

# fc graphics4mesh Octave package, User's Guide\*

version 0.1.7

François Cuvelier<sup>†</sup>

January 28, 2025

## Abstract

This Octave package allows to display simplicial meshes or datas on simplicial meshes. A simplicial mesh must be given by two arrays : the vertices array and the connectivity array.

## 1 Introduction

---

The **experimental** Octave package uses internal functions for displaying simplicial meshes or datas on simplicial meshes. Simplicial meshes could be:

- a triangular mesh in dimension 2, made with 2-simplices (ie. triangles),
- a tetrahedral mesh in dimension 3, made with 3-simplices (ie. tetrahedron),
- a triangular mesh in dimension 3 (surface mesh), made with 2-simplices,
- a line mesh in dimension 2 or 3 made with 1-simplices (ie. lines).

A simplicial mesh is given by its vertices array  $q$  and its connectivity array  $me$ . For demonstration purpose, some simplicial meshes are given in this package. They can be load by using the function `getMesh2D`, `getMesh3D` or `getMesh3Ds` of the `fc_graphics4mesh` package.

## 2 Installation

---

to do ...

## 3 Mesh

---

The functions `getMesh2D`, `getMesh3D` and `getMesh3Ds` return a mesh vertices array  $q$ , a mesh elements connectivity array associated with the input argument  $d$  (simplex dimension) and the indices array `toGlobal`. The vertices array  $q$  is a  $dim$ -by- $n_q$  array where  $dim$  is the space dimension (2 or 3) and  $n_q$  the number of vertices. The connectivity array  $me$  is a  $(d+1)$ -by- $n_{me}$  array where  $n_{me}$  is the number of mesh elements and  $0 \leq d \leq dim$  is the simplicial dimension:

- $d = 0$ : points,
- $d = 1$ : lines,
- $d = 2$ : triangle,
- $d = 3$ : tetrahedron.

So we can use theses functions to obtain

- 3D mesh: `getMesh3D(3)` (*main* mesh), `getMesh3D(2)`, `getMesh3D(1)`, `getMesh3D(0)`,
- 3D surface mesh: `getMesh3Ds(2)` (*main* mesh), `getMesh3Ds(1)` , `getMesh3Ds(0)`,
- 2D mesh: `getMesh2D(2)` (*main* mesh), `getMesh2D(1)`, `getMesh2D(0)`.

For example,

- `[q3,me3,toGlobal3]=fc_meshtools.simplicial.getMesh3D(3)` return a 3-simplicial mesh (*main* mesh) in space dimension  $dim = 3$ ,
- `[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMesh3D(2)` return a 2-simplicial mesh in space dimension  $dim = 3$ .

The third output are indices of the vertices in the *main* mesh:

`q3(:,toGlobal2) == q2`

## 4 fc\_graphics4mesh.plotmesh function

---

The function `fc_graphics4mesh.plotmesh` displays a mesh given by

### Syntaxe

```
fc_graphics4mesh.plotmesh(q,me)
fc_graphics4mesh.plotmesh(q,me,Name,Value, ...)
```

## Description

`plotmesh(q,me)` displays all the Th.d-dimensional simplices elements.

`plotmesh(q,me,Name,Value, ...)` specifies function options using one or more Name,Value pair arguments. Options of first level are

- 'color' : to specify the color of the displayed mesh elements. (default : 'blue'),
- 'cutPlane' : (only for simplices in dimension 3) cut mesh by  $n$  planes given by  $n$ -by-4 array  $P$  where the equation of the  $i$ -th cut plane is given by

$$P(i,1)x + P(i,2)y + P(i,3)z + P(i,4) = 0.$$

The normal vector  $P(i,1:3)$  pointed to the part of the mesh not displayed. default : [] (no cut).

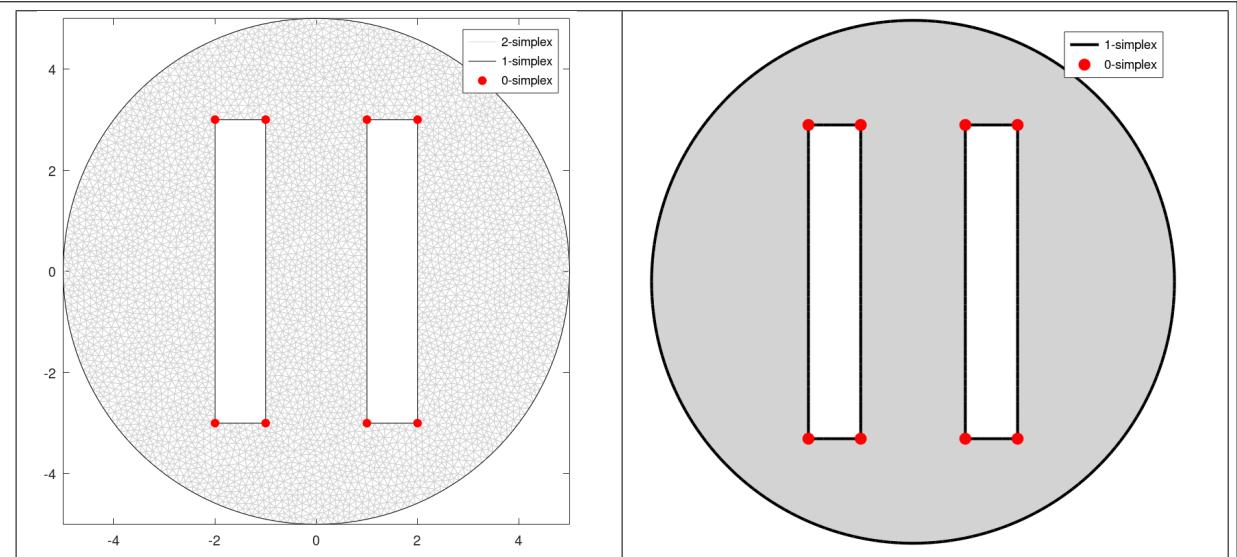

- 'inLegend' : to add this mesh in a legend if `true`. Default is `false`.
- 'DisplayName' : to specify the name used in a legend for this mesh. Then the ('inLegend' option is forced to `true`.

The options of second level depend on the type of elementaries mesh elements to represent.

One can use any option of the following functions according to the type of  $d$ -simplex to be represented.

- In dimension 3,
  - if  $d == 3$ , `patch` function is used,
  - if  $d == 2$ , `trimesh` function is used,
  - if  $d == 1$ , `plot3` function is used,
  - if  $d == 0$ , `plot3` function is used,
- In dimension 2,
  - if  $d == 2$ , `trimesh` or `patch` function is used,
  - if  $d == 1$ , `plot` function is used,
  - if  $d == 0$ , `plot` function is used,
- In dimension 1,
  - if  $d == 1$ , `line` function is used,
  - if  $d == 0$ , `plot` function is used,

**2D example :** the following code is part of the `fc_graphics4mesh.demos.plotmesh2D` function.

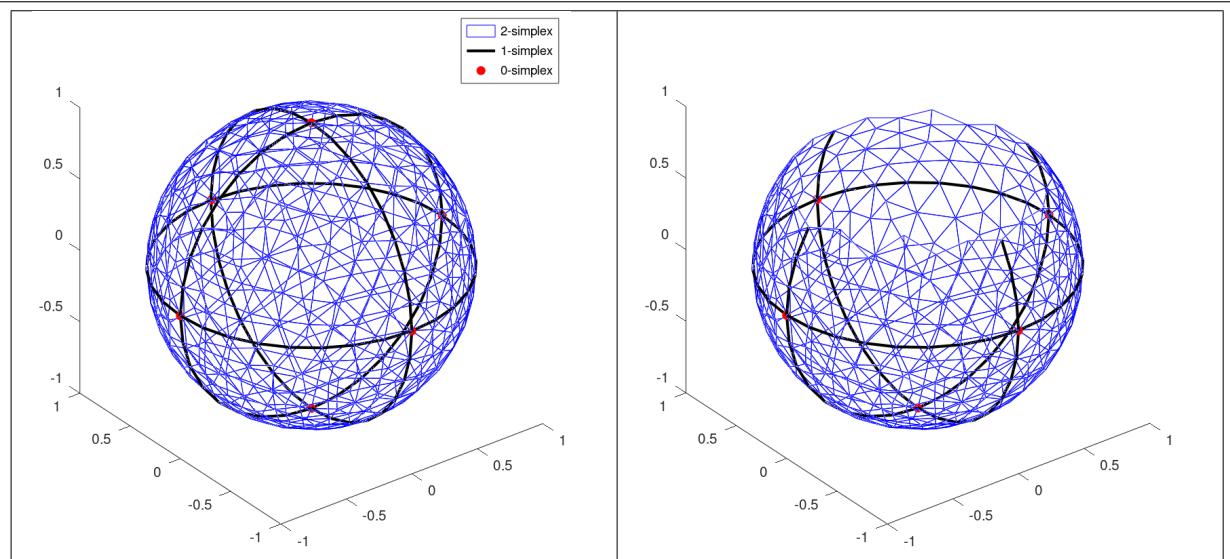

```
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMesh2D(2);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMesh2D(1);
[q0,me0,toGlobal0]=fc_meshtools.simplicial.getMesh2D(0);

Listing 3: Using `fc_graphics4mesh.plotmesh` function with a 3D mesh

## 5 fc\_graphics4mesh.plot function

The function `fc_graphics4mesh.plot` displays data on a mesh given by its vertices array `q` and its connectivity array `me`.

### Syntax

