

$$\partial \left(\text{Y-junction} \right) = \text{Y-junction with top vertex} - \text{Y-junction with bottom vertex}$$

The diagram illustrates the derivative of a Y-junction. On the left, a Y-junction (a central vertex with three outgoing lines) is enclosed in parentheses, with a partial derivative symbol ∂ to its left. This is followed by an equals sign. To the right of the equals sign are two terms separated by a minus sign. The first term is a diagram of a Y-junction where the top vertex is highlighted with a solid black circle, and the bottom vertex is an open circle. The second term is a diagram of a Y-junction where the bottom vertex is highlighted with a solid black circle, and the top vertex is an open circle.
