

fc_siplt Matlab toolbox, User's Guide*

version 0.2.6

François Cuvelier[†]

March 5, 2023

Abstract

This Matlab toolbox uses a `SiMESH` object, coming from the `fc-simesh` toolbox, to display simplicial meshes or datas on simplicial meshes. Its kernel uses the `fc-graphics4mesh` toolbox.

1 Introduction

This **experimental** Matlab toolbox uses the `graphics4mesh` toolbox[1] to do some graphic representations on a `sIMESH` object of the `csimesh` toolbox[2].

In Listing 1, a 2D example is provided with the 4 generated figures. For graphic representations, one can also used `Th.plotmesh(...)` instead of `fc_siplt.plotmesh(Th,...)`, `Th.plot(...)` instead of `fc_siplt.plot(Th,...)` and so on.

```

geofile=fc_simesh.get_geo(2,2,'sample2D01.geo');
% Using GMSH >= 4.0.0 to create mesh file
meshfile=fc_oogmsh.gmsh.buildmesh2d(geofile,200,'force',true);
% Creating siMesh object by reading the mesh file
Th=fc_simesh.siMesh(meshfile);
% Computing datas on siMesh object
u=@(x,y) cos(x.^2-y.^2);
U=Th.eval(u);

2 Installation

This toolbox was only tested on Ubuntu 22.04.1 with Matlab R2022a.

One just has to get/download the install file

```
mfc_siplt_install.m
```

or get it on the dedicated web page. Thereafter, one run it under Matlab. This command download, extract and configure the *fc-siplt* toolbox and all the required required toolboxes in the current directory.

For example, to install this toolbox in *~/Matlab* directory, one have to copy the file *mfc_siplt_install.m* in the *~/Matlab* directory. Then in a Matlab terminal run the following commands

```
>> cd ~/Matlab  
>> mfc_siplt_install
```

There is the output of the *mfc_siplt_install* command on a Linux computer:

The complete toolbox (i.e. with all the other needed toolboxes) is stored in the directory *~/Matlab/fc-siplt-full* and, for each Matlab session, one have to set the toolbox by:

```
>> addpath('~/Matlab/fc-siplt-full/mfc_siplt-0.2.6')  
>> fc_siplt.init()
```

If it's the first time the *fc_siplt.init()* function is used, then its output is

3 fc_siplt.plotmesh function

The **fc_siplt.plotmesh** function displays the mesh or parts of the mesh defined by an **SiMESH** object.

Syntaxe

```
fc_siplt . plotmesh(Th)
fc_siplt . plotmesh(Th,Name,Value , ...)
```

Description

fc_siplt.plotmesh(Th) displays all the (**Th.d**)-dimensional simplices elements of **Th**, a **SiMESH** object.

fc_siplt.plotmesh(Th,Name,Value, ...) specifies function options using one or more **Name,Value** pair arguments. Options of first level are

- '**d**' : to specify the dimension of the simplices elements (default : **Th.d**)
- '**labels**' : to select the labels of the elements to display,
- '**color**' : to specify the color of the displayed mesh elements. (default : use one color by displayed mesh elements),
- '**inlegend**' : add a legend name to graph if true (default : **false**)
- '**bounds**' : If **true**, draw the borders of the selected elementaries mesh elements (only for 2-dimensional simplices). (default : **false**)
- '**cutPlane**' : cut mesh by n plans given by n -by-4 array P where the equation of the i -th cut plane is given by

$$P(i,1)x + P(i,2)y + P(i,3)z + P(i,4) = 0.$$

The normal vector $P(i,1:3)$ pointed to the part of the mesh not displayed. (only for simplices in dimension 3) default : [] (no cut).

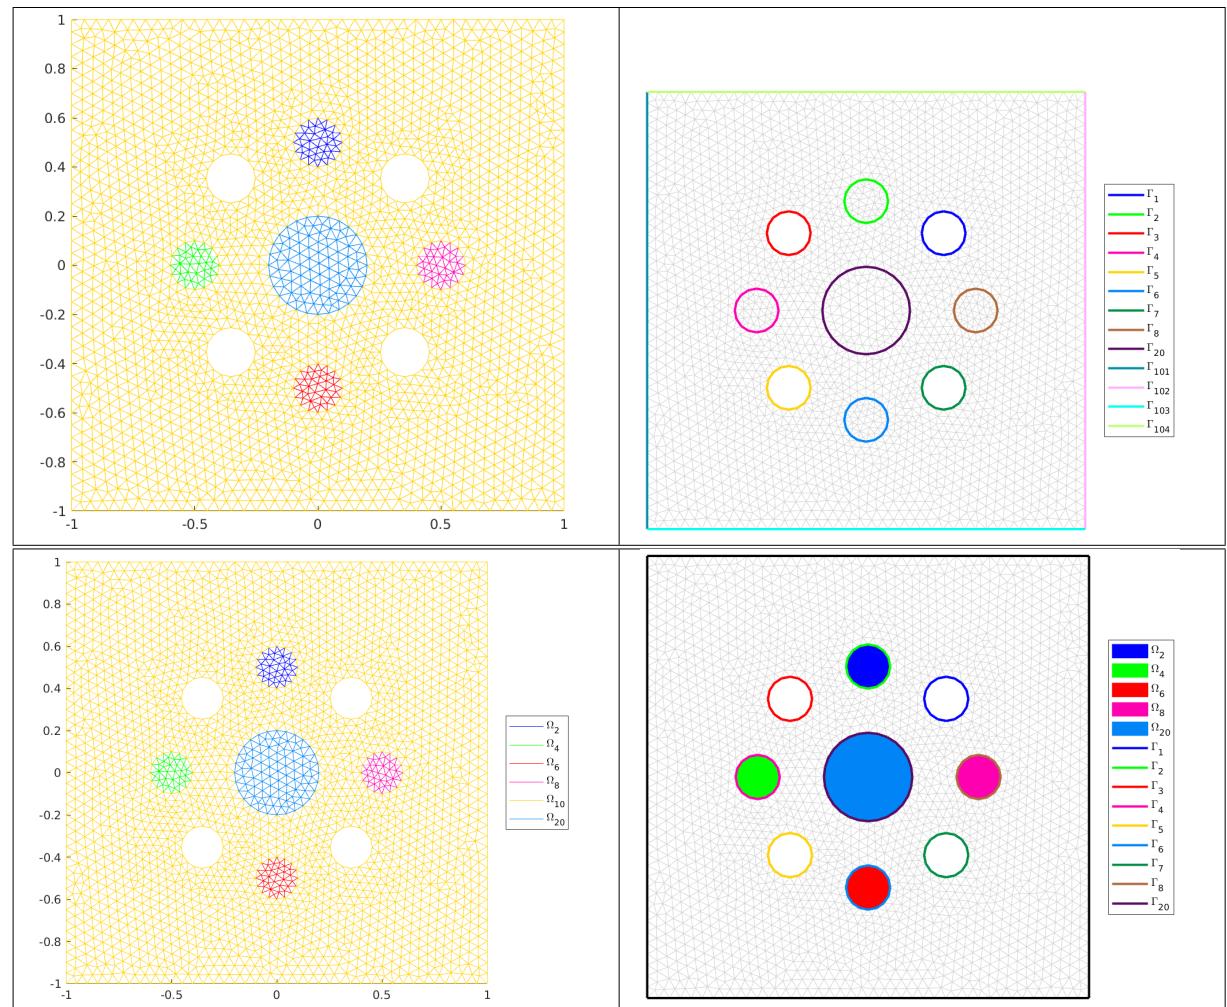

The options of second level depend on the type of elementaries mesh elements to represent.

One can use any option of the following functions according to the type of d -simplex to be represented.

- In dimension 3,
 - if $d == 3$, **patch** function is used,
 - if $d == 2$, **trimesh** function is used,
 - if $d == 1$, **plot3** function is used,
 - if $d == 0$, **plot3** function is used,
- In dimension 2,
 - if $d == 2$, **trimesh** function is used,
 - if $d == 1$, **plot** function is used,
 - if $d == 0$, **plot** function is used,
- In dimension 1,
 - if $d == 1$, **line** function is used,
 - if $d == 0$, **plot** function is used,

4 `fc_siplt.plot` function

The `fc_siplt.plot` function displays scalar datas on the mesh or parts of the mesh defined by an `SiMESH` object.

Syntaxe