```
fc_graphics4mesh.plot(q,me,u)
fc_graphics4mesh.plot(q,me,u,Name,Value, ...)
```

### Description

`plot(q,me,u)` displays data `u` on a simplicial mesh. The data `u` can be an handle function or an array.

`plot(q,me,u,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- `'cutPlane'` : (only for simplices in dimension 3) cut mesh by  $n$  planes given by  $n$ -by-4 array  $P$  where the equation of the  $i$ -th cut plane is given by

$$P(i,1)x + P(i,2)y + P(i,3)z + P(i,4) = 0.$$

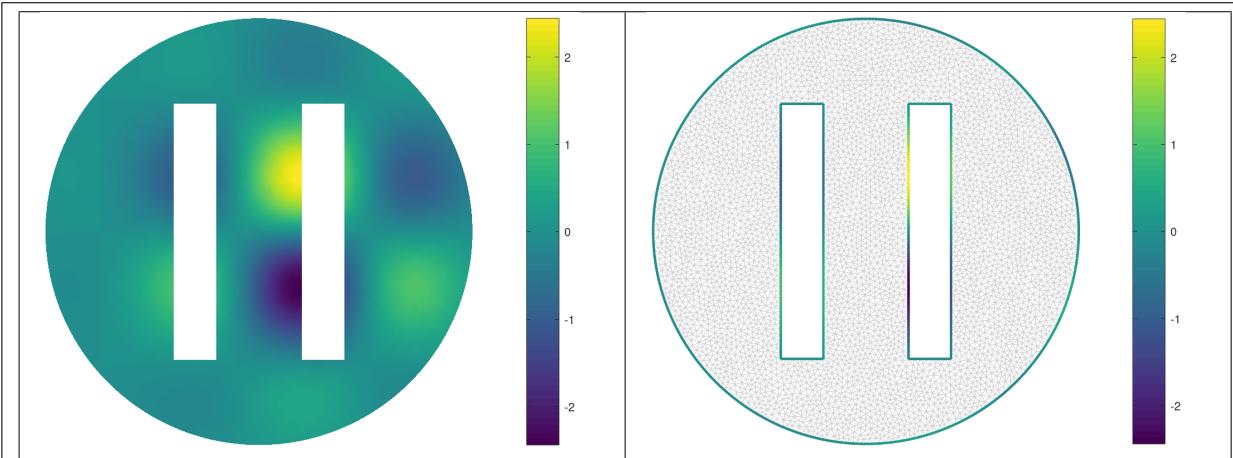

The normal vector  $P(i,1:3)$  pointed to the part of the mesh not displayed. default : `[]` (no cut).

The options of second level depend on the type of elementaries mesh elements to represent.

One can use any option of the following functions according to the type of  $d$ -simplex to be represented.

- In dimension 3, `patch` function is used.
- In dimension 2,
  - if  $d == 2$ , `surf` or `patch` (option `'plane'` to `true`) function is used,
  - if  $d == 1$ , `patch` function is used,
- In dimension 1, `plot` function is used.

**2D example :** the following code is part of the `fc_graphics4mesh.demos.plot2D` function.

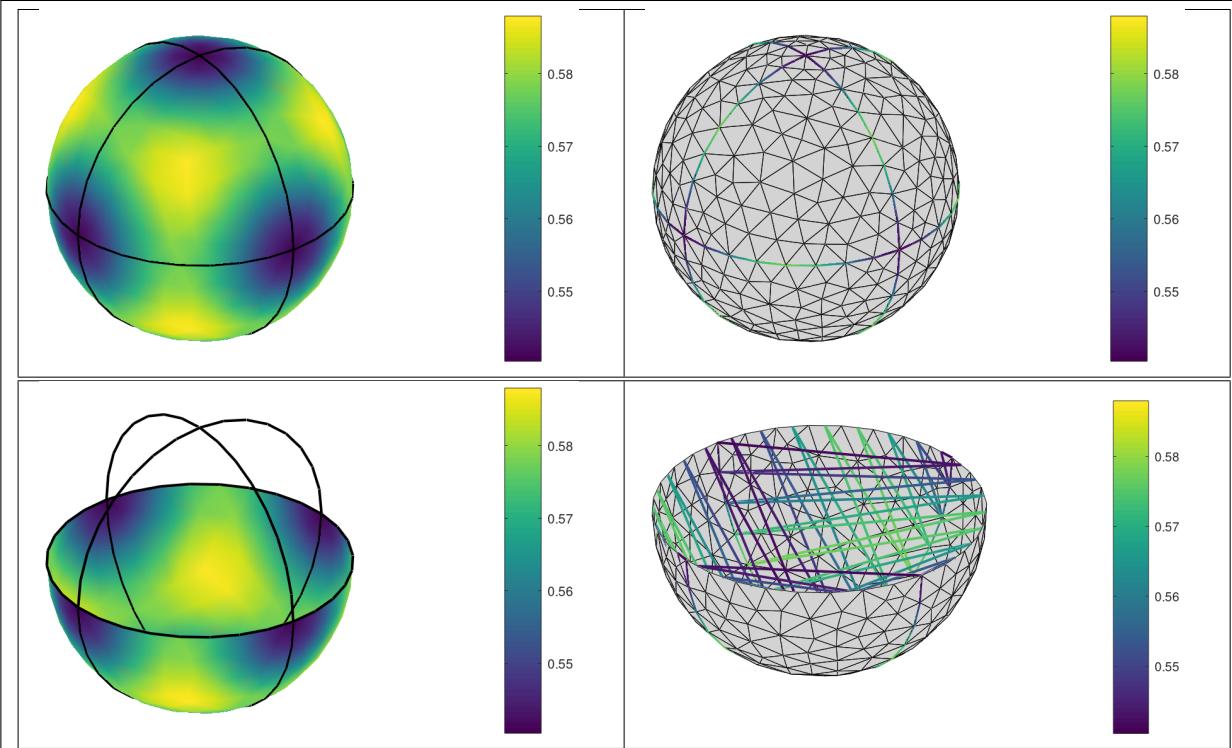

```
u=@(x,y) 3*exp(-((x-1).^2+y.^2)/10).*cos(x-1).*sin(y);
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('2D',1);
U2=fc_meshtools.eval(u,q2);
figure(1)

## 6 `fc_graphics4mesh.plotiso` function

The function `fc_graphics4mesh.plot` displays isolines from datas on a 2-simplicial mesh given by its vertices array `q` and its connectivity array `me`.

## Syntax

```
fc_graphics4mesh.plotiso(q,me,u)
fc_graphics4mesh.plotiso(q,me,u,Name,Value, ...)
```

## Description

`plotiso(q,me,u)` displays isolines from datas on the 2-simplicial mesh given by the vertices array `q` and the connectivity array `me`. The data `u` can be an handle function or an array.

`plotiso(q,me,u,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- `'nis0'` : to specify the number of isolines (default : 10)
- `'isorange'` : to specify the list of isovalues (default : empty)
- `'isocolorbar'` : if `true`, colorbar with isovalues is drawn (default : `false`)
- `'format'` : to specify the format of the isovalues on the colorbar (default : `'%g'`)
- `'plane'` : if `true`, isolines are in the  $xy$ -plane, otherwise isolines are in 3D with  $z$ -value set to `u` (default : `false`)
- `'color'` : to specify one color for all isolines (default : empty)

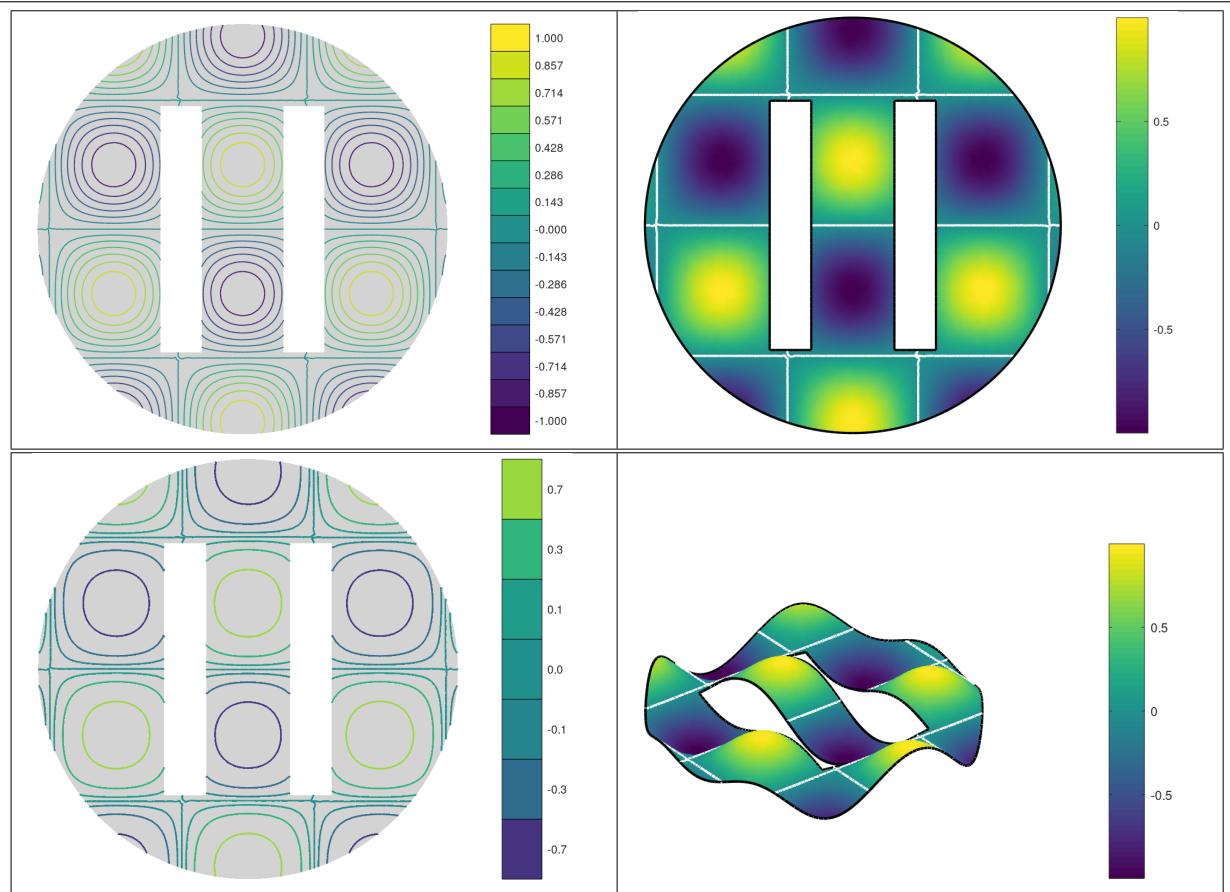

The options of second level are all options of

- `plot3` function in dimension 3 or in dimension 2 with `'plane'` option set to `false`
- `plot` function in 2 with `'plane'` option set to `true`

This function accepts until 3 output arguments :

- 1st output is the colors of the isolines
- 2nd output is the isovalues of the isolines
- 3th output is all the handles of the isolines as an 2D-array of dimension N-by-niso, where N is the number of 2-simplex elementary meshes where isolines are drawn.

