

fc-graphics4mesh Matlab toolbox, User's Guide*

version 0.1.7

François Cuvelier[†]

January 30, 2025

Abstract

This Matlab toolbox allows to display simplicial meshes or datas on simplicial meshes. A simplicial mesh must be given by two arrays : the vertices array and the connectivity array.

1 Introduction

The **experimental** Matlab toolbox uses internal functions for displaying simplicial meshes or datas on simplicial meshes. Simplicial meshes could be:

- a triangular mesh in dimension 2, made with 2-simplices (ie. triangles),
- a tetrahedral mesh in dimension 3, made with 3-simplices (ie. tetrahedron),
- a triangular mesh in dimension 3 (surface mesh), made with 2-simplices,
- a line mesh in dimension 2 or 3 made with 1-simplices (ie. lines).

A simplicial mesh is given by its vertices array `q` and its connectivity array `me`. For demonstration purpose, some simplicial meshes are given in this package. They can be load by using the function `getMesh2D`, `getMesh3D` or `getMesh3Ds` of the `fc_graphics4mesh` package.

2 Installation

to do ...

3 Mesh

The functions `getMesh2D`, `getMesh3D` and `getMesh3Ds` return a mesh vertices array `q`, a mesh elements connectivity array associated with the input argument `d` (simplex dimension) and the indices array `toGlobal`. The vertices array `q` is a dim -by- n_q array where dim is the space dimension (2 or 3) and n_q the number of vertices. The connectivity array `me` is a $(d+1)$ -by- n_{me} array where n_{me} is the number of mesh elements and $0 \leq d \leq dim$ is the simplicial dimension:

- $d = 0$: points,
- $d = 1$: lines,
- $d = 2$: triangle,
- $d = 3$: tetrahedron.

So we can use theses functions to obtain

- 3D mesh: `getMesh3D(3)` (*main* mesh), `getMesh3D(2)`, `getMesh3D(1)`, `getMesh3D(0)`,
- 3D surface mesh: `getMesh3Ds(2)` (*main* mesh), `getMesh3Ds(1)` , `getMesh3Ds(0)`,
- 2D mesh: `getMesh2D(2)` (*main* mesh), `getMesh2D(1)`, `getMesh2D(0)`.

For example,

- `[q3,me3,toGlobal3]=fc_meshtools.simplicial.getMesh3D(3)` return a 3-simplicial mesh (*main* mesh) in space dimension $dim = 3$,
- `[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMesh3D(2)` return a 2-simplicial mesh in space dimension $dim = 3$.

The third output are indices of the vertices in the *main* mesh:

`q3(:,toGlobal2) == q2`

4 `fc_graphics4mesh.plotmesh` function

The function `fc_graphics4mesh.plotmesh` displays a mesh given by

Syntaxe

```
fc_graphics4mesh.plotmesh(q,me)
fc_graphics4mesh.plotmesh(q,me,Name,Value, ...)
```

Description

`plotmesh(q,me)` displays all the `Th.d`-dimensional simplices elements.

`plotmesh(q,me,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- `'color'` : to specify the color of the displayed mesh elements. (default : `'blue'`),
- `'cutPlane'` : (only for simplices in dimension 3) cut mesh by n planes given by n -by-4 array P where the equation of the i -th cut plane is given by

$$P(i,1)x + P(i,2)y + P(i,3)z + P(i,4) = 0.$$

The normal vector $P(i,1:3)$ pointed to the part of the mesh not displayed. default : `[]` (no cut).

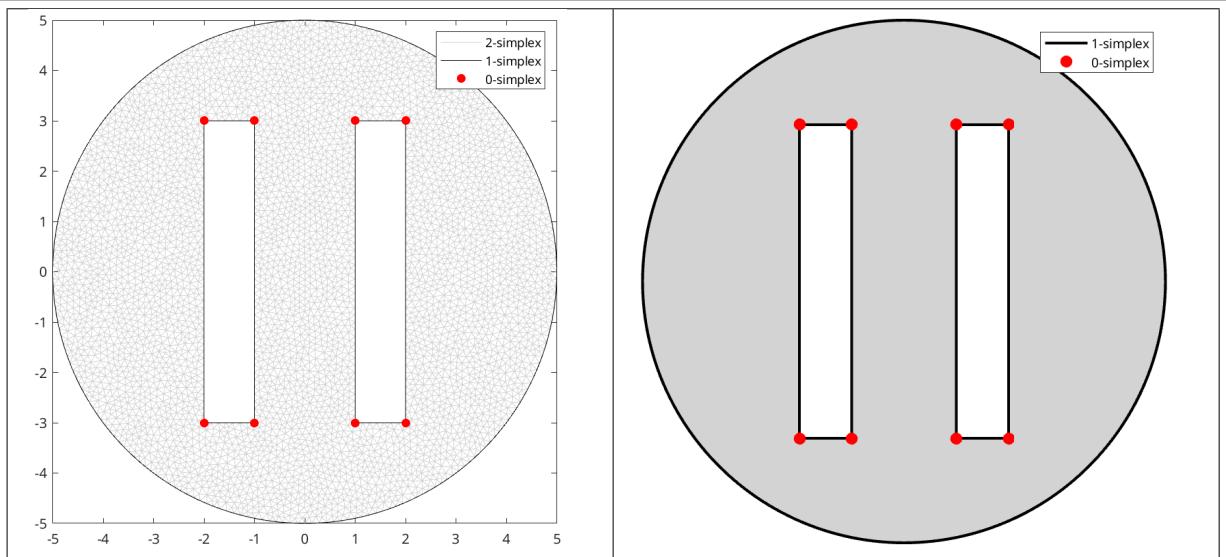

- `'inLegend'` : to add this mesh in a legend if `true`. Default is `false`.
- `'DisplayName'` : to specify the name used in a legend for this mesh. Then the (`'inLegend'`) option is forced to `true`.

The options of second level depend on the type of elementaries mesh elements to represent.

One can use any option of the following functions according to the type of d -simplex to be represented.

- In dimension 3,
 - if $d == 3$, `patch` function is used,
 - if $d == 2$, `trimesh` function is used,
 - if $d == 1$, `plot3` function is used,
 - if $d == 0$, `plot3` function is used,
- In dimension 2,
 - if $d == 2$, `trimesh` or `patch` function is used,
 - if $d == 1$, `plot` function is used,
 - if $d == 0$, `plot` function is used,
- In dimension 1,
 - if $d == 1$, `line` function is used,
 - if $d == 0$, `plot` function is used,

2D example : the following code is part of the `fc_graphics4mesh.demos.plotmesh2D` function.

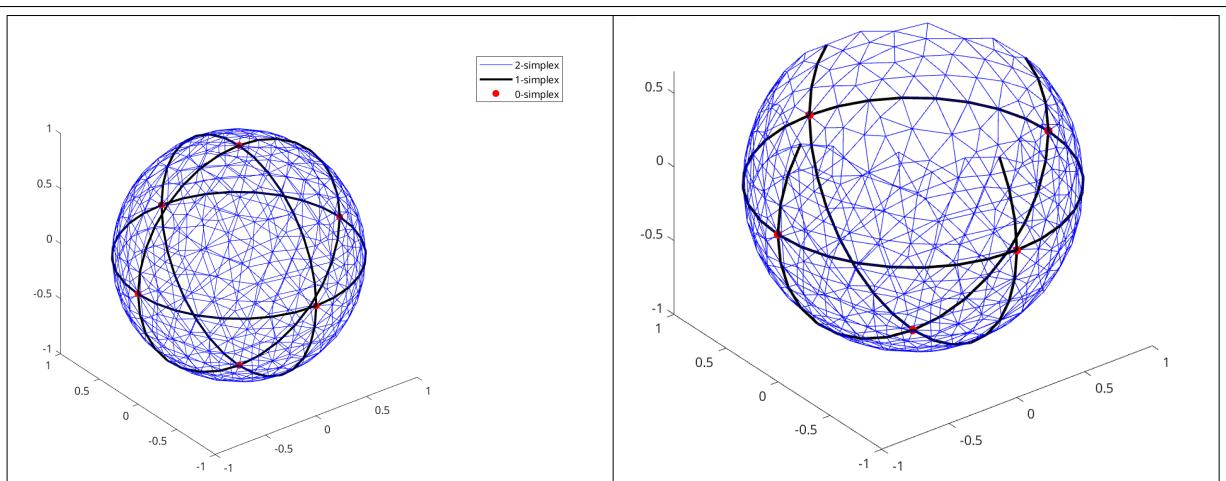

```
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMesh2D(2);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMesh2D(1);
[q0,me0,toGlobal0]=fc_meshtools.simplicial.getMesh2D(0);

```

Listing 3: Using `fc_graphics4mesh.plotmesh` function with a 3D mesh

5 fc_graphics4mesh.plot function

The function `fc_graphics4mesh.plot` displays data on a mesh given by its vertices array `q` and its connectivity array `me`.

