

fc tools Matlab toolbox, User's Guide*

version 0.0.34

François Cuvelier[†]

January 5, 2023

Abstract

The fc tools Matlab toolbox contains some basic tools used in my other toolboxes.

*LATEX manual, revision 0.0.34.a, compiled with Matlab 2022a, and toolbox fc-tools[0.0.34].

[†]LAGA, UMR 7539, CNRS, Université Paris 13 - Sorbonne Paris Cité, Université Paris 8, 99 Avenue J-B Clément, F-93430 Villetteuse, France, cuvelier@math.univ-paris13.fr

3	sys module	11

1 graphics module

1.1 main functions

1.1.1 `fc_tools.graphics.display_rgb` function

The `fc_tools.graphics.display_rgb` displays colors of a n -by-3 RGB colors array with their names if available.

Syntaxe

```
fc_tools.graphics.display_rgb(rgb)
fc_tools.graphics.display_rgb(rgb, names)
```

1.1.2 `fc_tools.graphics.selectColors` function

The `fc_tools.graphics.selectColors` function returns colors that are maximally perceptually distinct without using the Image Processing Toolbox.

This function is inspired by the function `select_colors` (or `distinguishable_colors`) of *Timothy E. Holy* which uses the Image Processing Toolbox of Matlab.

Syntaxe

```
colors=fc_tools.graphics.selectColors(N)
colors=fc_tools.graphics.selectColors(N, ...
    key, value)
```

Description

`colors=fc_tools.graphics.selectColors(N)` Returns **N** colors that are maximally perceptually distinct as a **N**-by-3 RGB colors array.

`colors=fc_tools.graphics.selectColors(N, Name, Value)` specifies function options using one or more **Name,Value** pair arguments. Options are

- **'background'** : the **N** colors selected will be as far as possible from the colors specified by this options as a *n*-by-3 RGB colors array. Default is `[1 1 1; 0 0 0; 0.8 0.8 0.8;1,0,1]`
- **'func'** : To specify an other function for converting RGB colors to LAB colors. Default is local `RGB2LAB` function.

1.1.3 `fc_tools.graphics.DisplayFigures` function

The `fc_tools.graphics.DisplayFigures` function regularly distributes the figures on the screen.

Syntaxe

```

fc_tools.graphics.DisplayFigures()
fc_tools.graphics.DisplayFigures(n)
fc_tools.graphics.DisplayFigures('nfig',n)

```

Without argument, all figures are regularly distributed on the screen. Otherwise, empty figures with numbers **1** to **n** are created and regularly distributed on the screen.

1.1.4 `fc_tools.graphics.SaveAllFigsAsFiles` function

The `fc_tools.graphics.SaveAllFigsAsFiles` saves all figures as files.

Syntaxe

```

fc_tools.graphics.SaveAllFigsAsFiles(basename)

```

```
fc_tools.graphics.SaveAllFigsAsFiles(file, ...
key, value, ...)
```

Description

`fc_tools.graphics.SaveAllFigsAsFiles(basename)` save each figure in the file
[basename, '_fig', fignum]

of the current directory where `fignum` is the number of the figure to be saved.

`fc_tools.graphics.SaveAllFigsAsFiles(file, key, value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options are

- '`format`' : to specify the file format. `Value` could be '`epsc`' (default), '`pdf`', '`png`' or '`pdflatex`'.
- '`dir`' : to specify the directory (default '`.`'). the directory is created if it does not exist.
- '`verbose`' : if `true`, prints file names. Default is `false`.
- '`tag`' : if `true` each figure is saved in the file:

```
[basename, '_fig', fignum, '_', software, version]
```

where `software` is Matlab and `version` is its release. Default is `false`.

- '`size`' : to specify size of the image. Default is [800,600].

1.2 xcolor submodule

1.2.1 `fc_tools.graphics.xcolor.get_themes` function

The `fc_tools.graphics.xcolor.get_themes` function returns available color themes.

```
Listing 4: example using fc_tools.graphics.xcolor.get_themes functions
themes=fc_tools.graphics.xcolor.get_themes()
```

Output

```
themes =
1x5 cell array
{'matlab'}  {'svg'}  {'X11'}  {'fullX11'}  {'wiki'}
```

1.2.2 `fc_tools.graphics.xcolor.get_from_theme` function

The `fc_tools.graphics.xcolor.get_from_theme` function returns names and RGB values of an available theme colors.