**2D example :** the following code is part of the `fc_graphics4mesh.demos.plotiso2D` function.

```

u=@(x,y) cos(x).*sin(y);
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMesh2D(2);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMesh2D(1);
U2=fc_meshtools.eval(u,q2);
U1=fc_meshtools.eval(u,q1);

figure(1)
fc_graphics4mesh.plotmesh(q2,me2,'color','LightGray','fill',true,'EdgeColor','None','FaceColor','LightGray')
hold on
fc_graphics4mesh.plotiso(q2,me2,U2,'plane',true,'niso',15,'isocolorbar',true,'format','%.3f','LineWidth',1)
axis image;axis off

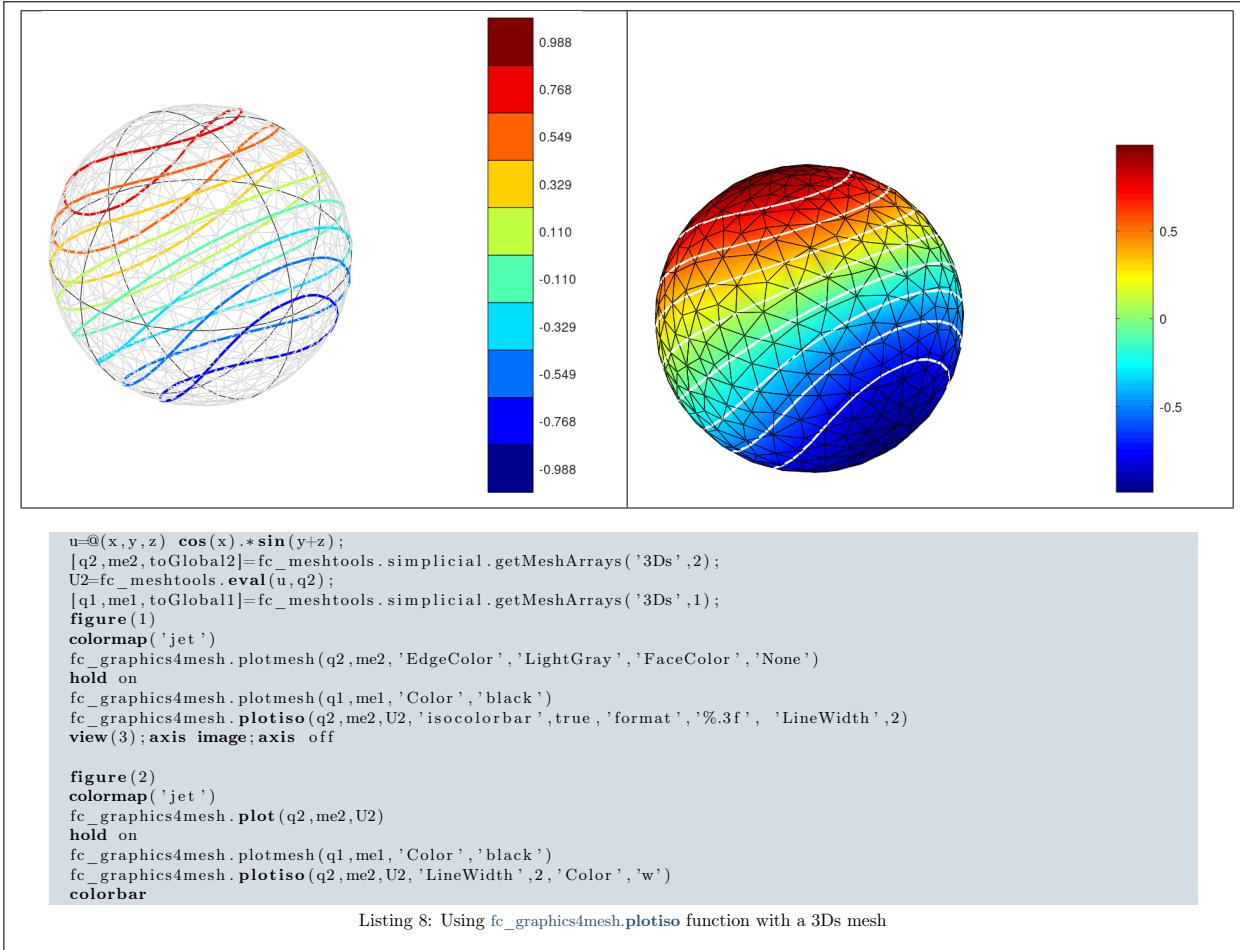

figure(2)
fc_graphics4mesh.plot(q2,me2,U2,'plane',true)
hold on
fc_graphics4mesh.plotiso(q2,me2,U2,'plane',true,'Color','w','isorange',0,'LineWidth',2)
fc_graphics4mesh.plotmesh(q1,me1,'LineWidth',2,'Color','k')
colorbar
shading interp
axis image;axis off

figure(3)
fc_graphics4mesh.plotmesh(q2,me2,'z',U2,'fill',true,'Color','LightGray')
hold on
isorange=[-0.7,-0.3,-0.1,0,0.1,0.3,0.7];
fc_graphics4mesh.plotiso(q2,me2,U2,'LineWidth',2,'isorange',isorange,'isocolorbar',true,'format','%.1f')
axis image;axis off
figure(4)
fc_graphics4mesh.plot(q2,me2,U2)
hold on
fc_graphics4mesh.plotiso(q2,me2,U2,'LineWidth',2,'Color','w','isorange',0,'LineWidth',2)
fc_graphics4mesh.plotmesh(q1,me1,'z',U1,'LineWidth',2,'Color','k')
axis image;axis off
shading interp

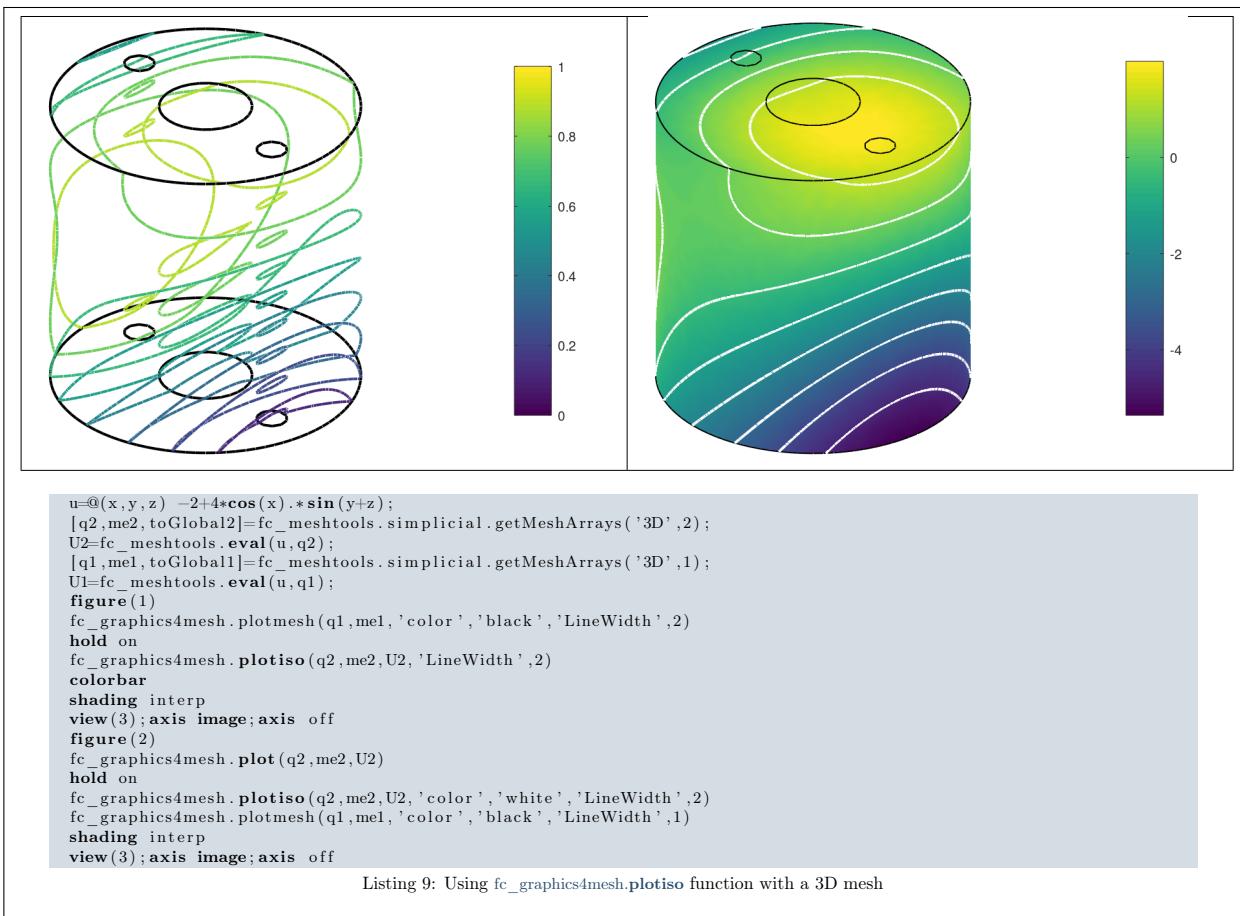

```

Listing 7: Using `fc_graphics4mesh.plotiso` function with a 2D mesh

**3Ds example :** the following code is part of the `fc_graphics4mesh.demos.plotiso3Ds` function.

**3D example :** the following code is part of the `fc_graphics4mesh.demos.plotiso3D` function.

## 7 fc\_graphics4mesh.slicemesh function

The `fc_graphics4mesh.slicemesh` function displays intersection of a plane and a 3D mesh given by its vertices array `q` and its connectivity array `me`.