Syntax

```
fc_graphics4mesh.plot(q,me,u)
fc_graphics4mesh.plot(q,me,u,Name,Value, ...)
```

Description

`plot(q,me,u)` displays data `u` on a simplicial mesh. The data `u` can be an handle function or an array.

`plot(q,me,u,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- `'cutPlane'` : (only for simplices in dimension 3) cut mesh by n planes given by n -by-4 array P where the equation of the i -th cut plane is given by

$$P(i,1)x + P(i,2)y + P(i,3)z + P(i,4) = 0.$$

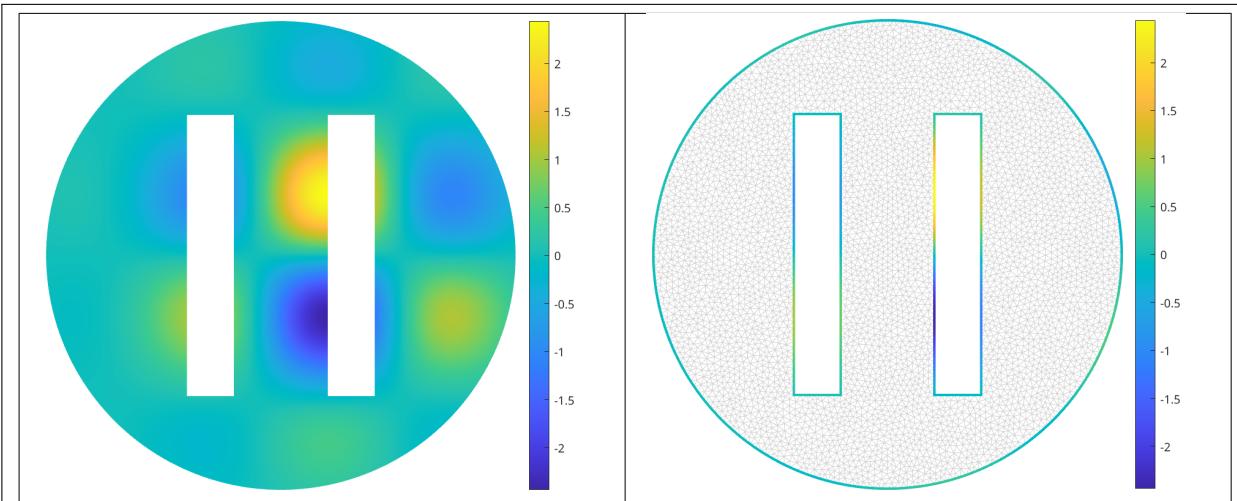

The normal vector $P(i,1:3)$ pointed to the part of the mesh not displayed. default : [] (no cut).

The options of second level depend on the type of elementaries mesh elements to represent.

One can use any option of the following functions according to the type of d -simplex to be represented.

- In dimension 3, `patch` function is used.
- In dimension 2,
 - if $d == 2$, `surf` or `patch` (option `'plane'` to `true`) function is used,
 - if $d == 1$, `patch` function is used,
- In dimension 1, `plot` function is used.

2D example : the following code is part of the `fc_graphics4mesh.demos.plot2D` function.

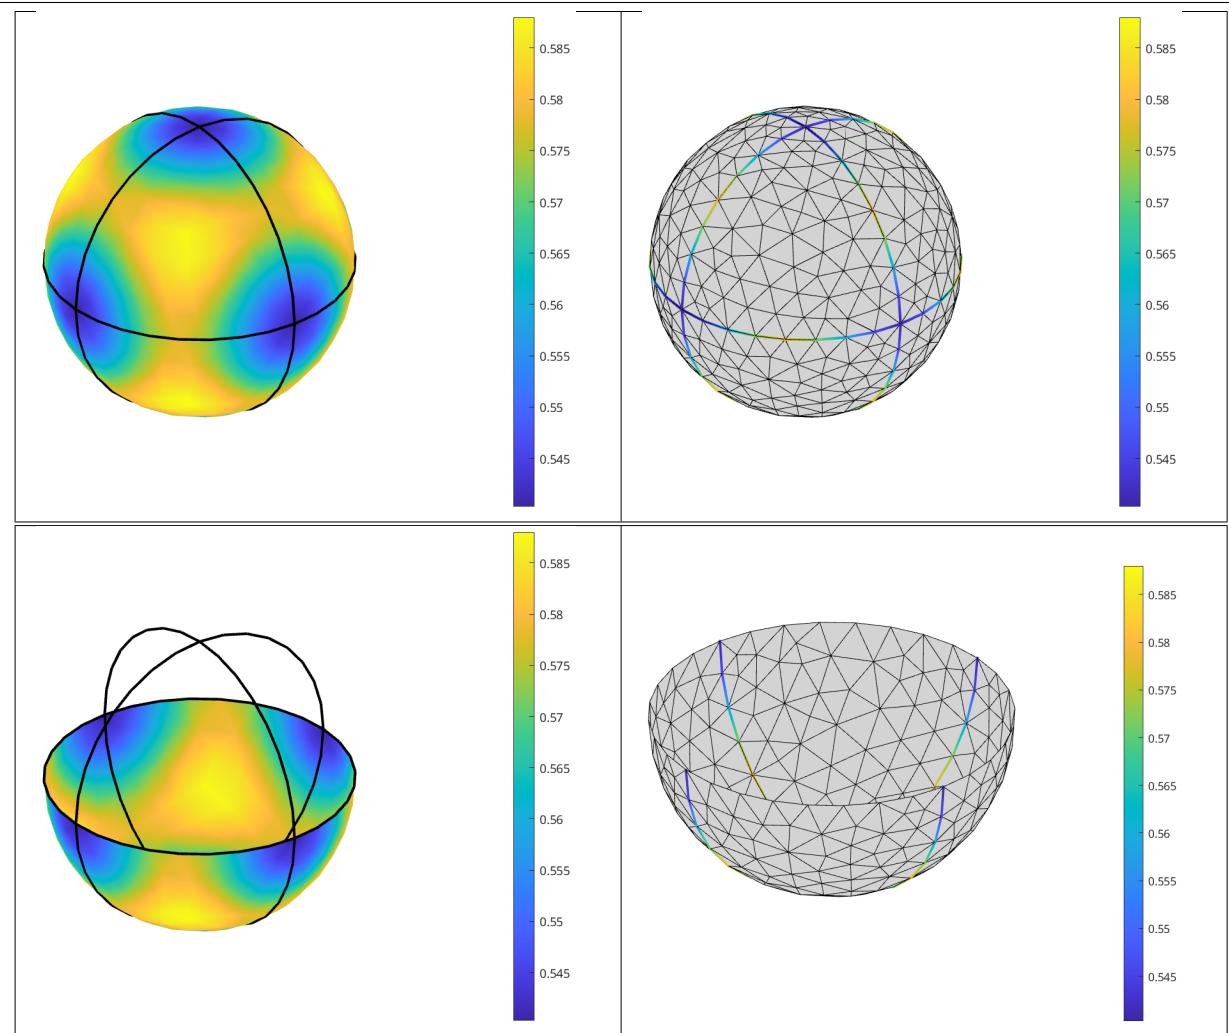

```
u=@(x,y) 3*exp(-((x-1).^2+y.^2)/10).*cos(x-1).*sin(y);
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('2D',1);
U2=fc_meshtools.eval(u,q2);

```

Listing 6: Using `fc_graphics4mesh.plot` function with a 3D mesh

6 fc_graphics4mesh.plotiso function

The function `fc_graphics4mesh.plot` displays isolines from datas on a 2-simplicial mesh given by its vertices array `q` and its connectivity array `me`.

Syntax

```
fc_graphics4mesh.plotiso(q,me,u)
fc_graphics4mesh.plotiso(q,me,u,Name,Value, ...)
```

Description

`plotiso(q,me,u)` displays isolines from datas on the 2-simplicial mesh given by the vertices array `q` and the connectivity array `me`. The data `u` can be an handle function or an array.