Listing 5: : example using `fc_tools.graphics.xcolor.get_from_theme` functions

```
[name,rgb]=fc_tools.graphics.xcolor.get_from_theme('X11');
whos name rgb
k=15;
fprintf('color\nname:\n',%s',...
    [%.6f,%.6f,%.6f]\n',name{k},rgb(k,1),rgb(k,2),rgb(k,3))
```

Output

Name	Size	Bytes	Class	Attributes
name	1x317	38932	cell	
rgb	317x3	7608	double	

```
color name : 'Bisque3', rgb=[0.804000,0.716000,0.620000]
```

1.2.3 `fc_tools.graphics.xcolor.svg` function

The `fc_tools.graphics.xcolor.svg` function returns names and RGB values of the 149 SVG colors.

Syntaxe

```
[name,rgb]=fc_tools.graphics.xcolor.svg()
```

`name` is cell array of string (color names) and `rgb` is 149-by-3 array (rgb values) such that the color `name{i}` has `rgb(i,:)` for rgb values.

1.2.4 `fc_tools.graphics.xcolor.X11` function

The `fc_tools.graphics.xcolor.X11` function returns names and RGB values of the 317 X11 colors.

Syntaxe

```
[name,rgb]=fc_tools.graphics.xcolor.X11()
```

`name` is cell array of string (color names) and `rgb` is 317-by-3 array (rgb values) such that the color `name{i}` has `rgb(i,:)` for rgb values.

1.2.5 `fc_tools.graphics.xcolor.fullX11` function

The `fc_tools.graphics.xcolor.fullX11` function returns names and RGB values of the 738 X11 colors.

Syntaxe

```
[name,rgb]=fc_tools.graphics.xcolor.fullX11()
```

`name` is cell array of string (color names) and `rgb` is 738-by-3 array (rgb values) such that the color `name{i}` has `rgb(i,:)` for rgb values.

1.3 monitors submodule

This module is **experimental** ...

1.3.1 fc_tools.graphics.monitors.onGrid function

The `fc_tools.graphics.monitors.onGrid` displays figures on a virtual m -by- n grid (as `subplot` command with axes) positioned on a selected monitor.

Syntaxe

```
fc_tools.graphics.monitors.onGrid(n,m)
fc_tools.graphics.monitors.onGrid(n,m, ...
    key,value, ...)
```

Description

`fc_tools.graphics.monitors.onGrid(n,m)`

A virtual m -by- n grid is created on the first monitor and the figures numbered from 1 to $m \times n$ are moved or created (if it doesn't exist) respectively to the position given by an index (default is the figure number). This index runs row-wise; all columns of the first row are numbered from left to right and so on with rows 2 to m .

`fc_tools.graphics.monitors.onGrid(n,m, key,value)` specifies function options using one or more `key,value` pair arguments. Options are

- '`figures`' : specifies the numbers of the figures to be used. Default is `1:m*n`.
- '`positions`' : specifies the index on the grid corresponding to the '`figures`' option. Default is `1:m*n`.

```

1 x=0:pi/100:2*pi;
2 close all
3 fc_tools.graphics.monitors.onGrid(2,3,'figures',[1,3], ...
    'positions',[2,6],'covers',4/5)
4 figure(1)
5 plot(x,sin(x))
6 figure(3)
7 plot(x,cos(x))
8 fc_tools.graphics.monitors.onGrid(2,3,'figures',[2,4], ...
    'positions',[1,5],'covers',4/5)
9 figure(2)
10 plot(sin(x),cos(x))
11 axis equal
12 figure(4)
13 plot(2*sin(x),cos(x))
14 axis equal
15 fprintf('waiting 2s...\n');pause(2)
16 fc_tools.graphics.monitors.onGrid(2,2,'figures',1:4,'covers',4/5, ...
    'location','NorthWest')

```

Listing 6: Using `fc_tools.graphics.monitors.onGrid` function, part of `fc_tools.graphics.monitors.demos.demo02` function. Figures are screenshot taken at line 15 (left) and after last line (right).

1.3.2 `fc_tools.graphics.monitors.show` function

The `fc_tools.graphics.monitors.show` displays monitors with their resolution, position and number on a figure. When arguments are provided, they are those of the `fc_tools.graphics.monitors.onGrid` function and then the grid is also drawn with the indices of the positions of the grid elements.