### Syntax

```
fc_graphics4mesh.slicemesh(q,me,P)
fc_graphics4mesh.slicemesh(q,me,P,Name,Value, ...)
```

### Description

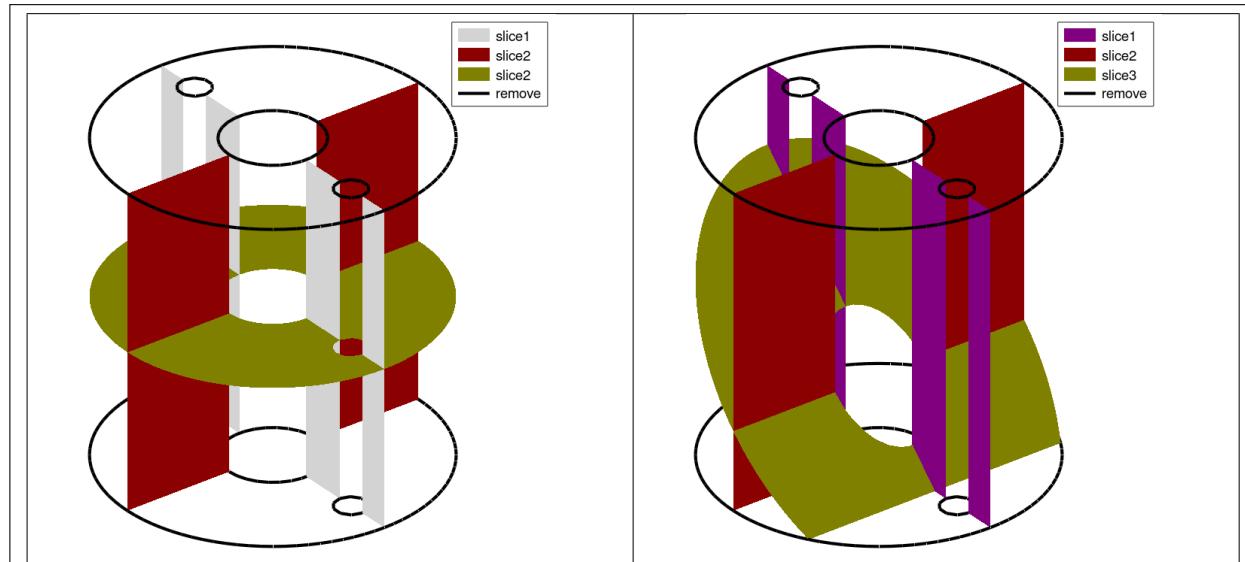

`slicemesh(q,me,P)` displays intersection of the plane defined by  $P(1)x + P(2)y + P(3)z + P(4) = 0$  and all the 3-dimensional simplices elements given by `q` and `me` arrays. To compute `P` one can use the `fc_tools.graphics.PlaneCoefs` function of the `fc-tools` package. The 1-by-4 array `P`, is obtained with `P=fc_tools.graphicsPlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it. One can also used a  $n$ -by-4 array `P` where each line define a plane.

`slicemesh(q,me,P,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.  
Options of first level are

- `'color'` : to specify the slice color (default : `'LightGray'`, `rgb=[0.9,0.9,0.9]` )

The options of second level are all options of the `patch` function except `'FaceColor'` and `'EdgeColor'`

**3D example :** the following code is part of the `fc_graphics4mesh.demos.slicemesh3D` function.

```
[q3,me3,toGlobal3]=fc_meshtools.simplicial.getMeshArrays('3D',3);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('3D',1);
figure(1)
P=fc_tools.graphics.PlaneCoefs([0 0 1],[1 0 0]);% ...
fc_graphics4mesh.slicemesh(q3,me3,P,'DisplayName','slice1')
hold on
P=fc_tools.graphics.PlaneCoefs([0 0 1],[0 1 0]);% ...
fc_graphics4mesh.slicemesh(q3,me3,P,'Color','DarkRed','DisplayName','slice2')
P=fc_tools.graphics.PlaneCoefs([0 0 1],[0 0 1]);% ...
fc_graphics4mesh.slicemesh(q3,me3,P,'Color','Olive','DisplayName','slice2')
fc_graphics4mesh.plotmesh(q1,me1,'color','k','LineWidth',2)
view(3);axis off; axis image
legend('show')
figure(2)
P=[fc_tools.graphics.PlaneCoefs([0 0 1/2],[1 0 0]); ...
    fc_tools.graphics.PlaneCoefs([0 0 1/2],[0 1 0]); ...
    fc_tools.graphics.PlaneCoefs([0 0 1/2],[0 -1 1])];
fc_graphics4mesh.slicemesh(q3,me3,P,'Color',{'Purple','DarkRed','Olive'}, ...
'DisplayName',{'slice1','slice2','slice3'})
hold on
fc_graphics4mesh.plotmesh(q1,me1,'color','k','LineWidth',2)
view(3);axis off; axis image
```

Listing 10: Using `fc_graphics4mesh.slicemesh` function with a 3D mesh

## 8 fc\_graphics4mesh.slice function

The `fc_graphics4mesh.slice` function displays intersection of a plane and a 3D mesh given by its vertices array `q` and its connectivity array `me`.

### Syntaxe

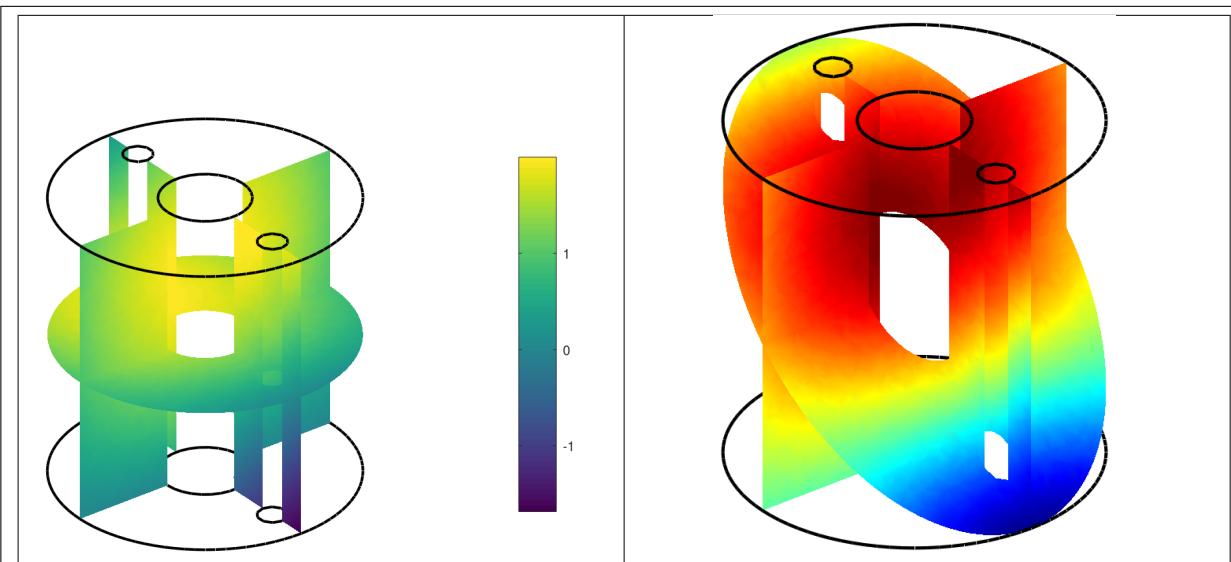

```
fc_graphics4mesh.slice(q,me,u,P)
fc_graphics4mesh.slice(q,me,u,P,Name,Value, ...)
```

### Description

`slice(q,me,u,P)` displays data on the intersection of the plane defined by  $P(1)x + P(2)y + P(3)z + P(4) = 0$  and all the 3-dimensional simplices elements given by `q` and `me` arrays. To compute `P` one can use the `fc_tools.graphics.PlaneCoefs` function of the `fc-tools` package. The array `P`, is obtained with `P=fc_tools.graphicsPlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it. One can also used a  $n$ -by-4 array `P` where each line define a plane.

`slice(q,me,u,P,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments which are those of the `patch` function excepts '`FaceColor`' and '`EdgeColor`'.