`plotiso(q,me,u,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- `'niso'` : to specify the number of isolines (default : 10)
- `'isorange'` : to specify the list of isovalues (default : empty)
- `'isocolorbar'` : if `true`, colorbar with isovalues is drawn (default : `false`)
- `'format'` : to specify the format of the isovalues on the colorbar (default : `'%g'`)
- `'plane'` : if true, isolines are in the xy -plane, otherwise isolines are in 3D with z -value set to `u` (default : `false`)
- `'color'` : to specify one color for all isolines (default : empty)
- `'mouse'` : if `true`, display information on clicked isoline (default : `true`)

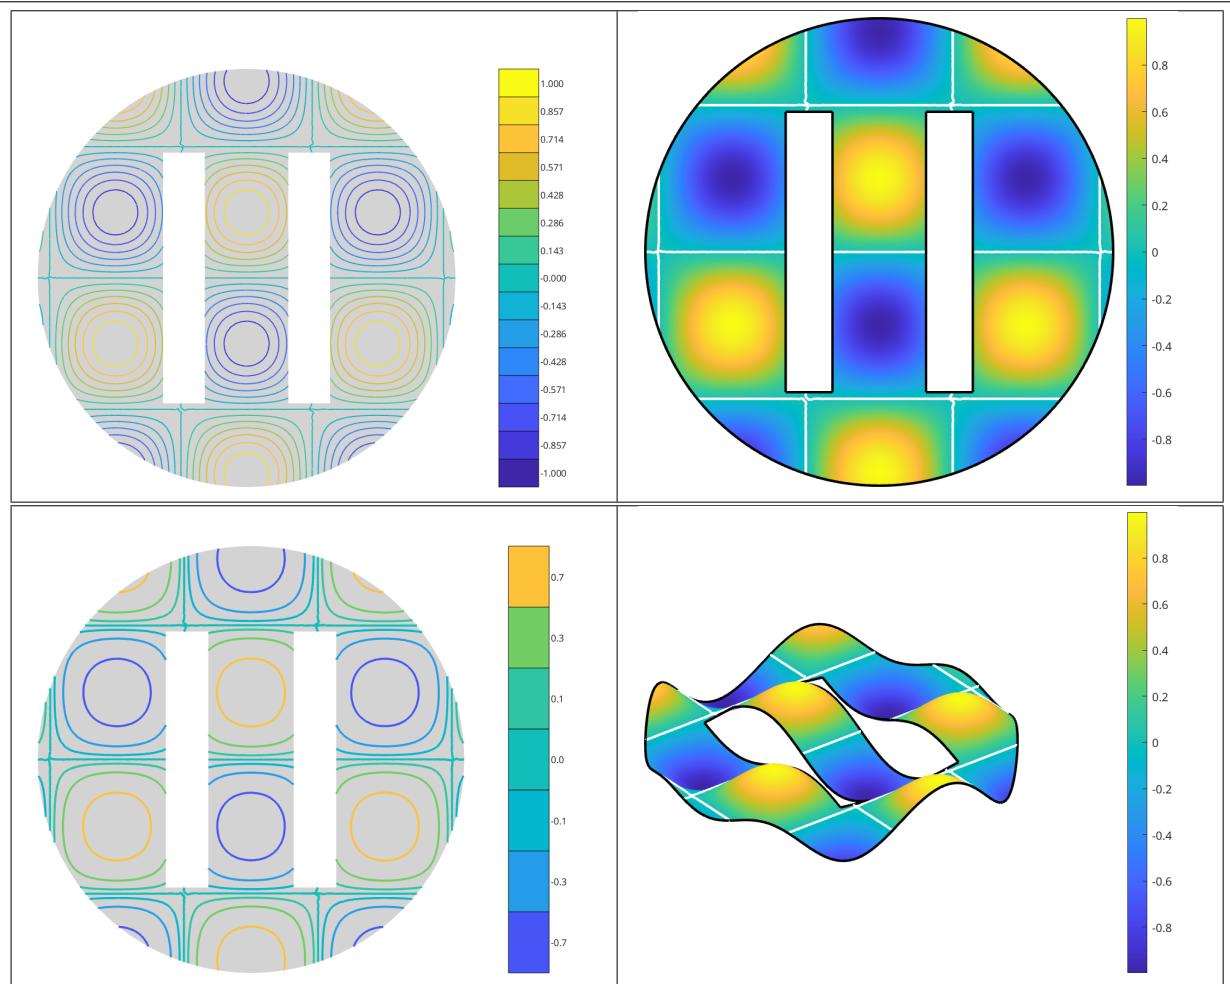

The options of second level are all options of

- `plot3` function in dimension 3 or in dimension 2 with `'plane'` option set to `false`
- `plot` function in 2 with `'plane'` option set to `true`

This function accepts until 3 output arguments :

- 1st output is the colors of the isolines
- 2nd output is the isovalues of the isolines
- 3th output is all the handles of the isolines as an 2D-array of dimension N-by-niso, where N is the number of 2-simplex elementary meshes where isolines are drawn.

2D example : the following code is part of the `fc_graphics4mesh.demos.plotiso2D` function.

```

u=@(x,y) cos(x).*sin(y);
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMesh2D(2);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMesh2D(1);
U2=fc_meshtools.eval(u,q2);
U1=fc_meshtools.eval(u,q1);

shading interp
view(3);axis image;axis off

```

Listing 9: Using `fc_graphics4mesh.plotiso` function with a 3D mesh

7 `fc_graphics4mesh.slicemesh` function

The `fc_graphics4mesh.slicemesh` function displays intersection of a plane and a 3D mesh given by its vertices array `q` and its connectivity array `me`.

Syntax

```

fc_graphics4mesh.slicemesh(q,me,P)
fc_graphics4mesh.slicemesh(q,me,P,Name,Value, ...)

```

Description

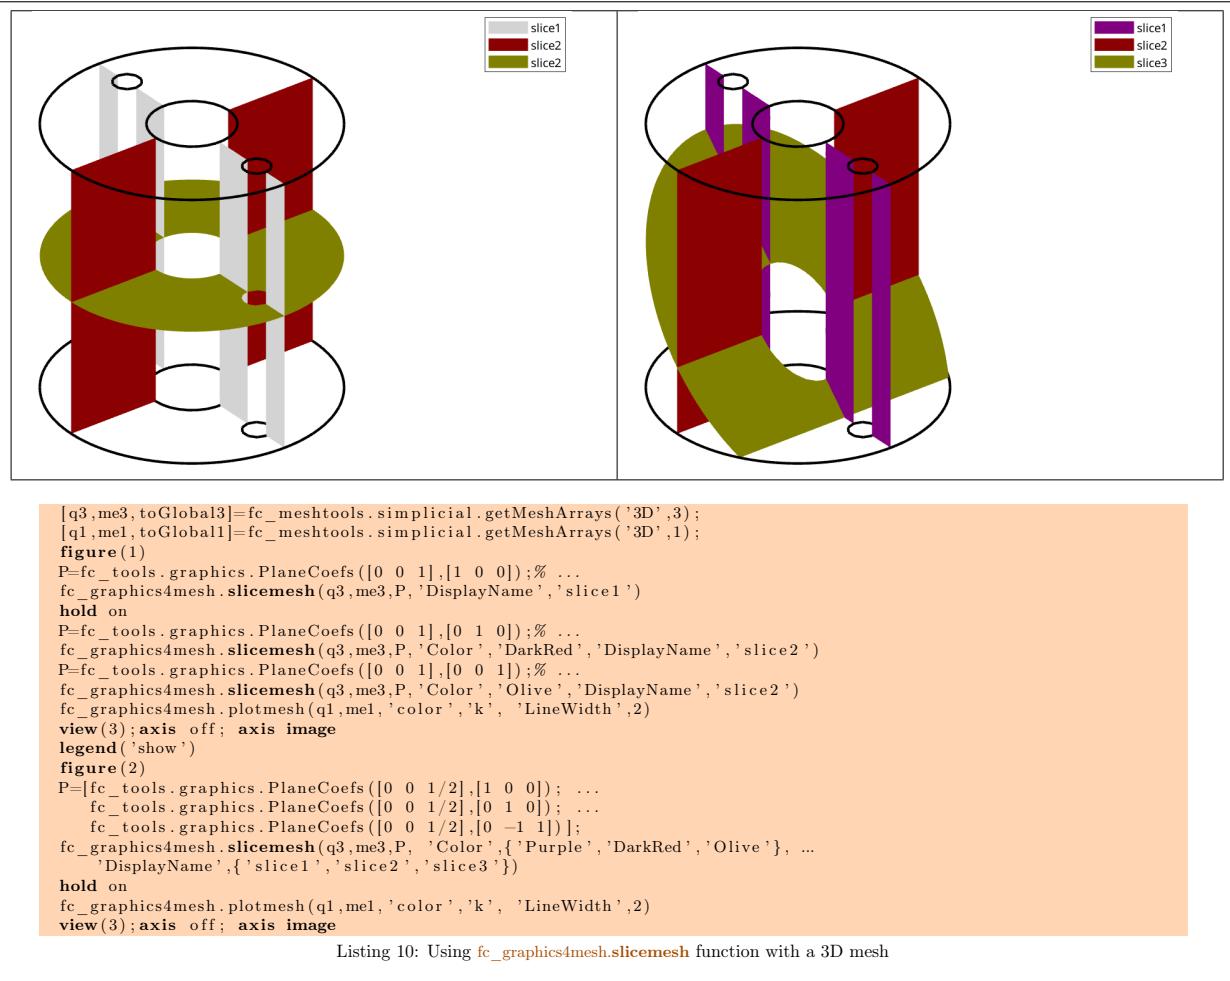

`slicemesh(q,me,P)` displays intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices elements given by `q` and `me` arrays. To compute `P` one can use the `fc_tools.graphics.PlaneCoefs` function of the `fc-tools` toolbox. The 1-by-4 array `P`, is obtained with `P=fc_tools.graphicsPlane(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it. One can also used a n -by-4 array `P` where each line define a plane.