```

fc_siplt.plot(Th,u)
fc_siplt.plot(Th,u,Name,Value,...)

```

Description

`fc_siplt.plot(Th,u)` displays data `u` on all the (`Th.d`)-dimensional simplices elements of `Th`, a `SiMESH` object.
The data `u` is an 1D-array of size `Th.nq` or `Th.nqGlobal` or `Th.nqParent`.

`fc_siplt.plot(Th,u,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.

Options of first level are

- '`d`' : to specify the dimension of the simplices elements (default : `Th.d`)
- '`labels`' : to select the labels of the elements to display data,
- '`plane`' : if true, made a 2D representation in the xy -plane, otherwise made a 3D representation with z -value set to `u` (default : `false`)

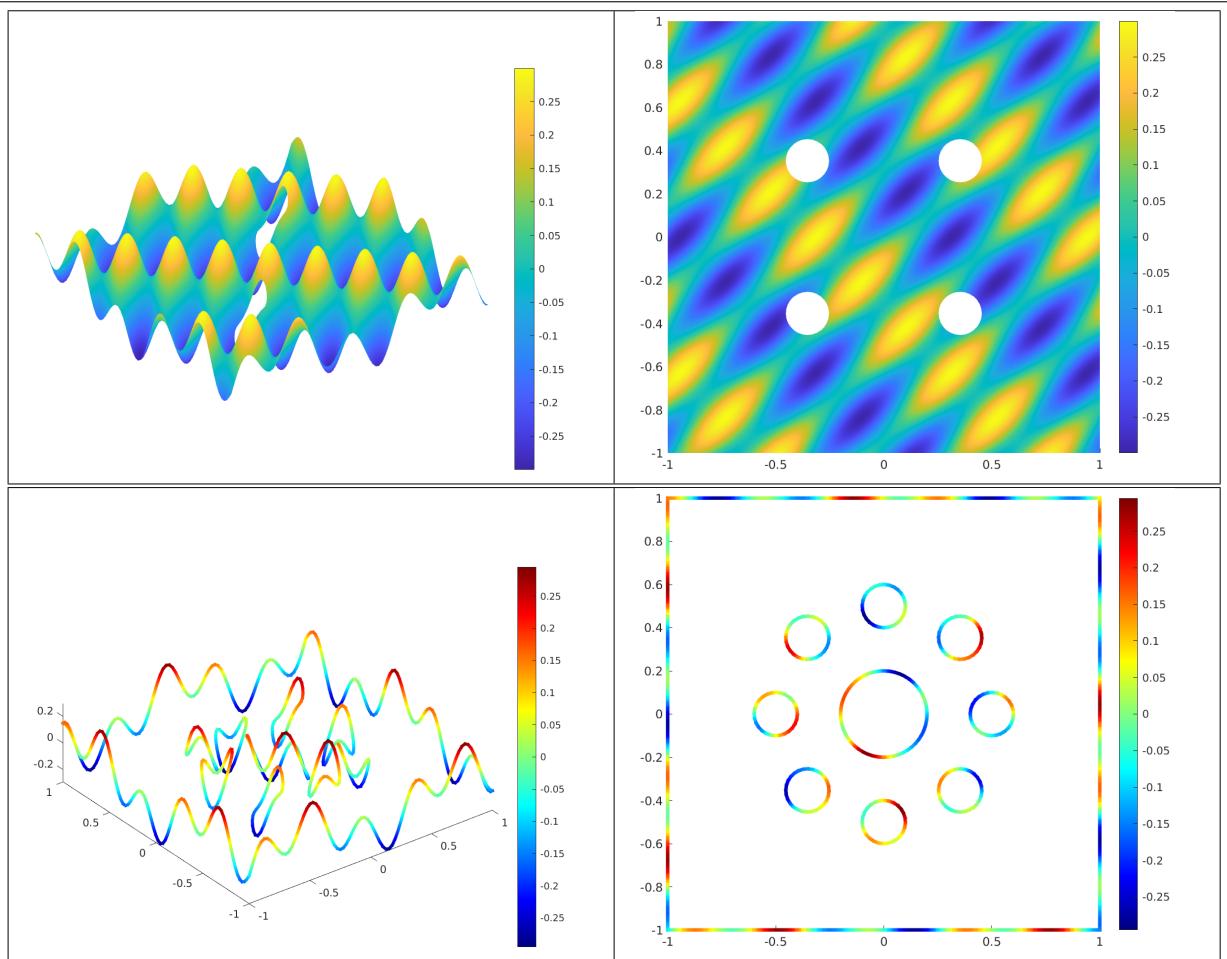

The options of second level depend on the type of elementaries mesh elements on which we want to represent datas.

One can use any option of the following functions according to the type of d -simplex.

- In dimension 3, `patch` function is used for $d \in [1, 3]$.
- In dimension 2,
 - for $d == 2$, if '`plane`' option is true, `patch` function is used, otherwise it's `trisurf` function,
 - for $d == 1$, `patch` function is used.
- In dimension 1 and $d == 1$, `plot` function is used

5 fc_siplt.plotiso function

The `fc_siplt.plotiso` function displays isolines from datas on the mesh or parts of the mesh defined by an `SiMESH` object. This function only works with 2-simplices in space dimension 2 or 3.

Syntax