**3D example :** the following code is part of the `fc_graphics4mesh.demos.slice3D` function.

```
u=@(x,y,z) 2*cos(x).*sin(y+z);
[q3,me3,toGlobal3]=fc_meshtools.simplicial.getMeshArrays('3D',3);
U3=fc_meshtools.eval(u,q3);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('3D',1);

figure(1)
P=fc_tools.graphics.PlaneCoefs([0 0 1],[1 0 0]);
fc_graphics4mesh.slicemesh(q3,me3,P)
hold on
fc_graphics4mesh.slice(q3,me3,U3,P)
P=fc_tools.graphics.PlaneCoefs([0 0 1],[0 1 0]);
fc_graphics4mesh.slice(q3,me3,U3,P)
P=fc_tools.graphics.PlaneCoefs([0 0 1],[0 0 1]);% ...
fc_graphics4mesh.slice(q3,me3,U3,P)
fc_graphics4mesh.plotmesh(q1,me1,'color','k','LineWidth',2)
view(3);axis off; axis image
colorbar

figure(2)
P=[fc_tools.graphics.PlaneCoefs([0 0 1],[1 0 0]); ...
    fc_tools.graphics.PlaneCoefs([0 0 1],[0 1 0]); ...
    fc_tools.graphics.PlaneCoefs([0 0 1],[0 -1 1])];
colormap('jet')
fc_graphics4mesh.slice(q3,me3,u,P)
hold on
fc_graphics4mesh.plotmesh(q1,me1,'color','k','LineWidth',2)
```

Listing 11: Using `fc_graphics4mesh.slice` function with a 3D mesh

## 9 fc\_graphics4mesh.sliceiso function

The `fc_graphics4mesh.sliceiso` function displays isolines of datas on the intersection of a plane and a 3D mesh given by its vertices array `q` and its connectivity array `me`.

### Syntaxe

```
fc_graphics4mesh.sliceiso(q,me,u,P)
fc_graphics4mesh.sliceiso(q,me,u,P,Name,Value, ...)
```

### Description

`sliceiso (q,me,u,P)` displays isolines of data `u` on the intersection of the plane defined by  $P(1)x + P(2)y + P(3)z + P(4) = 0$  and all the 3-dimensional simplices elements given by `q` and `me` arrays. To compute `P` one can use the `fc_tools.graphics.PlaneCoefs` function of the `fc-tools` package. The 1-by-4 array `P`, is obtained with `P=fc_tools.graphicsPlaneCoefs(Q,V)` where `Q` is a point in the plane and `V` is a vector orthogonal to it. One can also used a  $n$ -by-4 array `P` where each line define a plane.

`sliceiso (q,me,u,P,Name,Value, ...)` allows additional key/value pairs to be used when displaying `u`. The key strings could be

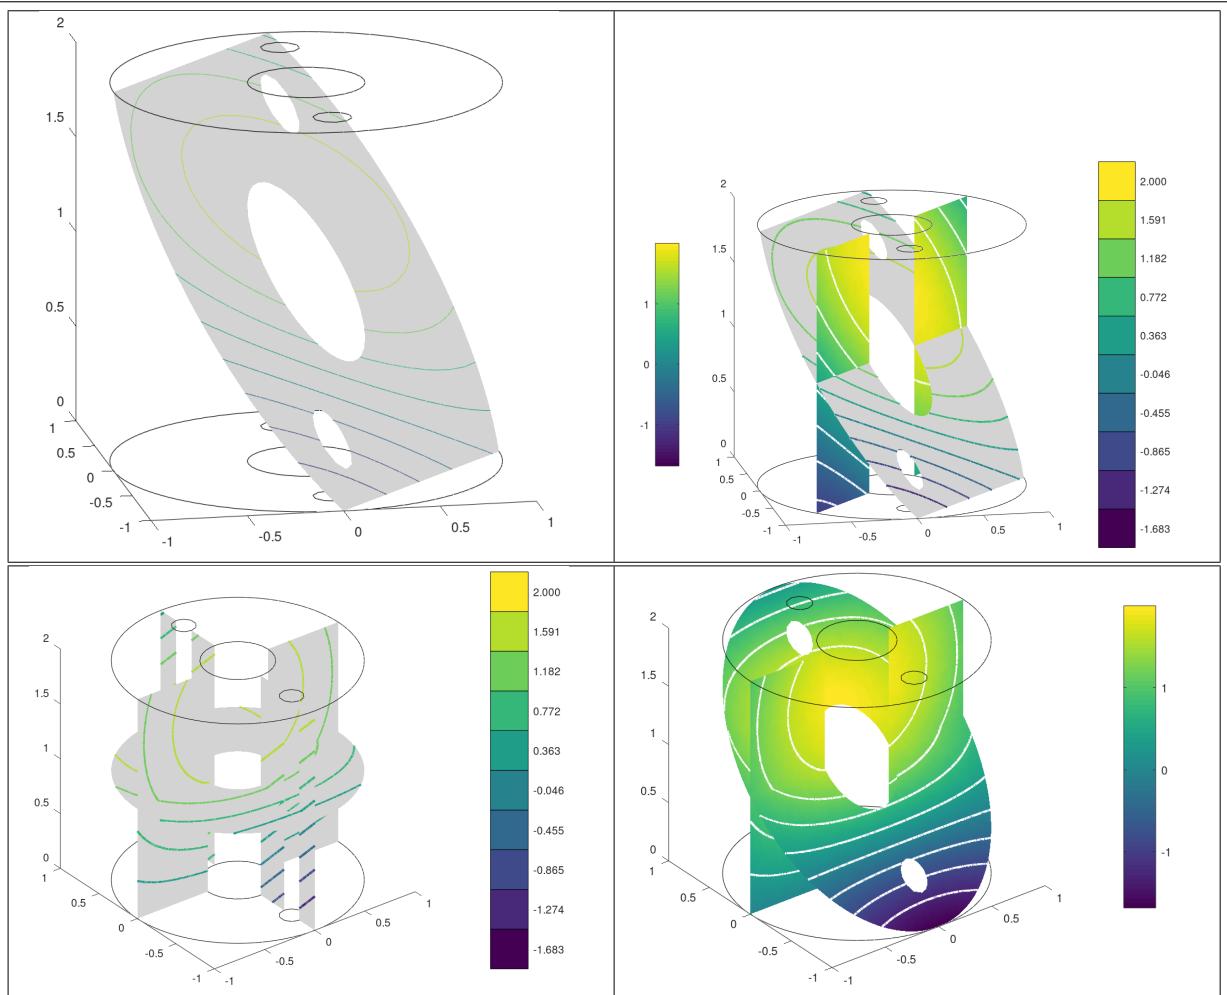

- 'niso' : to specify the number of isolines (default : 10)
- 'isorange' : to specify the list of isovalues (default : empty)
- 'color' : to specify one color for all isolines (default : empty)
- 'isocolorbar' : if true display a colorbar. Default is false.
- 'format' : to specify the format of the isovalues print in the colorbar. Default is '%g'.

For key strings, one could also used any options of the `plot3` function.

This function accepts until 4 output arguments :

- 1st output is the colors of the isolines
- 2nd output is the isovalues of the isolines
- 3th output is the handle of the colobar iso.
- 4th output is all the handles of the isolines as an 2D-array of dimension N-by-niso, where N is the number of elementary meshes where isolines are drawn.

**3D example :** the following code is part of the `fc_graphics4mesh.demos.sliceiso3D` function.

```

u=@(x,y,z) 2*cos(x).*sin(y+z);
[q3,me3,toGlobal3]=fc_meshtools.simplicial.getMeshArrays('3D',3);
U3=fc_meshtools.eval(u,q3);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('3D',1);

Listing 12: Using `fc_graphics4mesh.sliceiso` function with a 3D mesh

## 10 fc\_graphics4mesh.plotquiver function

The function `fc_graphics4mesh.plotquiver` displays vector field datas on a mesh given by its vertices array `q` and its connectivity array `me`.

### Syntax