`slicemesh(q,me,P,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.
Options of first level are

- `'color'` : to specify the slice color (default : `'LightGray'`, `rgb=[0.9,0.9,0.9]`)

The options of second level are all options of the `patch` function except `'FaceColor'` and `'EdgeColor'`

3D example : the following code is part of the `fc_graphics4mesh.demos.slicemesh3D` function.

8 `fc_graphics4mesh.slice` function

The `fc_graphics4mesh.slice` function displays intersection of a plane and a 3D mesh given by its vertices array `q` and its connectivity array `me`.

Syntax

```

fc_graphics4mesh.slice(q,me,u,P)
fc_graphics4mesh.slice(q,me,u,P,Name,Value, ...)

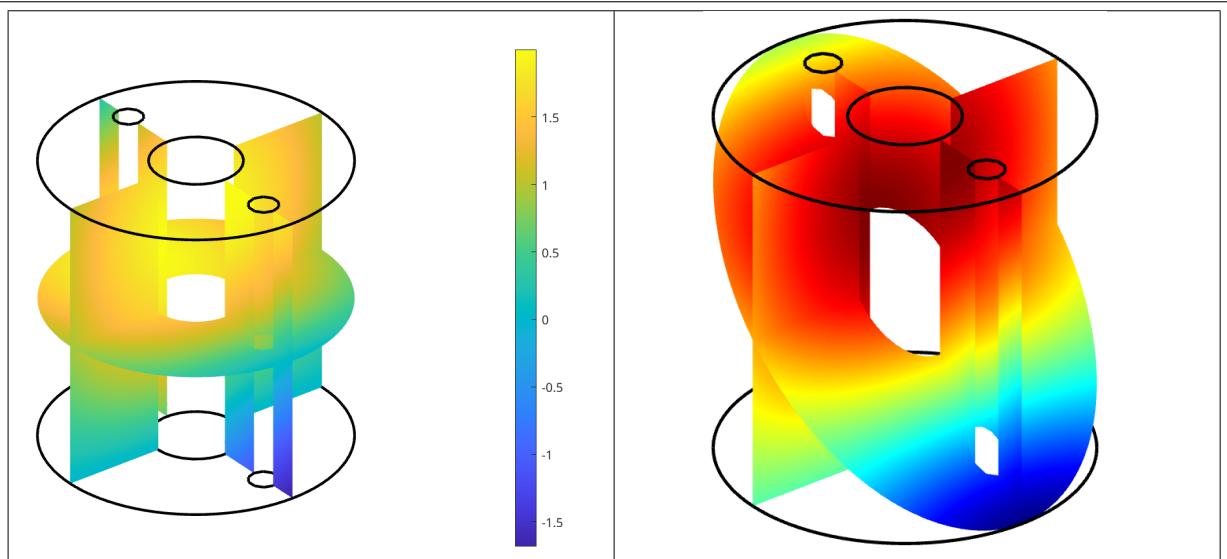

```

Description

`slice(q,me,u,P)` displays data on the intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices elements given by `q` and `me` arrays. To compute `P` one can use the `fc_tools.graphics.PlaneCoefs` function of the `fc-tools` toolbox. The array `P`, is obtained with `P=fc_tools.graphicsPlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it. One can also used a n -by-4 array `P` where each line define a plane.

`slice(q,me,u,P,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments which are those of the `patch` function excepts '`FaceColor`' and '`EdgeColor`'.

3D example : the following code is part of the `fc_graphics4mesh.demos.slice3D` function.

```

u=@(x,y,z) 2*cos(x).*sin(y+z);
[q3,me3,toGlobal3]=fc_meshtools.simplicial.getMeshArrays('3D',3);
U3=fc_meshtools.eval(u,q3);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('3D',1);

figure(1)
P=fc_tools.graphics.PlaneCoefs([0 0 1],[1 0 0]);
fc_graphics4mesh.slicemesh(q3,me3,P)
hold on
fc_graphics4mesh.slice(q3,me3,U3,P)
P=fc_tools.graphics.PlaneCoefs([0 0 1],[0 1 0]);
fc_graphics4mesh.slice(q3,me3,U3,P)
P=fc_tools.graphics.PlaneCoefs([0 0 1],[0 0 1]);% ...
fc_graphics4mesh.slice(q3,me3,U3,P)
fc_graphics4mesh.plotmesh(q1,me1,'color','k','LineWidth',2)
view(3);axis off; axis image
colorbar

figure(2)
P=[fc_tools.graphics.PlaneCoefs([0 0 1],[1 0 0]); ...
    fc_tools.graphics.PlaneCoefs([0 0 1],[0 1 0]); ...
    fc_tools.graphics.PlaneCoefs([0 0 1],[0 -1 1])];
colormap('jet')
fc_graphics4mesh.slice(q3,me3,u,P)
hold on
fc_graphics4mesh.plotmesh(q1,me1,'color','k','LineWidth',2)

```

Listing 11: Using `fc_graphics4mesh.slice` function with a 3D mesh

9 `fc_graphics4mesh.sliceiso` function

The `fc_graphics4mesh.sliceiso` function displays isolines of data `u` on the intersection of a plane and a 3D mesh given by its vertices array `q` and its connectivity array `me`.

Syntaxe

```

fc_graphics4mesh.sliceiso(q,me,u,P)
fc_graphics4mesh.sliceiso(q,me,u,P,Name,Value, ...)

```

Description

`sliceiso (q,me,u,P)` displays isolines of data `u` on the intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices elements given by `q` and `me` arrays. To compute `P` one can use the `fc_tools.graphics.PlaneCoefs` function of the `fc-tools` toolbox. The 1-by-4 array `P`, is obtained with `P=fc_tools.graphicsPlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it. One can also used a n -by-4 array `P` where each line define a plane.

`sliceiso (q,me,u,P,Name,Value, ...)` allows additional key/value pairs to be used when displaying `u`. The key strings could be

- '`niso`' : to specify the number of isolines (default : 10)
- '`isorange`' : to specify the list of isovalues (default : empty)