Syntax

```

fc_tools.graphics.monitors.show()
fc_tools.graphics.monitors.show(n,m)
fc_tools.graphics.monitors.show(n,m, ...
    key,value, ...)

```

Description

`fc_tools.graphics.monitors.show()`

Displays monitors with their resolution, position and number on a figure.

`fc_tools.graphics.monitors.show(n,m)`

Add the `m`-by-`n` grid on the figure created by the `fc_tools.graphics.monitors.show()` command to to preview positions of figures created or moved by the `fc_tools.graphics.monitors.onGrid(n,m)` command.

```
fc_tools.graphics.monitors.show(n,m, key,value)
```

specifies function options using one or more `key,value` pair arguments.
Options are those of the `fc_tools.graphics.monitors.onGrid` function.

```
1 close all
2 nM=fc_tools.graphics.monitors.number();
3 figure(1)
4 fc_tools.graphics.monitors.show(3,3,'monitor',1,'covers',1)
5 if nM>=2
6 figure(2)
7 fc_tools.graphics.monitors.show(4,3,'monitor',2, ...
     'location','east','covers',3/4)
8 end
9 if nM>=3
10 figure(3)
11 fc_tools.graphics.monitors.show(3,2,'monitor',3, ...
     'location','topleft','covers',3/4)
12 end
```

Listing 7: Using `fc_tools.graphics.monitors.show` function, part of `fc_tools.graphics.monitors.demos.demo03` function on a computer with two monitors.

```
1 close all
2 nM=fc_tools.graphics.monitors.number();
3 figure(1)
4 fc_tools.graphics.monitors.show(3,3,'monitor',1,'covers',1)
5 if nM>=2
6 figure(2)
7 fc_tools.graphics.monitors.show(4,3,'monitor',2, ...
     'location','east','covers',3/4)
8 end
9 if nM>=3
10 figure(3)
11 fc_tools.graphics.monitors.show(3,2,'monitor',3, ...
     'location','topleft','covers',3/4)
12 end
```

Listing 8: Using `fc_tools.graphics.monitors.show` function, part of `fc_tools.graphics.monitors.demos.demo03` function on a computer with three monitors.

1.4 gptoolbox submodule

This submodule contains some files of the **gptoolbox** from *Alec Jacobson* (see <https://github.com/alecjacobson/gptoolbox>)

1.5 crop submodule

This submodule contains the function `crop` from *Andrew Bliss*.

1.6 vfield3 submodule

This submodule contains the function `vfield3` from *M MA* (see <https://www.mathworks.com/matlabcentral/fileexchange/8653-vfield3>)

2 utils module

- `fc_tools.utils.deleteCellOptions` deletes specified key/value pairs in a cell array of key/value pairs.
- `fc_tools.utils.isfunHandle` test if the input argument is a function handle.
- `fc_tools.utils.funHandleName` test if the input argument is a function handle.
- `fc_tools.utils.fun2str ...`

3 sys module

- `fc_tools.sys.getComputerName()` returns the name of the computer as a string.
- `fc_tools.sys.getUserName()` returns the name (login) of the current user as a string.
- `fc_tools.sys.getRAM()` returns available memory (RAM) in GB of the computer.
- `fc_tools.sys.getCPUInfo()` returns CPU(s) informations as a structure.
- `fc_tools.sys.getOSinfo()` returns OS informations as a structure.
- `fc_tools.sys.isdir()` return true if a folder exists.
- `fc_tools.sys.isfileexists()` return true if a file exists.

In Listing 9, some examples are provided.

Listing 9: : example using `fc_tools.sys` functions

```
fprintf('RAM: %.2f GB\n', fc_tools.sys.getRAM())
CPU= fc_tools.sys.getCPUInfo()
OS=fc_tools.sys.getOSInfo()
```

Output

```
RAM : 13.60 GB
CPU =
    struct with fields:
        name: 'AMD Ryzen 5 3500U with Radeon Vega Mobile Gfx'
        nthreadspercore: 2
        ncoreperproc: 4
        nprocs: 1

OS =
    struct with fields:
        distributor: 'Ubuntu'
        description: 'Ubuntu 22.04.1 LTS'
        release: '22.04'
        codename: 'jammy'
        arch: 'x86_64'
        shortname: 'Ubuntu'
```