```
fc_graphics4mesh.plotquiver(q,me,V)
fc_graphics4mesh.plotquiver(q,me,V,Name,Value, ...)
```

### Description

`plotquiver(q,me,V)` displays vector field `u` on a simplicial mesh. The vector field data `u` can be a 1-by-dim cell arrays of handle functions or an dim-by- $n_q$  array.

`plotquiver(q,me,V,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.

Options of first level are

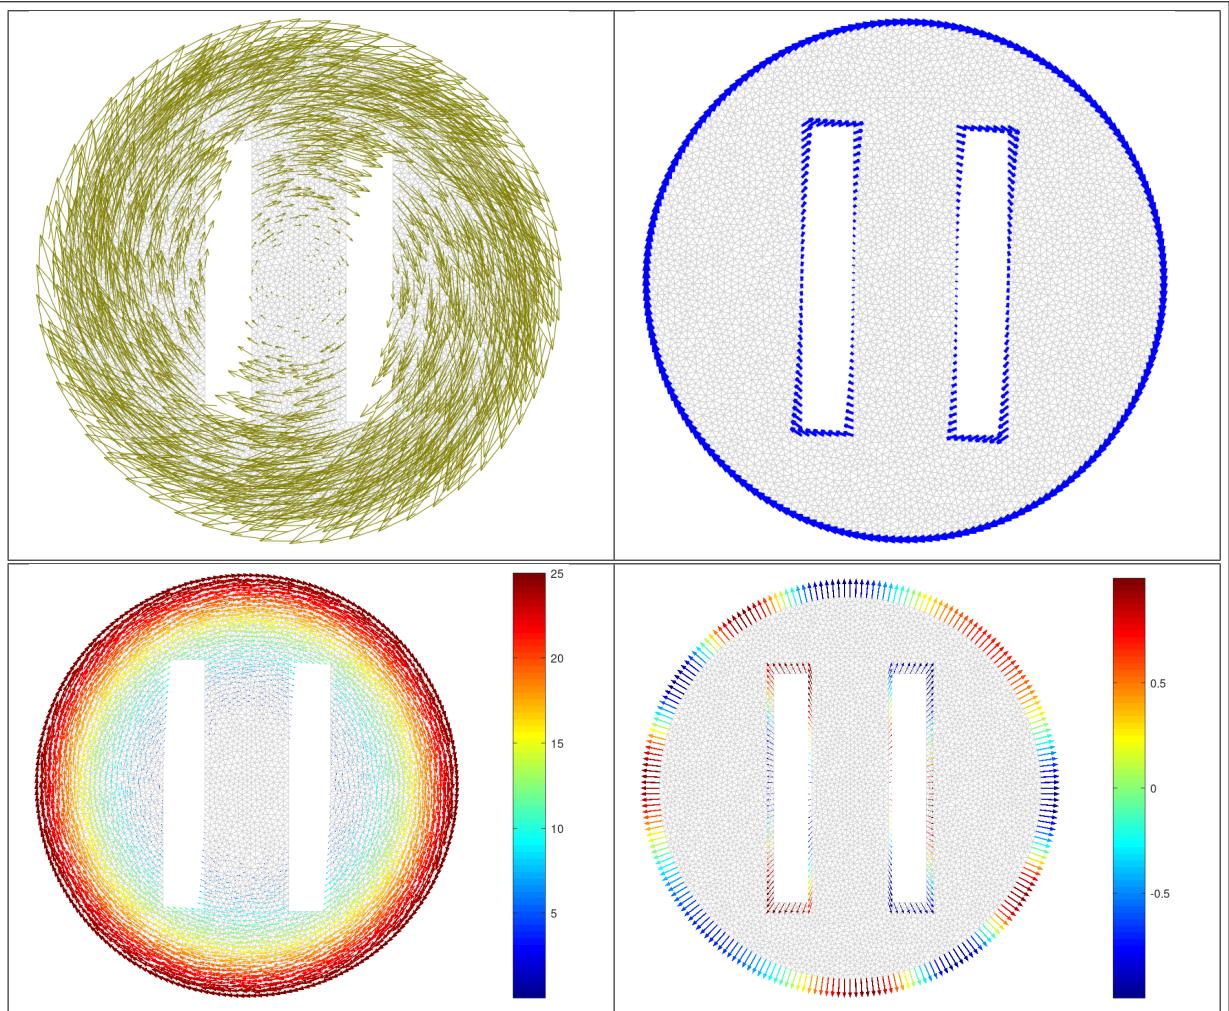

- `'freq'` : quiver frequencie, (default : 1)
- `'scale'` : quiver scale, (default is `fc_meshtools.getCharacteristicLength(q)/20`)
- `'color'` : set one color for all quivers (default: default color of the `quiver` or `quiver3` functions). Cannot be used with `'colordata'` option.
- `'colordata'` : each quiver is colorized with a 1-by- $n_q$  array or a handle function (it will evaluated in all vertices) (default : empty ).

The options of second level depend on the type of mesh elements to represent.

One can use any option of the following functions according to the type of  $d$ -simplex to be represented.

- In dimension 3 and with empty `'colordata'` , the `quiver3` function is used.
- In dimension 2 and with empty `'colordata'` , the `quiver` function is used.
- In dimension 2 or 3 and with no empty `'colordata'`, the third party `fc_tools.graphics.vfield3 . vfield3` function is used.

### 2D example

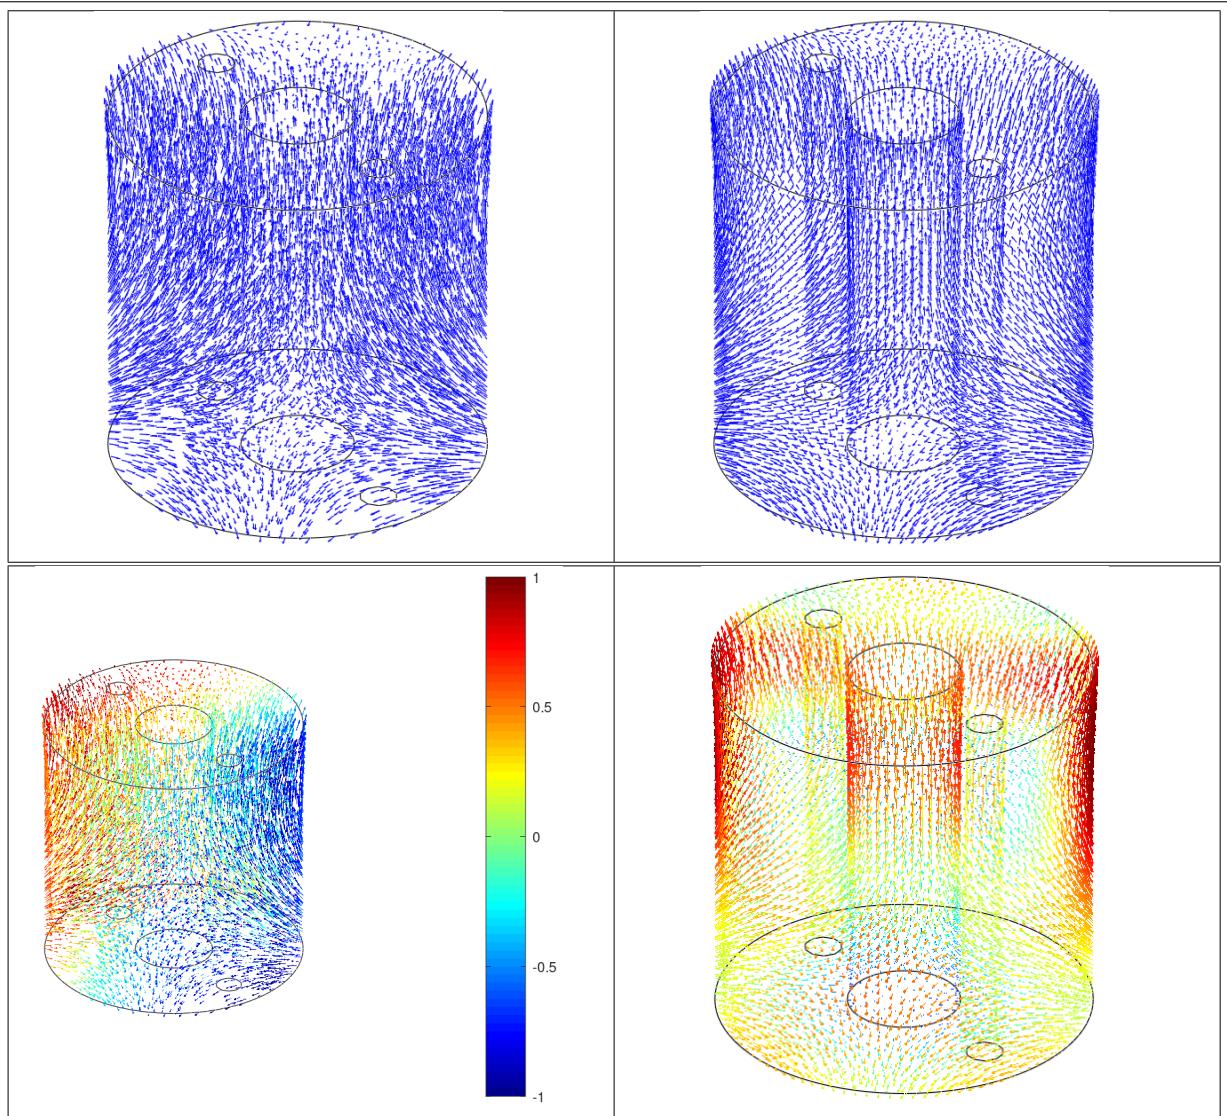

```

v=@(x,y) y.*sqrt(x.^2+y.^2),@(x,y) -x.*sqrt(x.^2+y.^2);
vv=@(x,y) x/5,@(x,y) y/5;
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMesh2D(2); % Select small mesh

Listing 15: 3D surface mesh : `plotquiver` function

## 11 `fc_graphics4mesh.scatter` function

The function `fc_graphics4mesh.scatter` displays data on nodes array q

## Syntax

```
fc_graphics4mesh.scatter(q,u)
fc_graphics4mesh.scatter(q,u,Name,Value, ...)
```

## Description

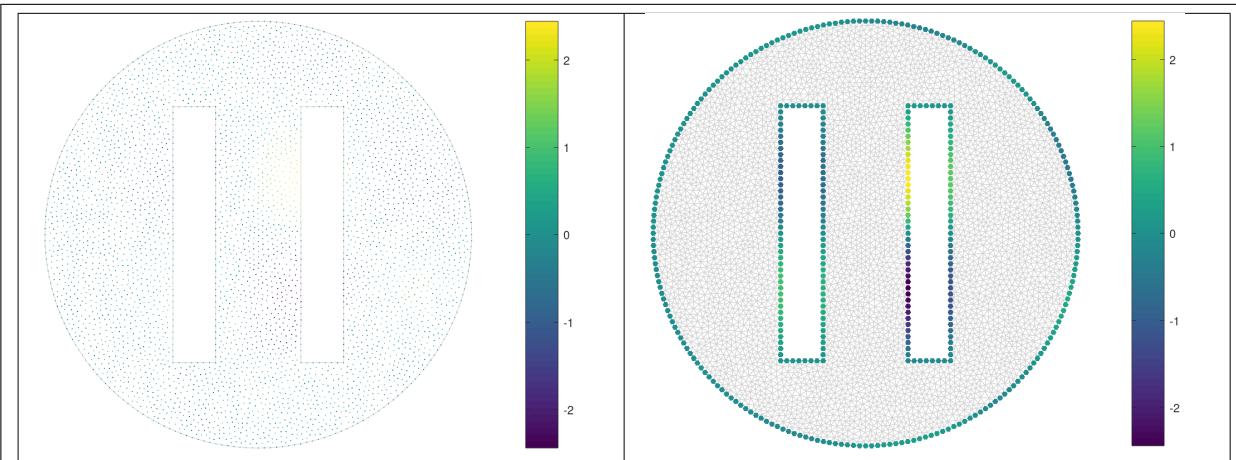

`scatter(q,u)` displays data `u` on nodes array `q` as colorized points. The data `u` can be an handle function or an array.