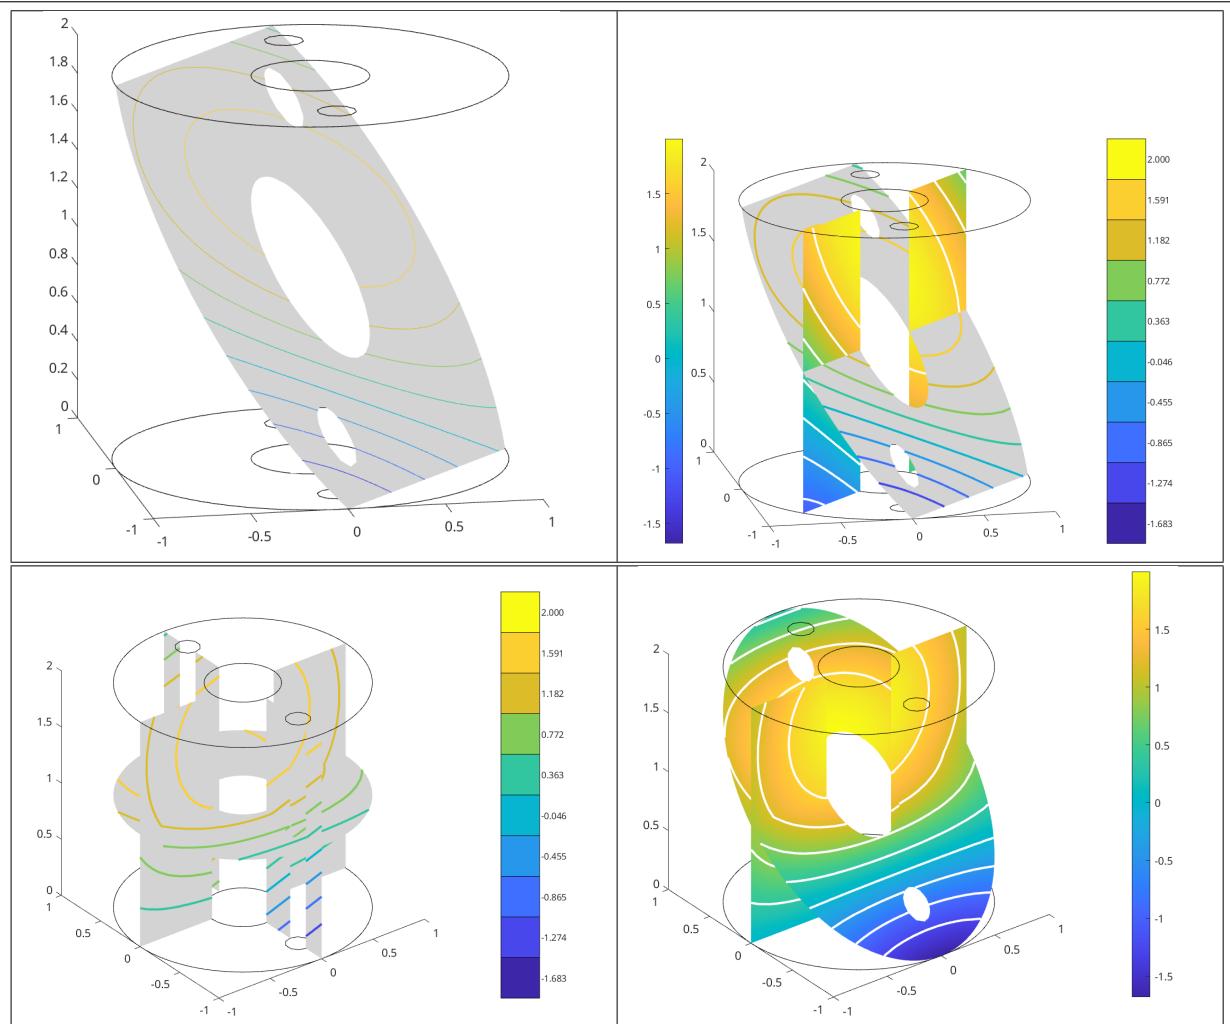

- `'color'` : to specify one color for all isolines (default : empty)
- `'isocolorbar'` : if true display a colorbar. Default is false.
- `'format'` : to specify the format of the isovalues print in the colorbar. Default is `'%g'`.
- `'mouse'` : if `true`, display information on clicked isoline (default : `true`)

For key strings, one could also used any options of the `plot3` function.

This function accepts until 4 output arguments :

- 1st output is the colors of the isolines
- 2nd output is the isovalues of the isolines
- 3th output is the handle of the colobar iso.
- 4th output is all the handles of the isolines as an 2D-array of dimension N-by-niso, where N is the number of elementary meshes where isolines are drawn.

3D example : the following code is part of the `fc_graphics4mesh.demos.sliceiso3D` function.

```

u=@(x,y,z) 2*cos(x).*sin(y+z);
[q3,me3,toGlobal3]=fc_meshtools.simplicial.getMeshArrays('3D',3);
U3=fc_meshtools.eval(u,q3);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('3D',1);

Listing 12: Using `fc_graphics4mesh.sliceiso` function with a 3D mesh

10 fc_graphics4mesh.plotquiver function

The function `fc_graphics4mesh.plotquiver` displays vector field datas on a mesh given by its vertices array `q` and its connectivity array `me`.

Syntax

```
fc_graphics4mesh.plotquiver(q,me,V)
fc_graphics4mesh.plotquiver(q,me,V,Name,Value, ...)
```

Description

`plotquiver(q,me,V)` displays vector field `u` on a simplicial mesh. The vector field data `u` can be a 1-by-dim cell arrays of handle functions or an dim-by- n_q array.

`plotquiver(q,me,V,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.
Options of first level are

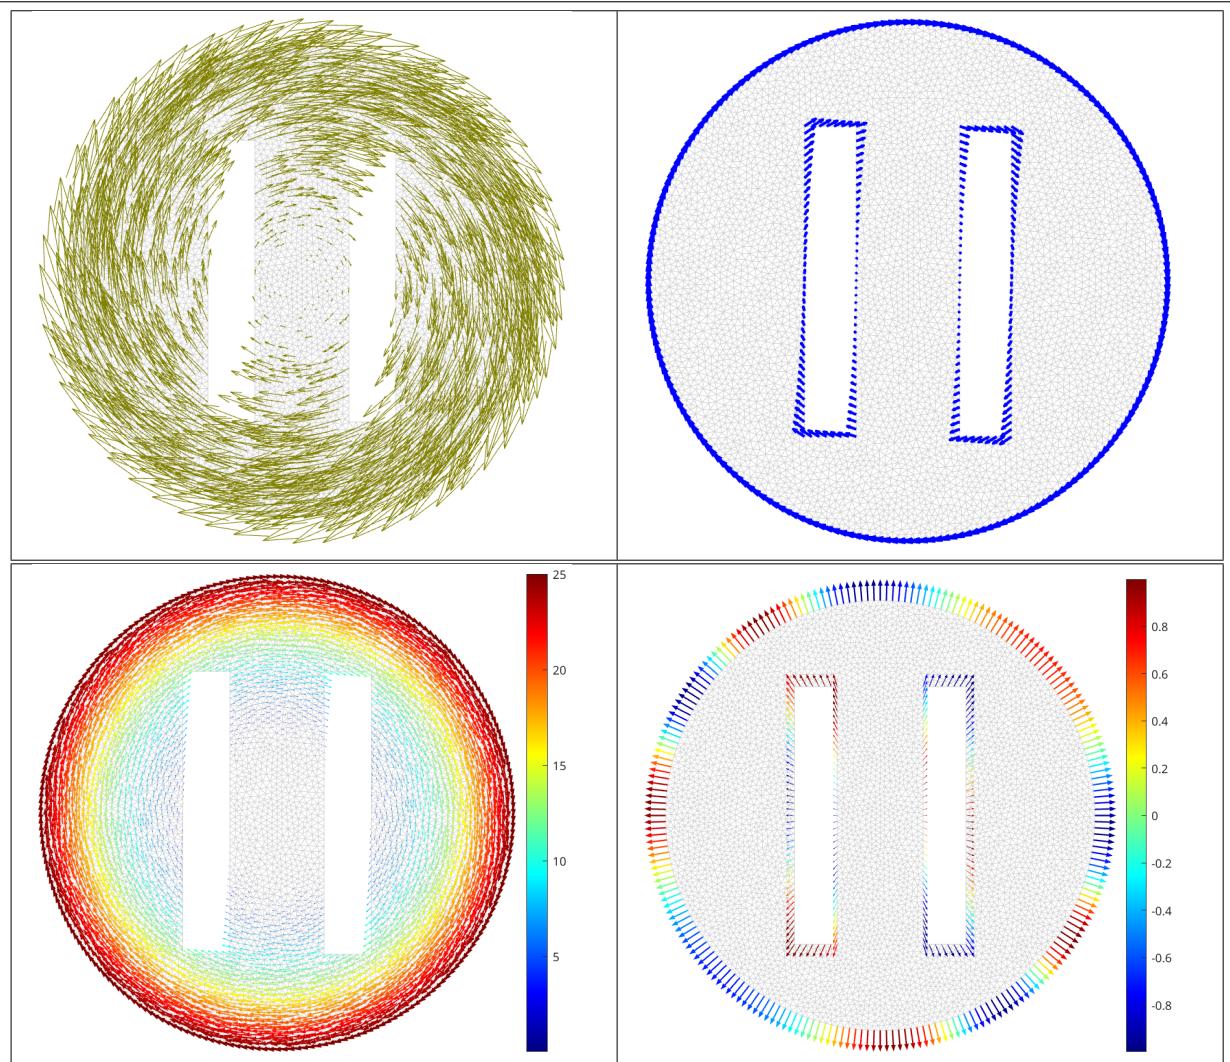

- `'freq'` : quiver frequencie, (default : 1)
- `'scale'` : quiver scale, (default is `fc_meshtools.getCharacteristicLength(q)/20`)
- `'color'` : set one color for all quivers (default: default color of the `quiver` or `quiver3` functions). Cannot be used with `'colordata'` option.
- `'colordata'` : each quiver is colorized with a 1-by- n_q array or a handle function (it will evaluated in all vertices) (default : empty).

The options of second level depend on the type of mesh elements to represent.

One can use any option of the following functions according to the type of d -simplex to be represented.

- In dimension 3 and with empty `'colordata'` , the `quiver3` function is used.
- In dimension 2 and with empty `'colordata'` , the `quiver` function is used.
- In dimension 2 or 3 and with no empty `'colordata'`, the third party `fc_tools.graphics.vfield3 . vfield3` function is used.

2D example

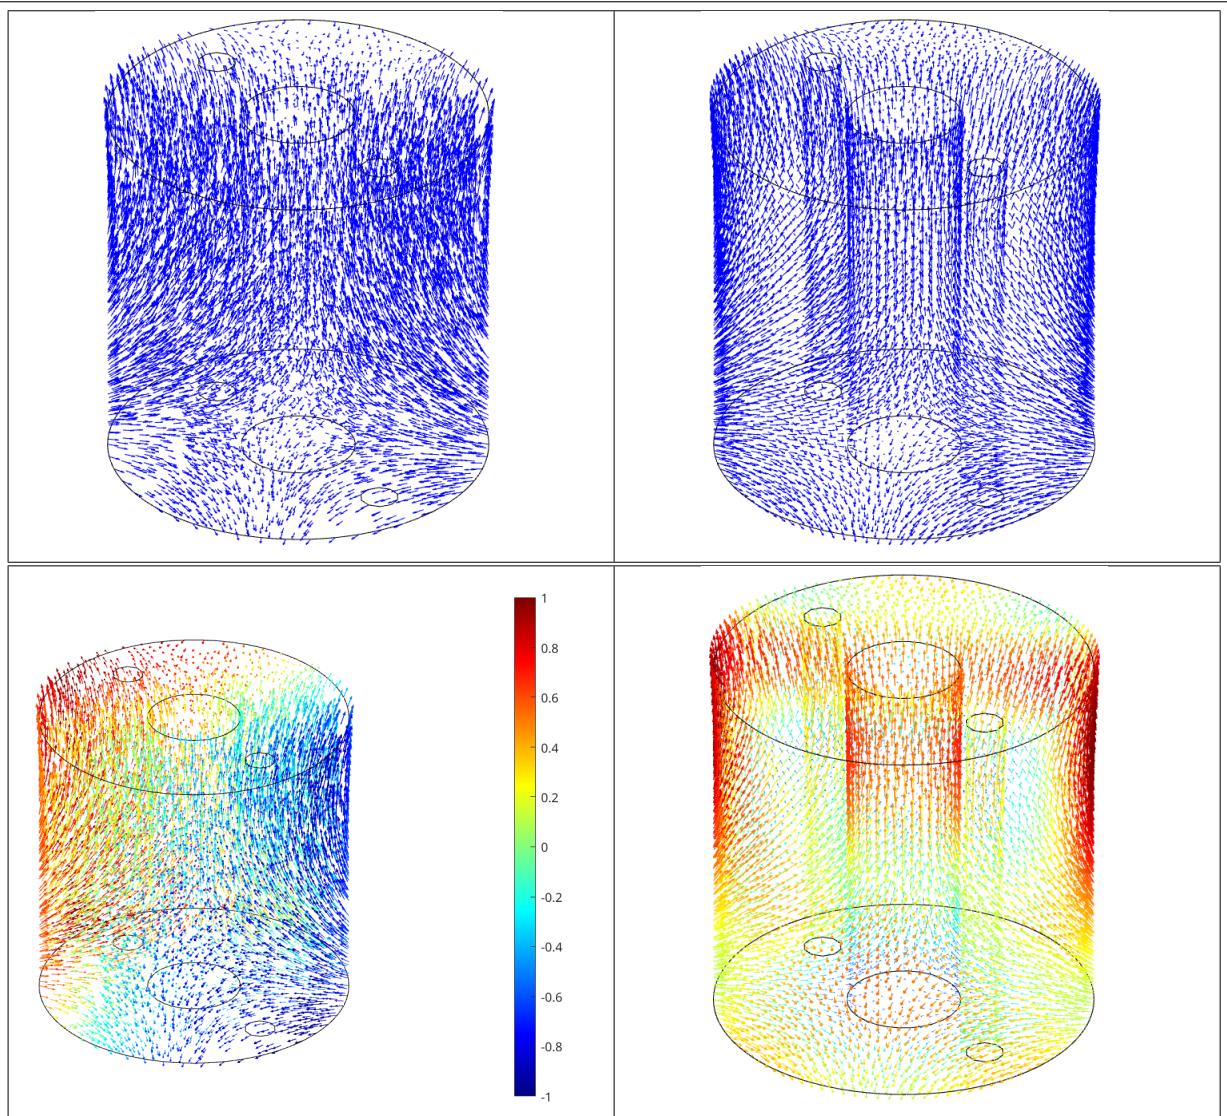