```

fc_siplt.plotiso(Th,u)
fc_siplt.plotiso(Th,u,Name,Value, ...)

```

Description

`fc_siplt.plotiso(Th,u)` displays data `u` on all the 2-dimensional simplices elements of `Th`, a `SiMESH` object..
The data `u` is an 1D-array of size `Th.nq` or `Th.nqGlobal` or `Th.nqParent`.

fc_siplt.plotiso(Th,u,key,value, ...) specifies function options using one or more **key,value** pair arguments.

Options of first level are

- '**niso**' : to specify the number of isolines (default : 10)
- '**isorange**' : to specify the list of isovalues (default : empty)
- '**isocolorbar**' : if **true**, colorbar with isovalues is drawn (default : **false**)
- '**format**' : to specify the format of the isovalues on the colorbar (default : '%g')
- '**labels**' : to select the labels of the elements to display data,
- '**plane**' : if true, isolines are in the xy -plane, otherwise isolines are in 3D with z -value set to **u** (default : **false**)
- '**color**' : to specify one color for all isolines (default : empty)
- '**mouse**' : if **true**, display information on clicked isoline (default : **false**)

The options of second level are all options of

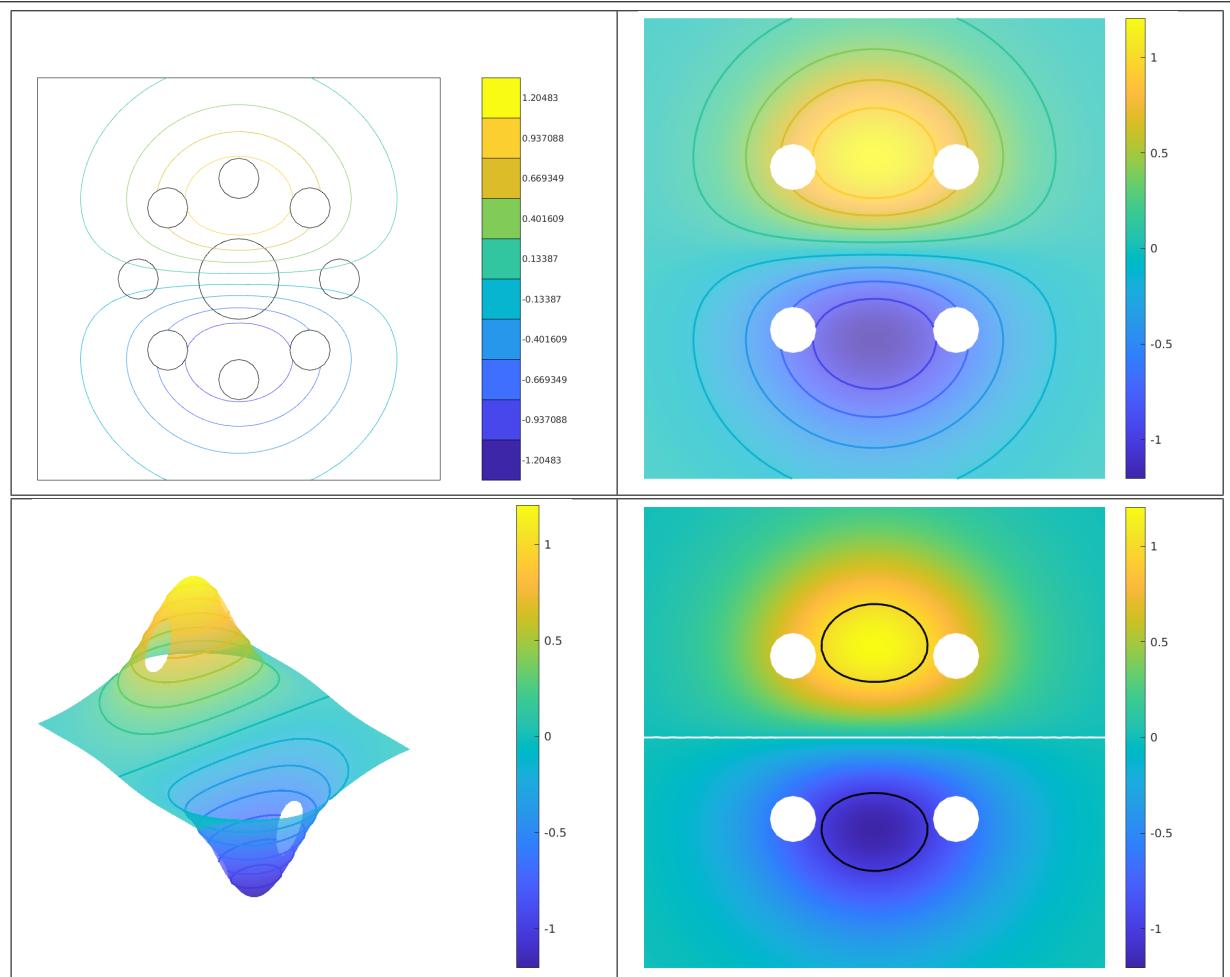

- **plot3** function in dimension 3 or in dimension 2 with '**plane**' option set to **false**
- **plot** function in 2 with '**plane**' option set to **true**

This function accepts until 4 output arguments :

- 1st output is the colors of the isolines
- 2nd output is the isovalues of the isolines
- 3th output is the handle of the colobar iso.
- 4th output is all the handles of the isolines as an 2D-array of dimension N-by-niso, where N is the number of 2-simplex elementary meshes where isolines are drawn.

6 `fc_siplt.slicemesh` function

The `fc_siplt.slicemesh` function displays intersection of a plane and a 3D mesh or parts of a 3D mesh defined by an `siMESH` object.

Syntax