`scatter(q,u,Name,Value, ...)` specifies function options using one or more Name,Value pair arguments. Options of first level are

- `'MarkerSize'` : size of the marker. Default is 1.
- `'ForcePatch'` : if `true`, uses `patch` function, otherwise uses `scatter` function in dimension 2 or `scatter3` function in dimension 3. Default is `true`.

The options of second level are those of the function used (see `'ForcePatch'` option).

**2D example :** the following code is part of the `fc_graphics4mesh.demos.scatter2D` function.

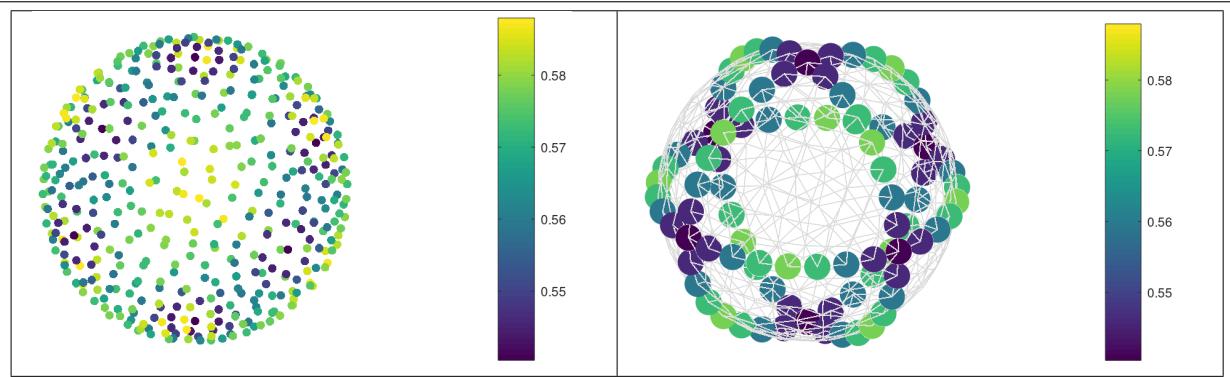

```
u=@(x,y) 3*exp(-((x-1).^2+y.^2)/10).*cos(x-1).*sin(y);
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2,false);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('2D',1,false);
U2=fc_meshtools.eval(u,q2);

view(3); axis image; axis off
caxis([min(U3),max(U3)])
colorbar

```

Listing 18: Using `fc_graphics4mesh.scatter` function with a 3D mesh

## 12 `fc_graphics4mesh.plotnodes` function

The function `fc_graphics4mesh.plotnodes` displays the nodes of a given mesh nodes array

### Syntax

```

fc_graphics4mesh.plotnodes(q)
fc_graphics4mesh.plotnodes(q,Name,Value, ...)

```

### Description

`plotnodes(q)` displays all the nodes of the array `q` with a specific marker.

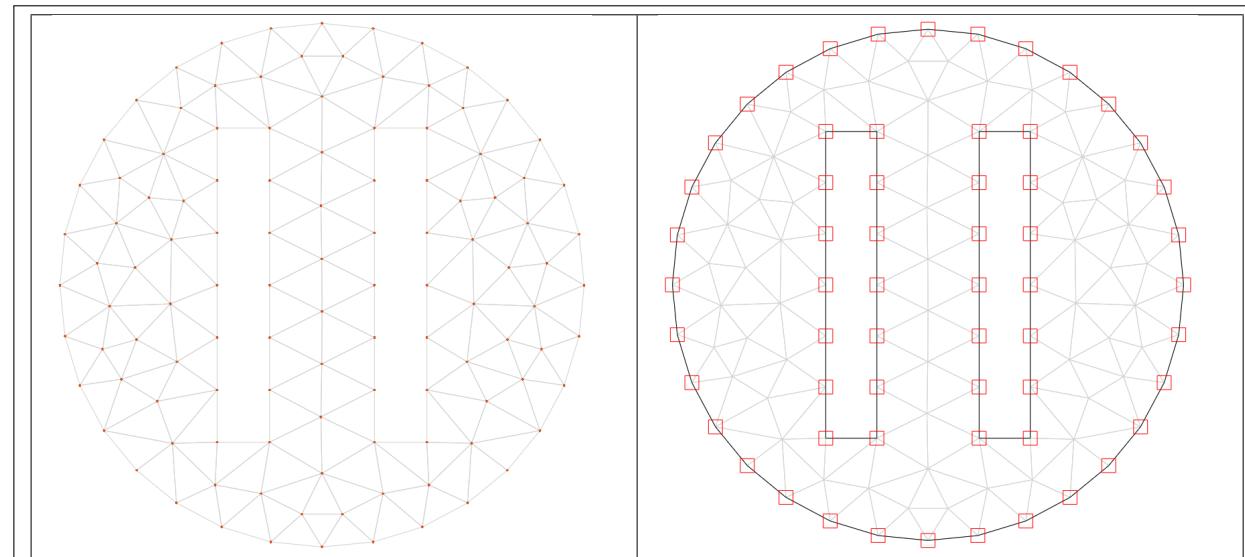

`plotnodes(q,Name,Value, ...)` specifies options using one or more `Name,Value` pair arguments. Options of first level are

- `'Marker'` : to specify the marker (default : `'.'`),
- `'MarkerSize'` : to specify the marker size (default : 6),
- `'idx'` : to specify indices of the nodes to be displayed,

The options of second level depend on the dimension :

- if dimension 2, then options are those of the `plot` function,
- if dimension 3, then options are those of the `plot3` function.

**2D example :** the following code is part of the `fc_graphics4mesh.demos.plotnodes2D` function.

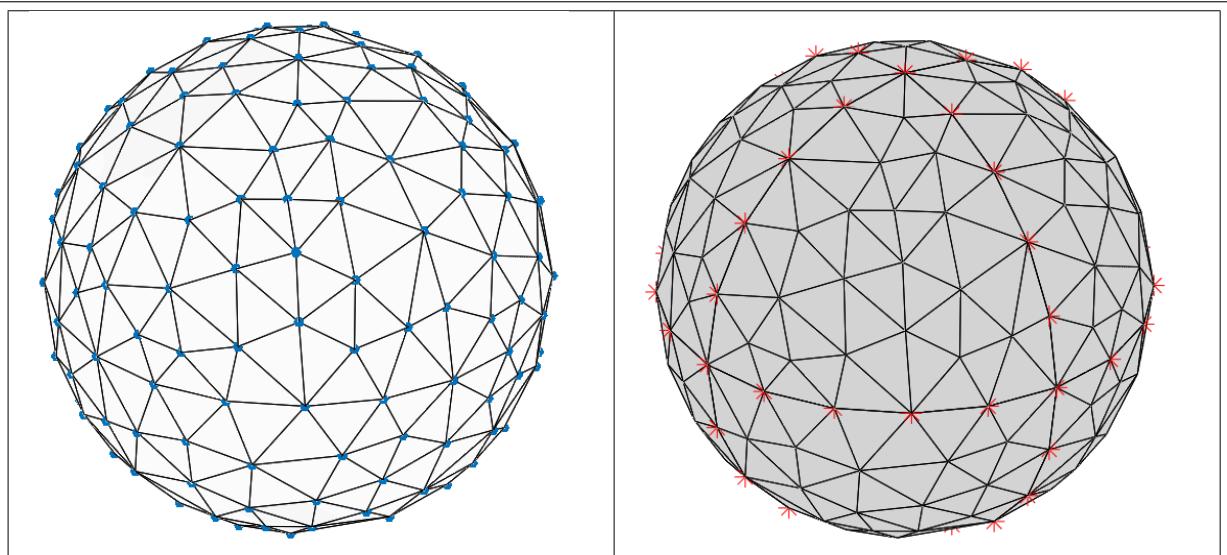

```
[q2,me2,toGlobal12]=fc_meshtools.simplicial.getMeshArrays('2D',2,true);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('2D',1,true);

```

Listing 21: Using `fc_graphics4mesh.plotnodes` function with a 3D mesh

## 13 `fc_graphics4mesh.plotnodesidx` function

The function `fc_graphics4mesh.plotnodesidx` displays indices of the given mesh nodes array