```

v=@(x,y) y.*sqrt(x.^2+y.^2),@(x,y) -x.*sqrt(x.^2+y.^2) ;
vv=@(x,y) x/5,@(x,y) y/5;
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMesh2D(2); % Select small mesh
V2=fc_meshtools.eval(v,q2);

Listing 15: 3D surface mesh : `plotquiver` function

11 `fc_graphics4mesh.scatter` function

The function `fc_graphics4mesh.scatter` displays data on nodes array q

Syntax

```
fc_graphics4mesh.scatter(q,u)
fc_graphics4mesh.scatter(q,u,Name,Value, ...)
```

Description

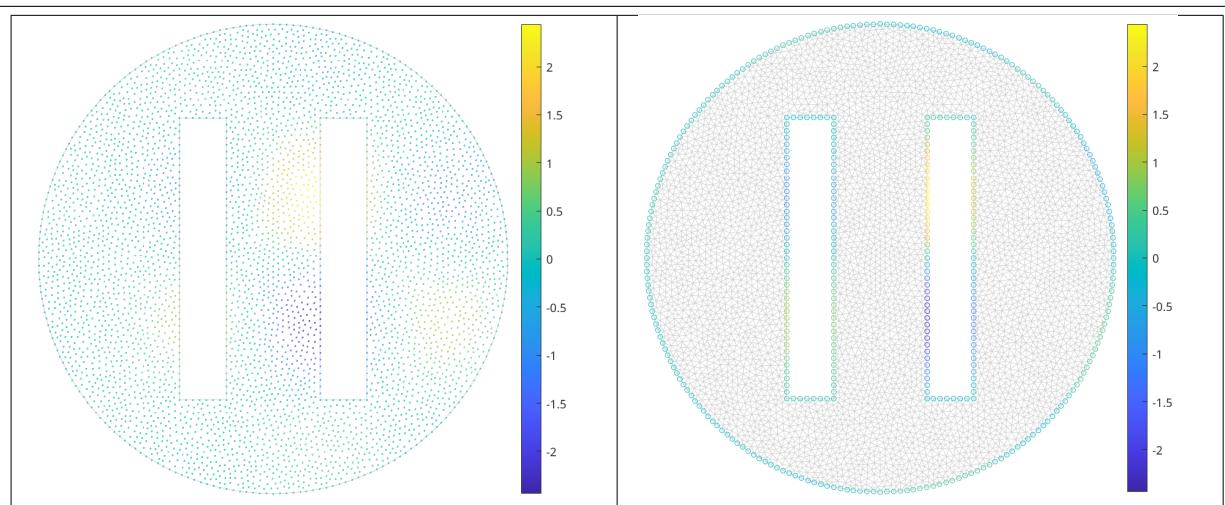

`scatter(q,u)` displays data `u` on nodes array `q` as colorized points. The data `u` can be an handle function or an array.

`scatter(q,u,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- '`MarkerSize`' : size of the marker. Default is 1.
- '`ForcePatch`' : if `true`, uses `patch` function, otherwise uses `scatter` function in dimension 2 or `scatter3` function in dimension 3. Default is `false`.

The options of second level are those of the function used (see '`ForcePatch`' option).

2D example : the following code is part of the `fc_graphics4mesh.demos.scatter2D` function.

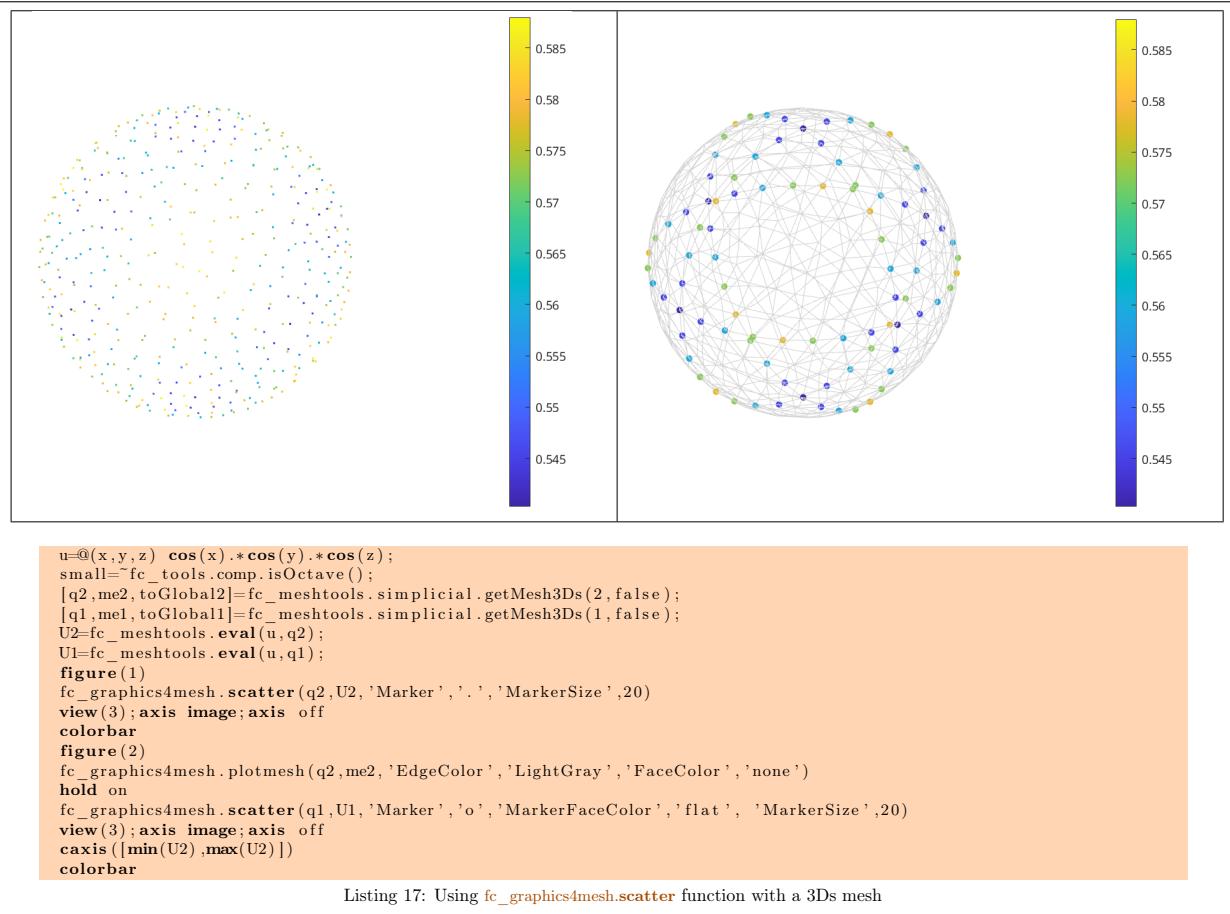

```
u=@(x,y) 3*exp(-((x-1).^2+y.^2)/10).*cos(x-1).*sin(y);
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2,false);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('2D',1,false);
U2=fc_meshtools.eval(u,q2);