```

fc_siplt.slicemesh(Th,P)
fc_siplt.slicemesh(Th,P,Name,Value,...)

```

Description

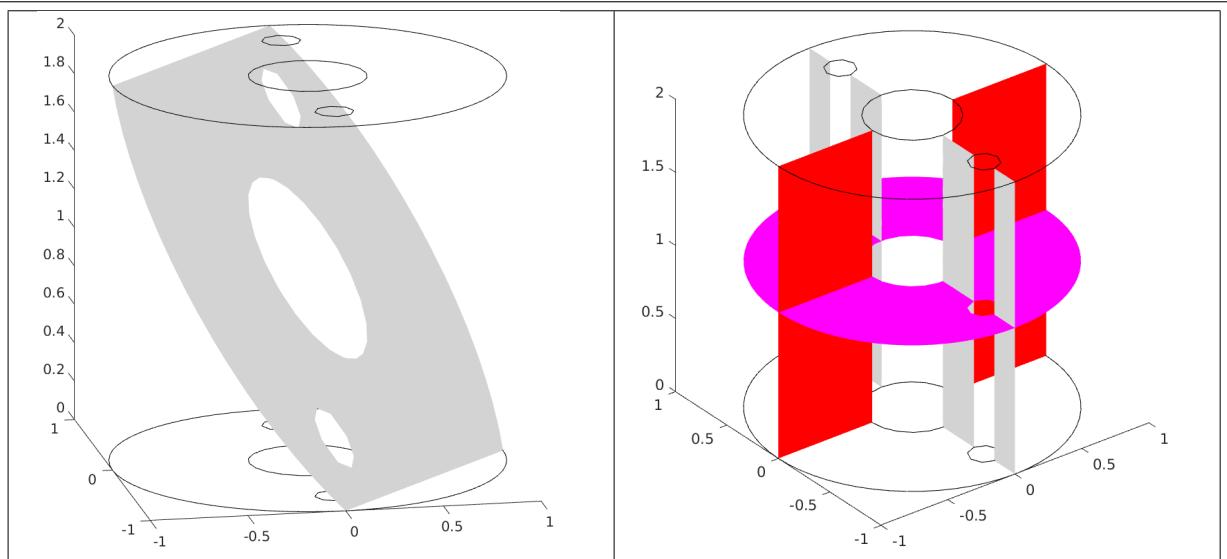

`fc_siplt.slicemesh(Th,P)` displays intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices elements of `Th`, a `siMESH` object. To compute `P` one can use the function `fc_tools.graphics.PlaneCoefs` of the `Ctools` toolbox. With this function, the array `P`, is obtained with `P=fc_tools.graphics.PlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it.

`fc_siplt.slicemesh(Th,P,Name,Value,...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- '`color`' : to specify the slice color (default : '`lightgrey`', `rgb=[0.9,0.9,0.9]`)
- '`labels`' : to select the labels of the elements to intersect,

6.1 3D example

the following code is part of the `fc_siplt.demos.slicemesh3D` function.

