graphics4mesh.plotquiver(q,me,V)
fc_graphics4mesh.plotquiver(q,me,V,Name,Value, ...)
```

Description

`plotquiver(q,me,V)` displays vector field `u` on a simplicial mesh. The vector field data `u` can be a 1-by-dim cell arrays of handle functions or a dim-by- n_q array.

`plotquiver(q,me,V,Name,Value, ...)` specifies function options using one or more Name,Value pair arguments. Options of first level are

- `'freq'` : quiver frequencie, (default : 1)
- `'scale'` : quiver scale, (default is `fc_graphics4mesh.getCharacteristicLength(q)/20`)
- `'color'` : set one color for all quivers (default: default color of the `quiver` or `quiver3` functions). Cannot be used with `'colordata'` option.
- `'colordata'` : each quiver is colored with a 1-by- n_q array or a handle function (it will evaluated in all vertices) (default : empty).

The options of second level depend on the type of mesh elements to represent.

One can use any option of the following functions according to the type of d -simplex to be represented.

- In dimension 3 and with empty `'colordata'` , the `quiver3` function is used.
- In dimension 2 and with empty `'colordata'` , the `quiver` function is used.
- In dimension 2 or 3 and with no empty `'colordata'`, the third party `fc_tools.graphics.vfield3.vfield3` function is used.

2D example

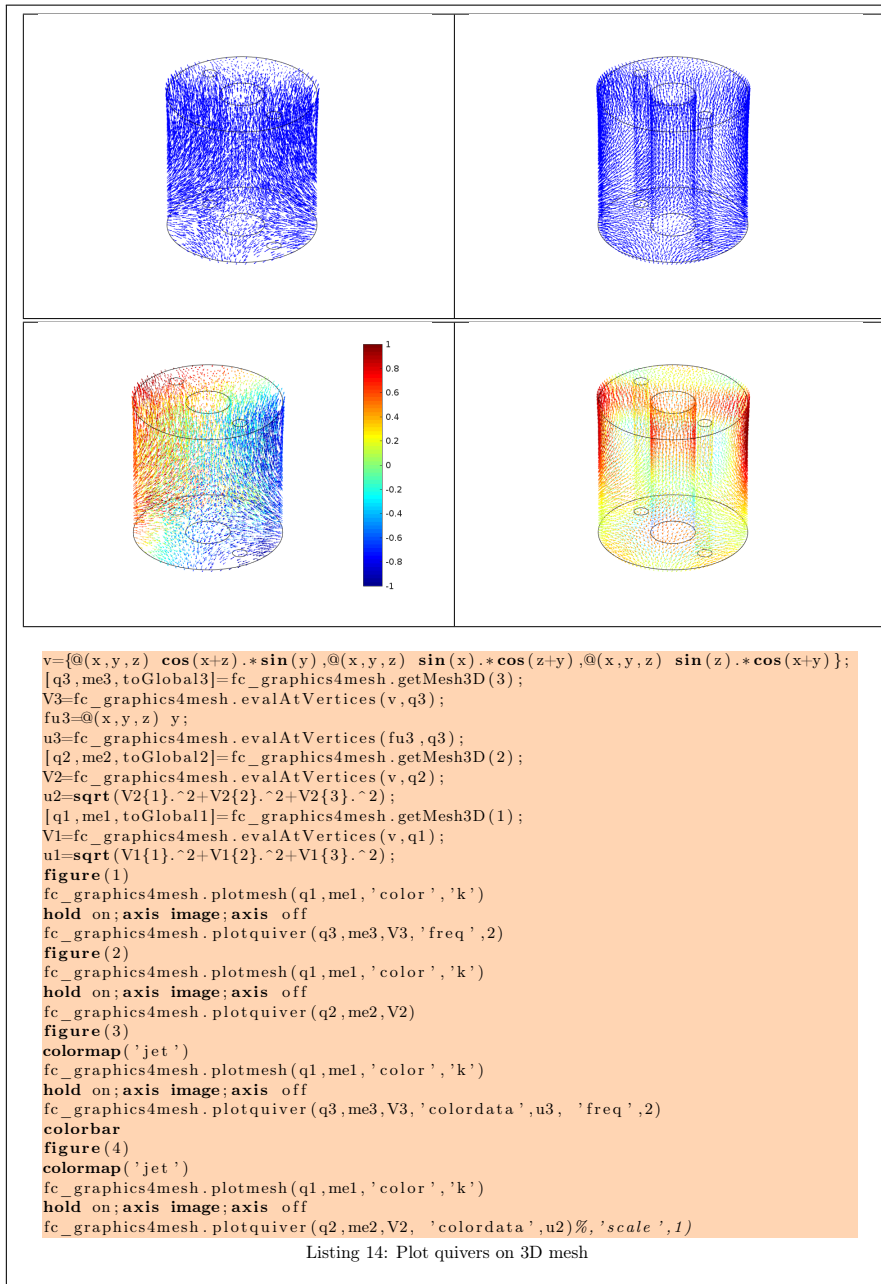

```

v=@(x,y) y.*sqrt(x.^2+y.^2),@(x,y) -x.*sqrt(x.^2+y.^2)};
vv=@(x,y) x/5,@(x,y) y/5};
[q2,me2,toGlobal2]=fc_graphics4mesh.getMesh2D(2);
V2=fc_graphics4mesh.evalAtVertices(v,q2);