```

Listing 18: Using `fc_graphics4mesh.scatter` function with a 3D mesh

12 `fc_graphics4mesh.plotnodes` function

The function `fc_graphics4mesh.plotnodes` displays the nodes of a given mesh nodes array

Syntaxe

```
fc_graphics4mesh.plotnodes(q)
fc_graphics4mesh.plotnodes(q,Name,Value, ...)
```

Description

plotnodes(q) displays all the nodes of the array **q** with a specific marker.

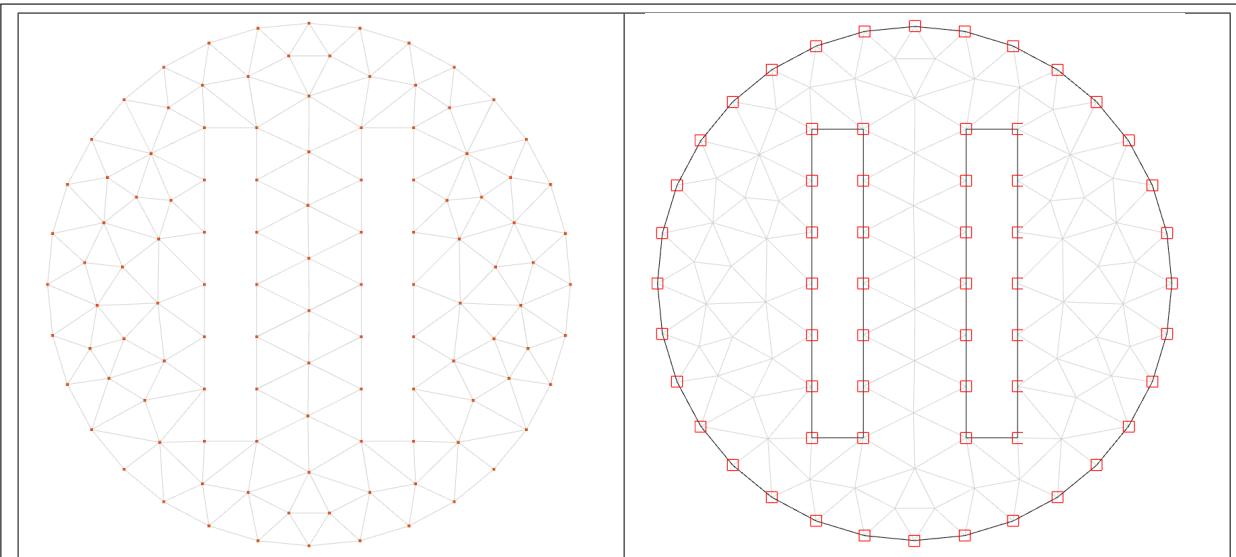

plotnodes(q,Name,Value, ...) specifies options using one or more **Name,Value** pair arguments. Options of first level are

- '**Marker**' : to specify the marker (default : '.'),
- '**MarkerSize**' : to specify the marker size (default : 6),
- '**idx**' : to specify indices of the nodes to be displayed,

The options of second level depend on the dimension :

- if dimension 2, then options are those of the **plot** function,
- if dimension 3, then options are those of the **plot3** function.

2D example : the following code is part of the **fc_graphics4mesh.demos.plotnodes2D** function.

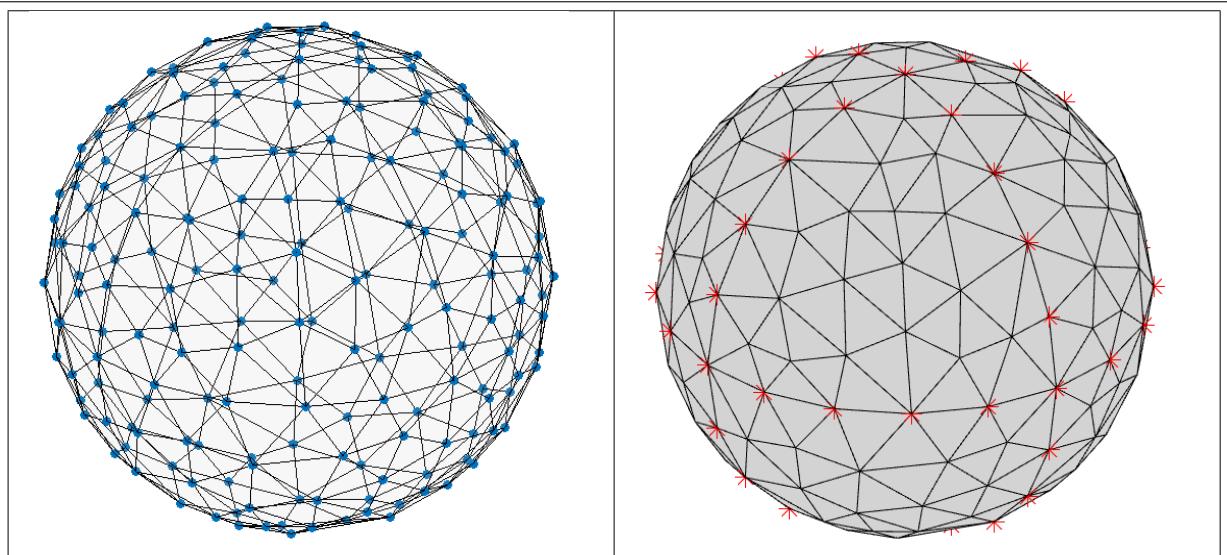

```
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2,true);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('2D',1,true);

```

Listing 21: Using `fc_graphics4mesh.plotnodes` function with a 3D mesh

13 `fc_graphics4mesh.plotnodesidx` function

The function `fc_graphics4mesh.plotnodesidx` displays indices of the given mesh nodes array

Syntaxe

```
fc_graphics4mesh.plotnodesidx(q,  
fc_graphics4mesh.plotnodesidx(q,Name,Value, ...)
```

Description

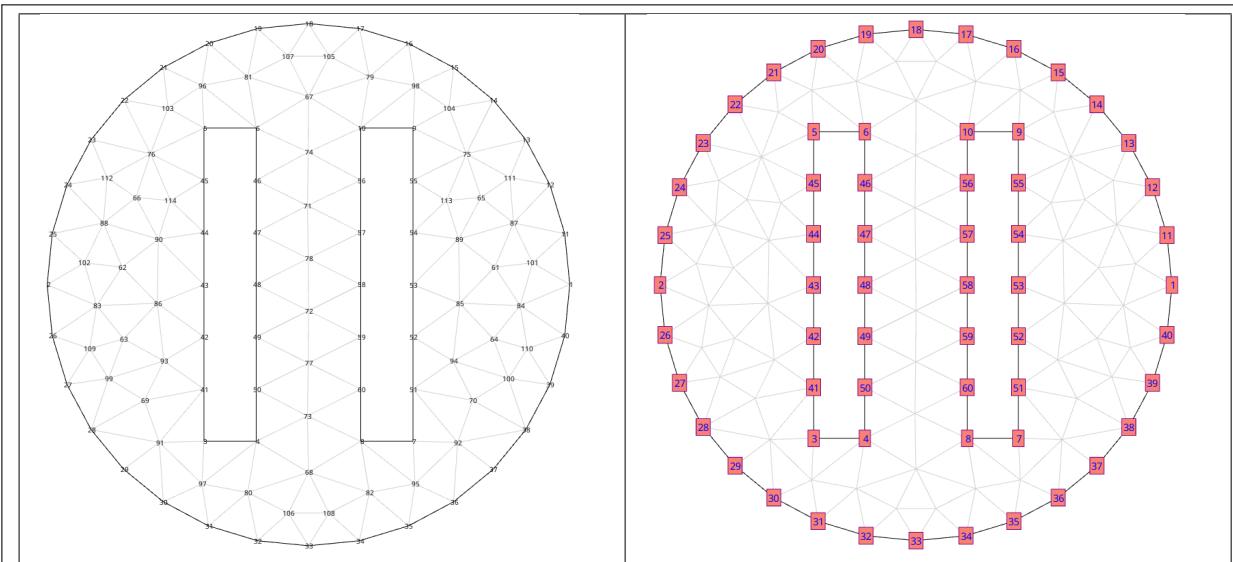

`plotnodesidx(q)` displays all the numbers/indices of the nodes array `q`

`plotnodesidx(q,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- `'toGlobal'` : to specify other indices to display,
- `'idx'` : to select particular indices.