```

7 `fc_siplt.slice` function

The method `fc_siplt.slice` function displays datas on the intersection of a plane and a 3D mesh or parts of a 3D mesh defined by an `SiMESH` object.

Syntaxe

```

fc_siplt.slice(Th,u,P)
fc_siplt.slice(Th,u,P,Name,Value, ...)

```

Description

`fc_siplt.slice(Th,u,P)` displays `u` data on the intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices elements of `Th`, a `SiMESH` object. The data `u` is an 1D-array of size `Th.nq` or `Th.nqGlobal` or `Th.nqParent`. To compute `P` one can use the function `fc_tools.graphics.PlaneCoefs` of the `Ctools` toolbox. With this function, the array `P`, is obtained with `P=fc_tools.graphics.PlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it.

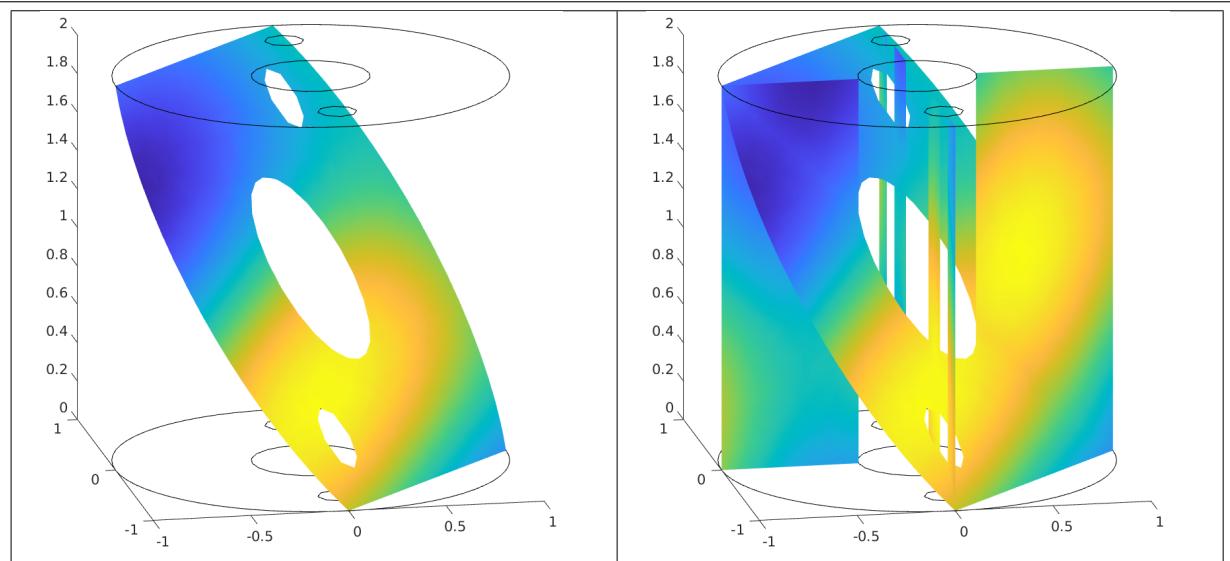

`fc_siplt.slice(Th,u,P,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.

Options of first level are

- `'labels'` : to select the labels of the elements to intersect,

8 `fc_siplt.sliceiso` function

The `fc_siplt.sliceiso` function displays isolines of data on the intersection of a plane and a 3D mesh or parts of a 3D mesh defined by an `siMESH` object.

Syntax

```

fc_siplt.sliceiso(Th,u,P)
fc_siplt.sliceiso(Th,u,P,Name,Value, ...)

```

Description

`fc_siplt.sliceiso(Th,u,P)` displays `u` data as isolines on the intersection of the plane defined by $P(1)x + P(2)y + P(3)z + P(4) = 0$ and all the 3-dimensional simplices elements of `Th`, a `siMESH` object. The data `u` is an 1D-array of size `Th.nq` or `Th.nqGlobal` or `Th.nqParent`. To compute `P` one can use the function `fc_tools.graphics.PlaneCoefs` of the `Ctools` toolbox. With this function, the array `P`, is obtained with `P=fc_tools.graphics.PlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to the plane.

`fc_siplt.sliceiso(Th,u,P,key,value, ...)` allows additional key/value pairs to be used when displaying `u`. The key strings could be

- '`labels`' : to select the labels of the elements to intersect,
- '`niso`' : to specify the number of isolines (default : 10)
- '`isorange`' : to specify the list of isovalues (default : empty)

- 'color' : to specify one color for all isolines (default : empty)
- 'isocolorbar' : if true display a colorbar. Default is false.
- 'format' : to specify the format of the isovalues print in the colorbar. Default is '%g'.