### Syntaxe

```
fc_graphics4mesh.plotnodesidx(q,  
fc_graphics4mesh.plotnodesidx(q,Name,Value, ...)
```

## Description

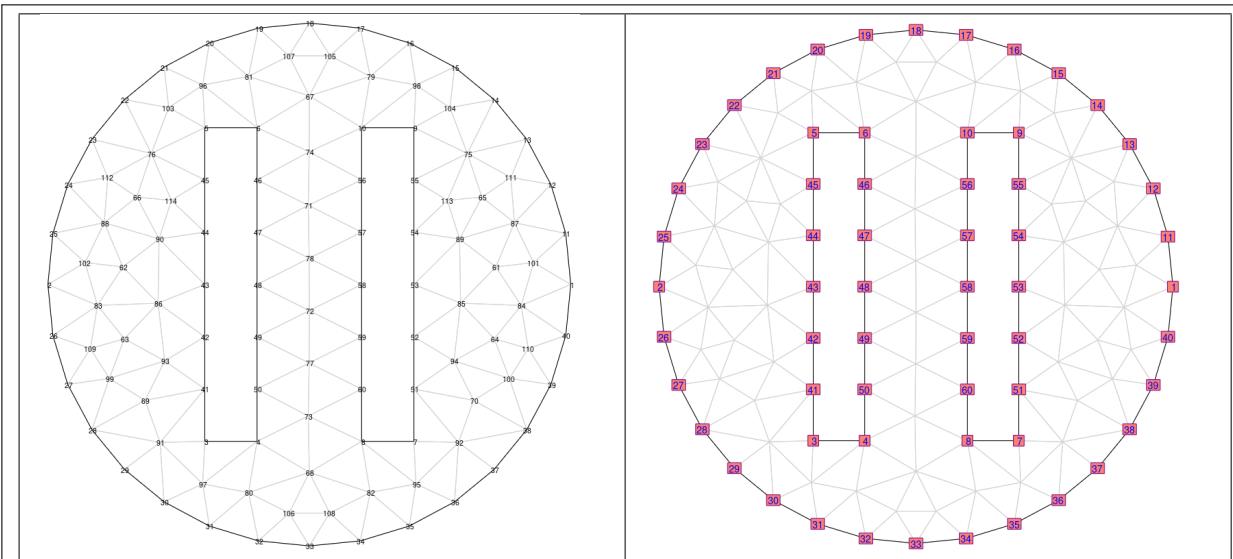

`plotnodesidx(q)` displays all the numbers/indices of the nodes array `q`

`plotnodesidx(q,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments. Options of first level are

- `'toGlobal'` : to specify other indices to display,
- `'idx'` : to select particular indices.

The options of second level are those of the `text` function.

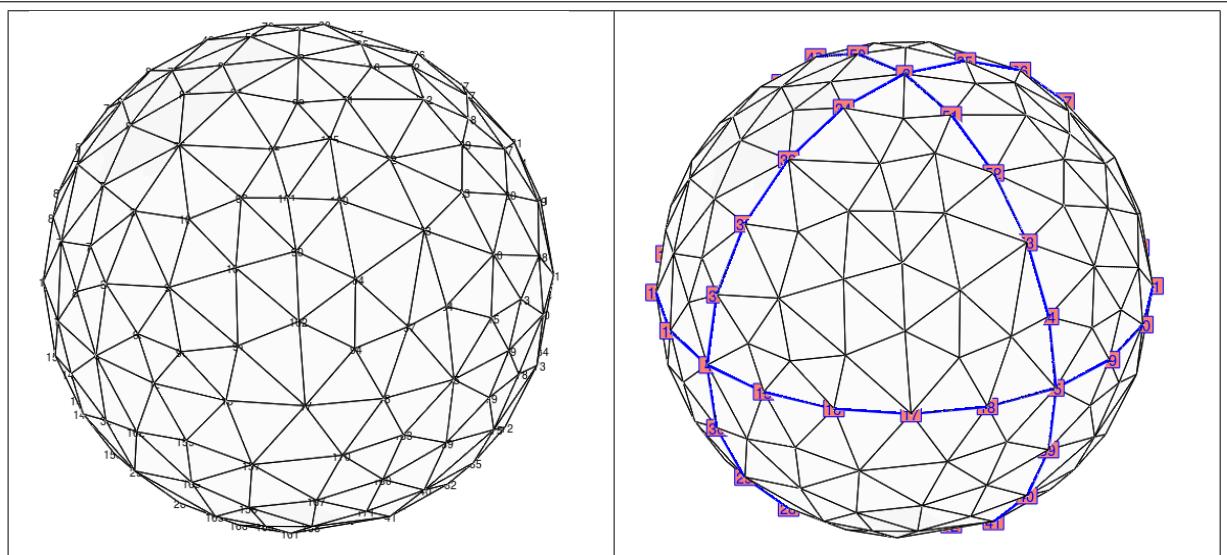

**2D example :** the following code is part of the `fc_graphics4mesh.demos.plotnodesidx2D` function.

```
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2,true);  
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('2D',1,true);  
figure(1)

fc_graphics4mesh.plotnodesidx(q1,'Color','b','backgroundcolor','Salmon','edgecolor','b','fontsize',7)
```

Listing 23: Using `fc_graphics4mesh.plotnodesidx` function with a 3Ds mesh

**3D example :** the following code is part of the `fc_graphics4mesh.demos.plotnodesidx3D` function.

## 14 `fc_graphics4mesh.plotelementsidx` function

The function `fc_graphics4mesh.plotelementsidx` displays indices of a given mesh connectivity array

### Syntax

```
fc_graphics4mesh.plotelementsidx(q,me)
fc_graphics4mesh.plotelementsidx(q,me,Name,Value, ...)
```

## Description

`plotelementsidx(q,me)` displays all the numbers/indices of the connectivity array `me`.

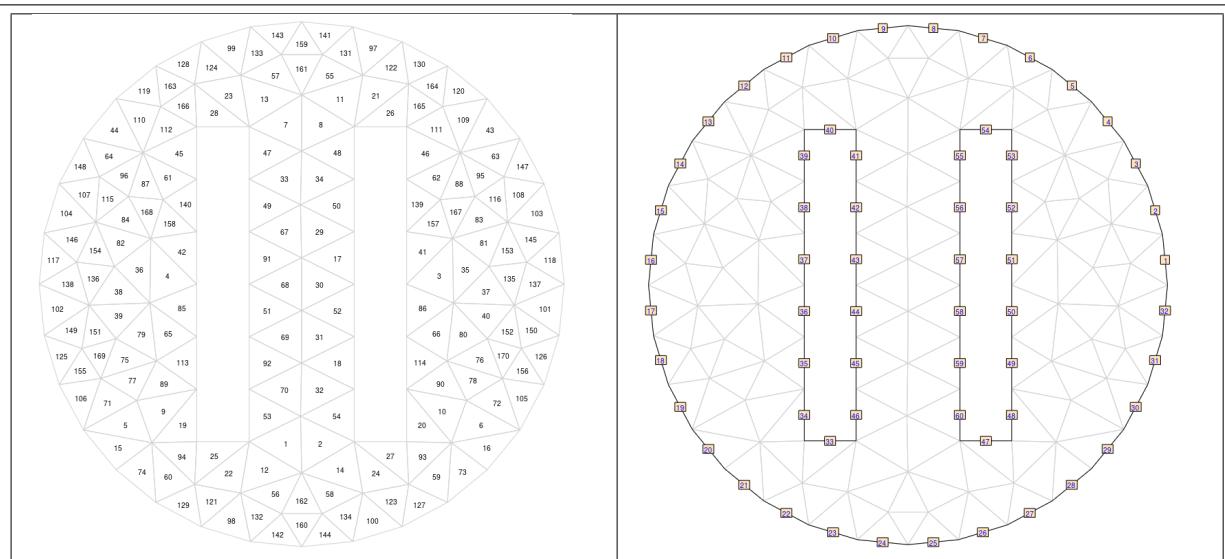

`plotelementsidx(q,me,Name,Value, ...)` specifies function options using one or more `Name,Value` pair arguments.

Options of first level are

- `'toGlobal'` : to specify other indices to display,
- `'idx'` : to select particular indices.

The options of second level are those of the `text` function.

**2D example :** the following code is part of the `fc_graphics4mesh.demos.plotelementsidx2D` function.

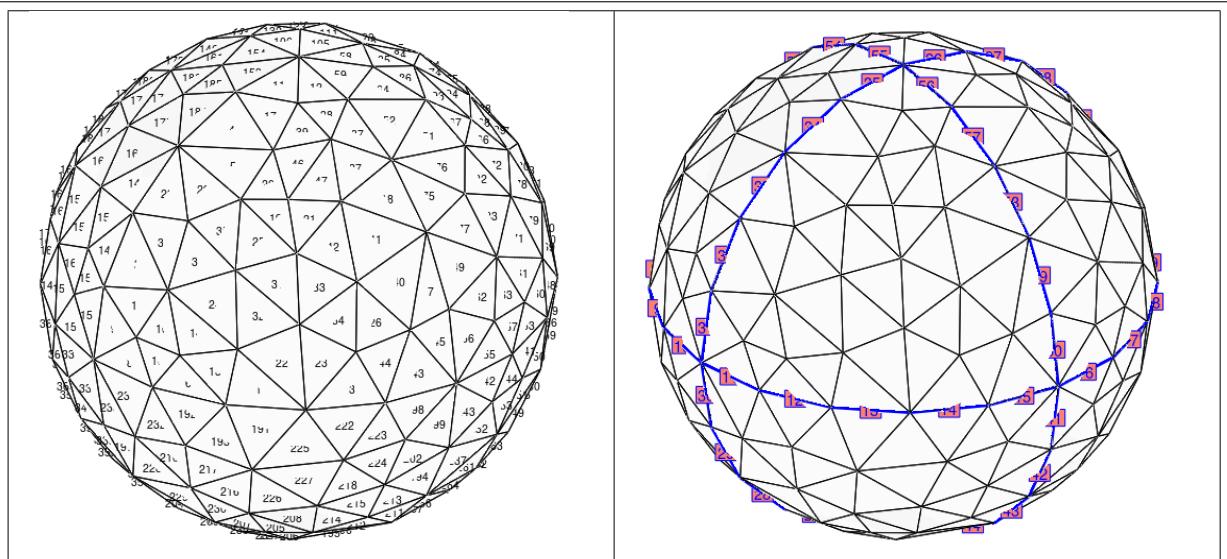

```
[q2,me2,toGlobal2]=fc_meshtools.simplicial.getMeshArrays('2D',2,true);
[q1,me1,toGlobal1]=fc_meshtools.simplicial.getMeshArrays('2D',1,true);