The options of second level are those of the `text` function.

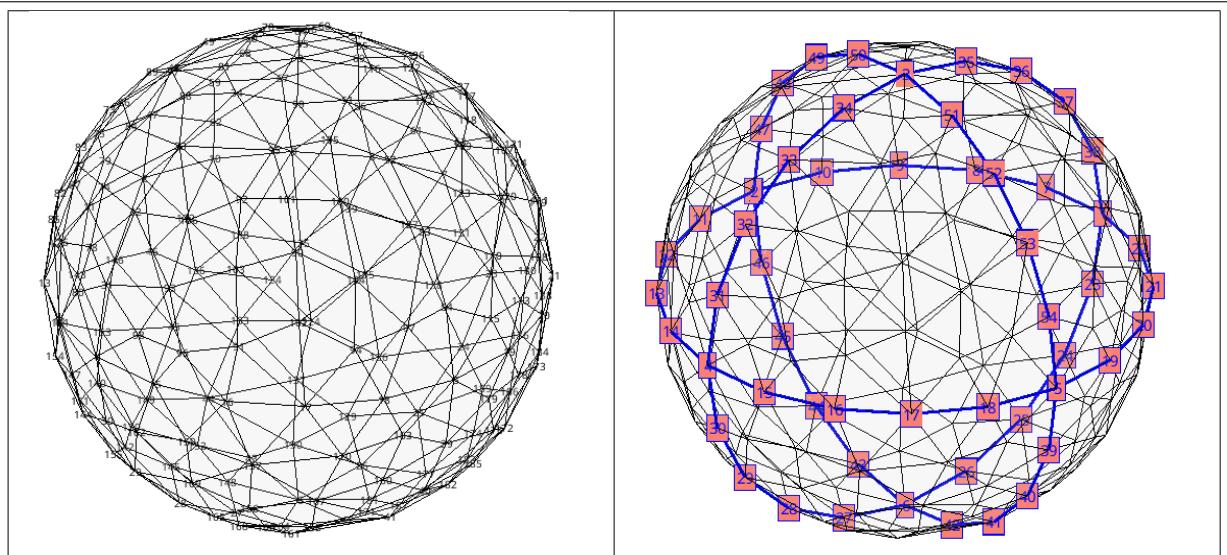

2D example : the following code is part of the `fc_graphics4mesh.demos.plotnodesidx2D` function.

```
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2,true);

3D example : the following code is part of the `fc_graphics4mesh.demos.plotnodesidx3D` function.

14 `fc_graphics4mesh.plotelementsidx` function

The function `fc_graphics4mesh.plotelementsidx` displays indices of a given mesh connectivity array

Syntaxe

```
fc_graphics4mesh.plotelementsidx(q,me)
fc_graphics4mesh.plotelementsidx(q,me,Name,Value, ...)
```

Description

`plotelementsidx(q,me)` displays all the numbers/indices of the connectivity array `me`.

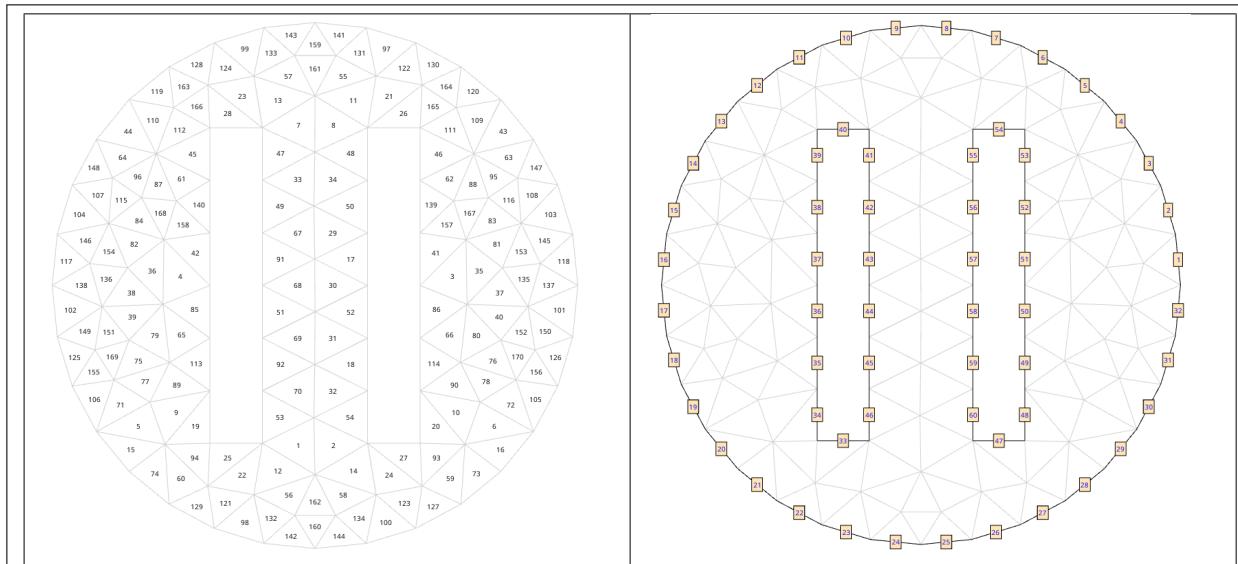

`plotelementsidx(q,me,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.

Options of first level are

- `'toGlobal'` : to specify other indices to display,
- `'idx'` : to select particular indices.

The options of second level are those of the `text` function.

2D example : the following code is part of the `fc_graphics4mesh.demos.plotelementsidx2D` function.

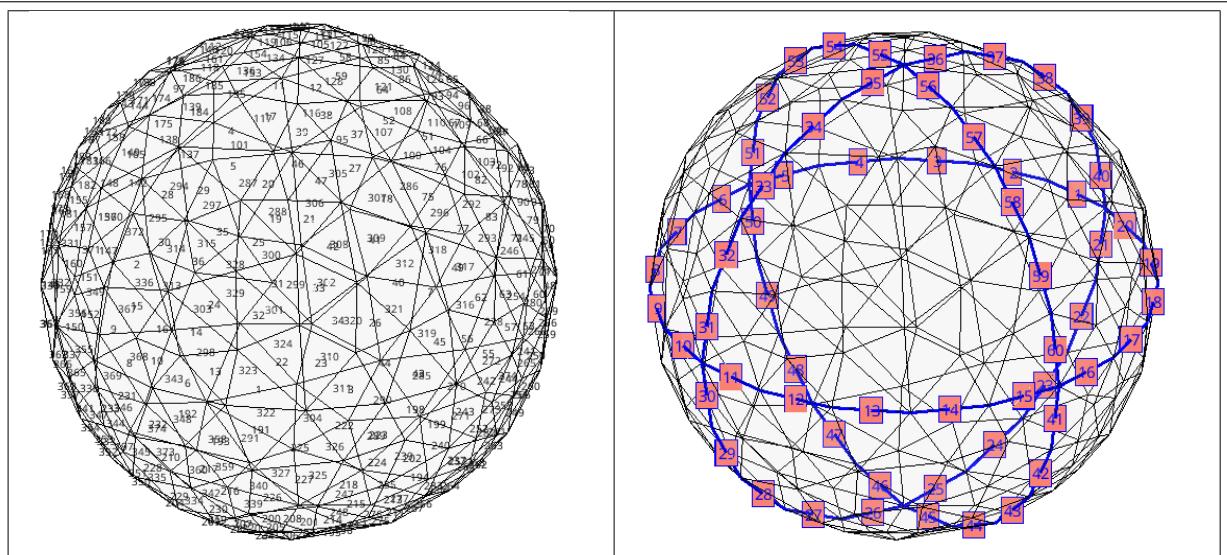

```
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2,true);