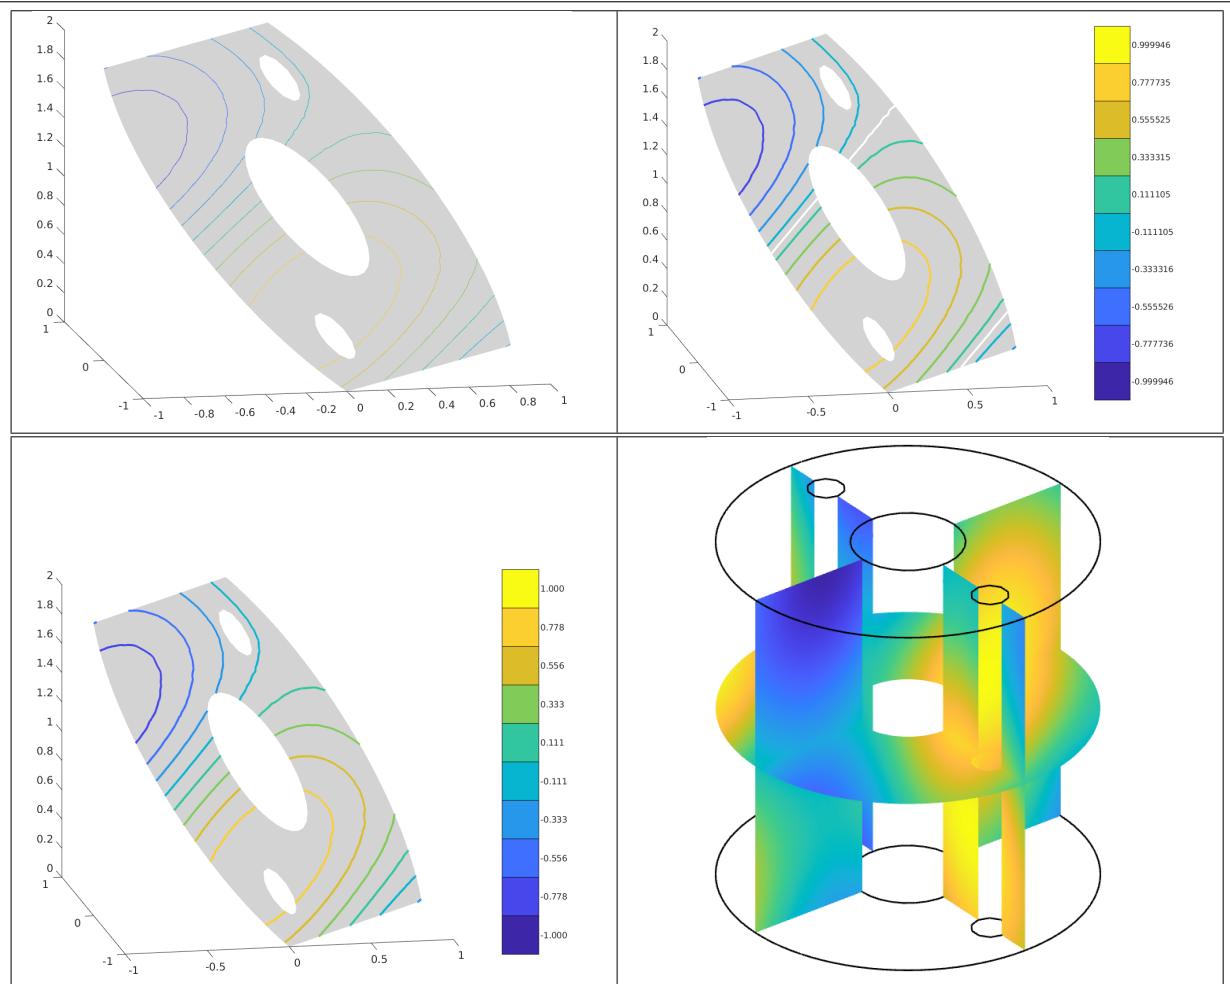

For key strings, one could also used any options of the plot3 function.

This function accepts until 4 output arguments :

- 1st output is the colors of the isolines
- 2nd output is the isovalues of the isolines
- 3th output is the handle of the colobar iso.
- 4th output is all the handles of the isolines as an 2D-array of dimension N-by-niso, where N is the number of elementary meshes where isolines are drawn.

9 fc_siplt.plotquiver function

The **fc_siplt.plotquiver** function displays vector field datas on the mesh or parts of the mesh defined by an **SiMESH** object.

Syntaxe

```
fc_siplt.plotquiver(Th,V)
fc_siplt.plotquiver(Th,V,Key,Value, ...)
```

Description

fc_siplt.plotquiver(Th,V) displays vector field **U** on all the **d**-dimensional simplices elements in dimension $d = 2$ or $d = 3$. The data **V** is an 2D-array of size **Th.nq**-by- d or 2-by-**Th.nq**.

fc_siplt.plotquiver(Th,V,Key,Value, ...) specifies function options using one or more **Key,Value** pair arguments. Options of first level are

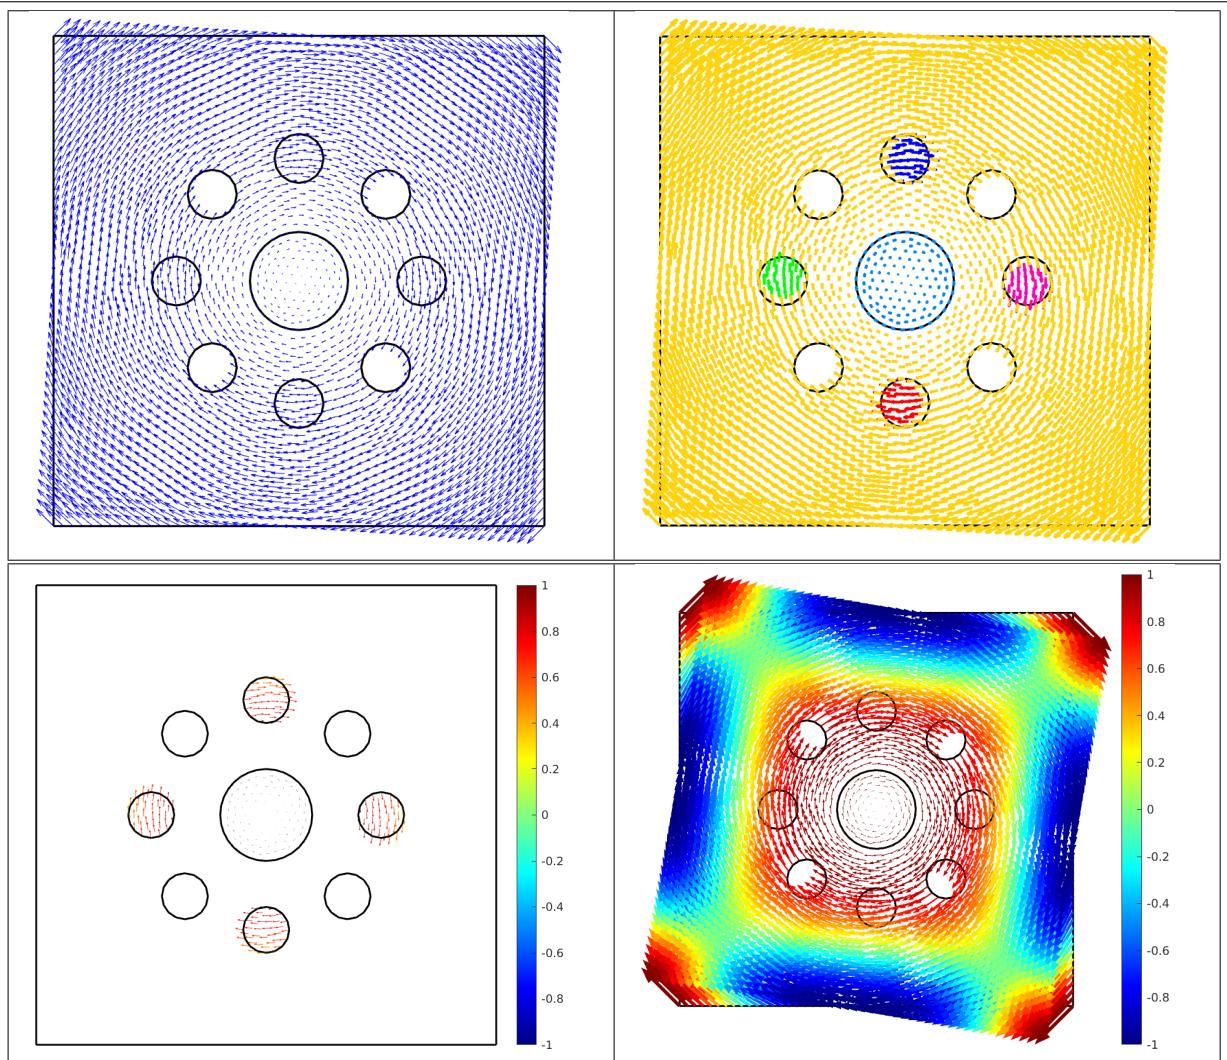

- '**labels**' : to select the labels of the elements to display data,
- '**freq**' : quiver frequencie, (default : 1)
- '**scale**' : quiver scale, (default : ...)
- '**colordata**' : set colors on each quiver (default : empty).

The options of second level depend on space dimension and '**colordata**' option. One can use any option of the following functions

- **quiver** function in dimension 2 with an empty '**colordata**'
- **quiver3** function in dimension 3 with an empty '**colordata**'
- **vfield3** function in dimension 2 or 3 with '**colordata**' set to an 1D-array of length **Th.nq**.

10 fc_siplt.scatter function

The `fc_siplt.scatter` function displays scalar data as colorized points on the mesh or parts of the mesh defined by an `siMESH` object.

Syntaxe

```

fc_siplt.scatter(Th,u)
fc_siplt.scatter(Th,u,Name,Value,...)

```

Description

`fc_siplt.scatter(Th,u)` displays data `u` on all the (`Th.d`)-dimensional simplices elements of `Th`, a `siMESH` object. The data `u` is an 1D-array of size `Th.nq` or `Th.nqGlobal` or `Th.nqParent`.

`fc_siplt.scatter(Th,u,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.

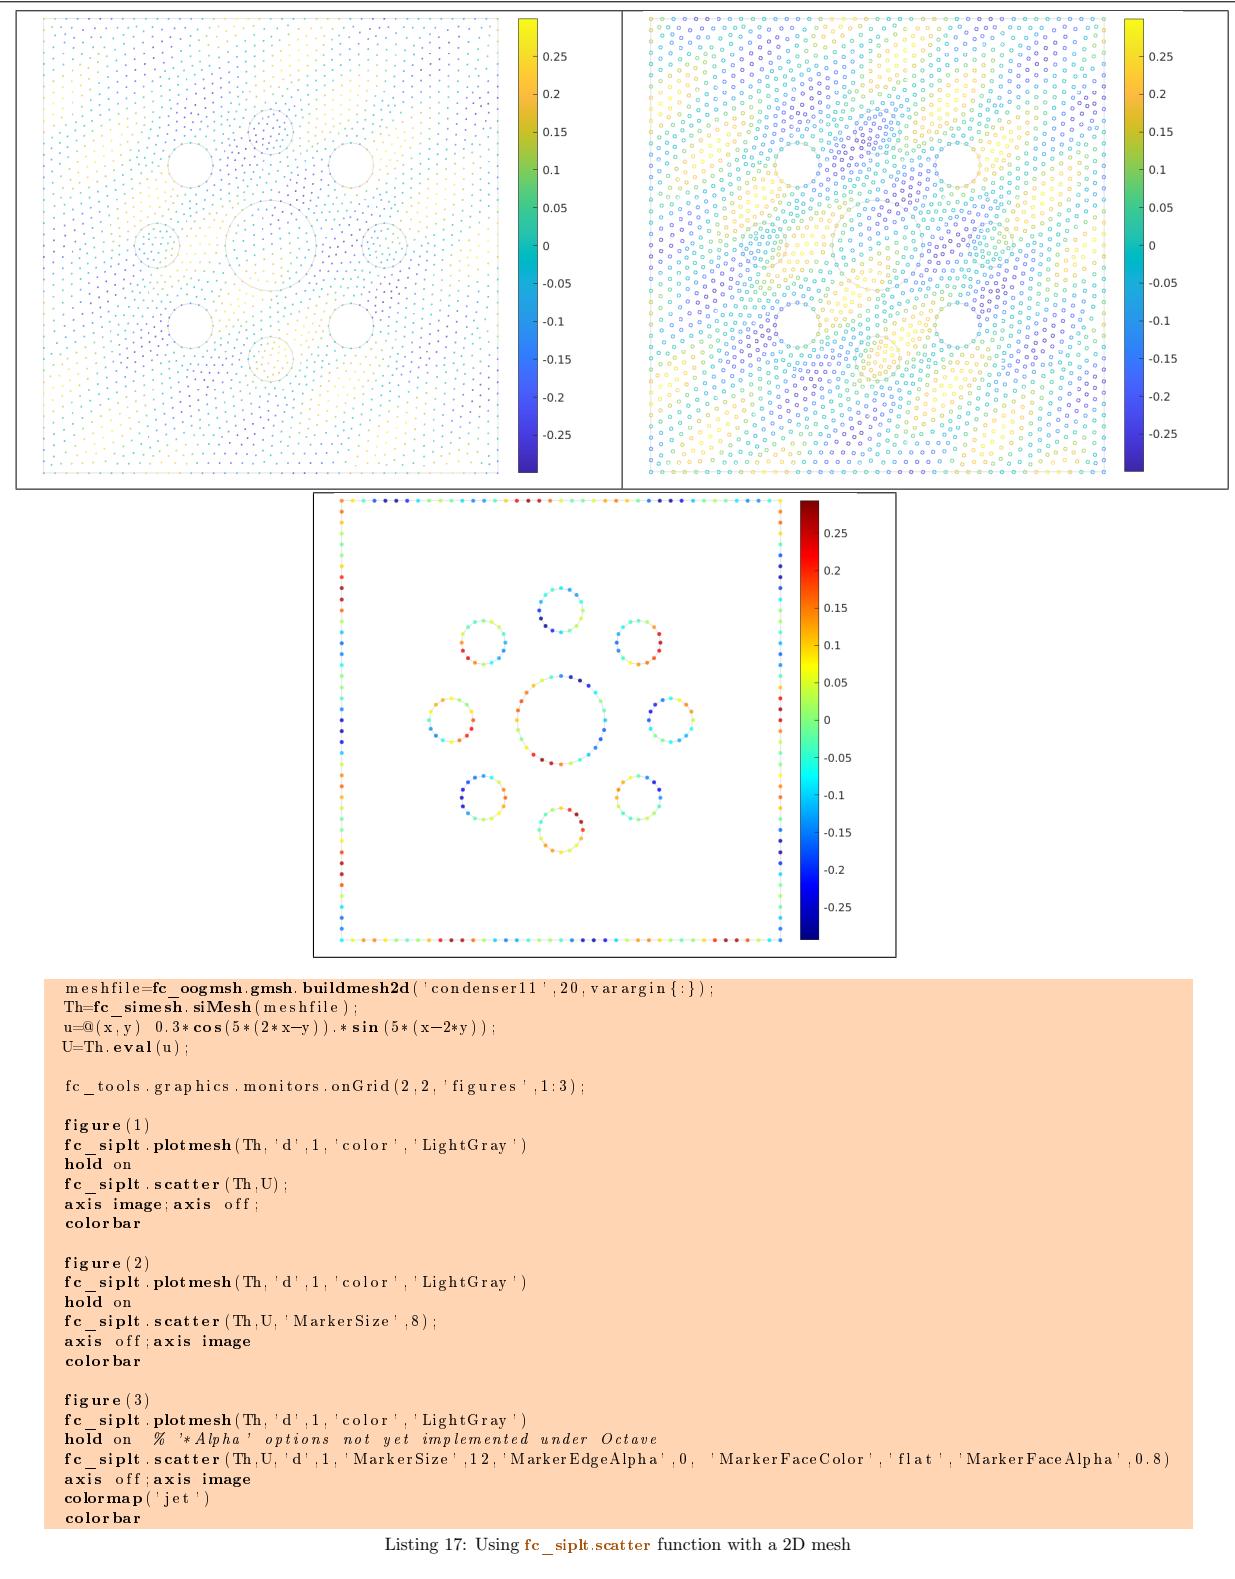

Options of first level are

- '`d`' : to specify the dimension of the simplices elements (default : `Th.d`)
- '`labels`' : to select the labels of the elements to display data,
- '`MarkerSize`' : size of the marker. Default is 1.
- '`ForcePatch`' : if `true`, uses `patch` function, otherwise uses `scatter` function in dimension 2 or `scatter3` function in dimension 3. Default is `false`.

The options of second level are those of the function used (see '`ForcePatch`' option).
